Same reason prices are different at different places on almost
everything. WHATEVER THE MARKET WILL BEAR!

Why is plain salt $1.69 at Kroger and .98 at WalMart?

Why is soda at retail pricing normally 21 cents for 12 ounces at a
store or $2.24 per gallon retail if you look at it that way. But at a
restaurant (who buys it wholesale also, just as the store does) why do
they sell it for over $17.00 per gallon? Any price over 99 cents,
which represents 1000% markup is extortion on soda products!

The first dealer is based in Canada and the second is in the USA

$599 Canadian = $446 US which isn't too far away from the $380 price that CHQ are selling at considering (I believe) a generally higher cost of living in Canada.

# 3786. FT Vectronics HFT 1500 for auto ant tuner

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-30 15:51:47 UTC
From: denton <denton@oregontrail.net>
Message-ID: <cbun0k$lgn$1@news.oregontrail.net>
Source record: 20688

I have for trade an older Vectronics HFT 1500 antenna tuner..these are still being made and sold for over 400 bucks new.
Mine is the older one with a delrin roller inductor.

I have also done some minor mods...have insulated the roller inductor from ground and shaft to control the rf current flow a bit better. I have re-wound the balun into a current balun configuration (1 to 1) for better balance for twin lead antennas.

I would like to trade for a MFJ-993 auto antenna tuner, or its equalivant.

My experience with the IC-2100H:

Had to replace a failing (25 year old) packet link radio.
Checked eBay, they were selling for $150 - $180 "New In Box".
Checked HRO, AES, etc. on the web.
Prices were $149 - $169 plus shipping.
Drove to Portland HRO, asked about price.
Store owner checked computer, looked at the big
pile of 2100Hs on the shelf, picked up a box, put it
on the counter and said "How about $135?".

Of course I bought some other stuff as well ;-)

>I suspect a problem of currency, but the dealer refuses to explain and keep
>a deep fog around its advertisings.
>Not smart. I prefer to go away, for example to CHQ...

Hi Thierry,

Manufacturer builds and sells (on average) to distributor (CHQ,
durhamradio, or Joe's Tap Dancing Academy) for $300. Manufacturer who
also advertises, offers MSRP (Manufacturer's "suggested" retail price)
or $599. This is only a "suggestion" but it establishes the "market
price."

Distributor #1 can sell for this price (customer pays the price
because that is what is advertised). Distributor #2 can sell for
more (customer tries to go to Manufacturer instead but is told to buy
through Distributor). Distributor #3 can sell for less (customer
abandons Distributors #1 and #2 like you). Everyone sells antennas
and is happy.

Soon Distributor #2 sells less than others and goes out of business
unless he has no bid contract to sell antennas for Halliburton.
Distributor #2 pays kick-back to Halliburton. Halliburton charges the
Taxpayer more money for "handling fees" and is twice as happy.
Congress over-appropriates funds for black project that Halliburton is
managing (for a fee) without oversight; and the price of the antenna
(on average) rises to $1200. $120 (10%) finds its way back into the
pockets of Republicans and they are happy. Instead of spending it to
generate local jobs, they put their money into off-shore investments
that are tax sheltered companies holding government contracts, and the
cycle starts all over again (happier yet).

Explanation: Capitalism (or the zero job growth economic boom).

Hello Gang,

I am looking for a Heath SB-400 Transmitter. It does not have to be in perfect condition but reasonable. I would trade looks over operation as I can repair it myself. I am trying to round out my vintage heath station and am missing this piece.

Let me know if you have one and condition and price.

I believe one thing that drives up the prices on all this mil grade equipment
is requirments for measured drawings so these things can be repaired or
replaced
when in service. For example on ship or sub there is machine shops to fix
things
or fabricate replacement parts.

If they put $ 600 toilet seats in b1 bombers, wonder how much the ones
in the White House or AF-1 cost ?

I know someone who used to work at Boeing. That $600 toilet seat came about because after the airplane was designed the Air Force came back with a requirement that necessitated (a) a total redesign of the whole interior of the aircraft or (b) narrowing the lav to the point where a stock seat from a 747 wouldn't fit anymore. $600 per seat was cheaper than ripping the whole thing out and redoing it.

The other thing that drives the price up on mil grade equipment is that there's not much of it made. When you are Ford and can count on making 100,000 cars a year you can spend a _lot_ of money on engineering, because it'll be divided by 100,000 when you figure the price of the car. When you're Raytheon and you can only count on selling 100 systems before you need to make something different it would cost the customer many more $$ to engineer the production cost down than it does to just build things stout enough to work without worry.

You're welcome.

It might be that the work location has a rule in their firewalling
that keeps one from getting in there.

# 3806. Wanted: Heath VF-1 front panel and dial

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-02 14:46:58 UTC
From: k5dh@qsl.net
Message-ID: <_uydnQRBSqT_6HjdRVn-hA@centurytel.net>
Source record: 20558
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Looking for a front panel and dial for a
Heathkit VF-1 v.f.o. Must be in nice
condition with no extra holes and all
lettering intact.

Thanks and 73,
Dean K5DH

## 3807. Is Kenwood sleeping?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-02 20:13:48 UTC
From: "Dutchm@n" <h@ns.co.za>
Message-ID: <S8WdnUlfHax0XHjdRVn_iw@is.co.za>

One of my rigs is a TS570S.
I expected Kenwood to put out a matching VHF/UHF
all mode and am rather disappointed.
Looks like Icom is the only choice such as the
IC821 or 910 as a companion.

ZS6KR

TS-2000 a very capable VHF/UHF/HF, SSB/AM/FM/PKT/RTTY/CW....did I miss anything....Oh yes and the birds. It also has a built in .5 PPM TCXO which you'll have to pay around $300 U.S. for in the IC-910. Nice to have that extra stability for tracking the birds.

You also need to install a mast mounted preamp for the VHF/UHF work when using the TS2000.

Just my opinion of course, but I think a lot of rig for the money.

| --
| Yes, the Kwd 2000 is OK for the money but surely a
more modular station is much more sensible - not all
in one small box as any breakdown stops all station
activity.
Secondly I prefer a rig that is ergonomic for thick
fingers and dont need to put on glasses to operate.

Your comments?

That reminds me more of the good old TCP/IP days in the North West - when NWPUG were never interested in anything apart from AX25 and FlexNet which can't even run on modern systems!

> Your comments?

Agreed. If you have thick fingers and or do not like menus and need glasses for reading like me then the Kenwood TS-2000 may not be your cup of tea. The buttons are quite small and a lot of them. The menu is extensive controlling a lot of features, in addition many of the front panel buttons are two function meaning you would sometimes have to push a function button then the button to get into an adjustment such as adjusting the processor level or mike gain ect.

Offhand I don't know what to recommend. I'm not too familar with the Yaesu or Icom, perhaps you will get some other comments.

it's getting hard to market vhf/uhf only rigs, given the
all-in-one-bucket mentality nowdays, aka the 706/857/ts-2000 etcetera,
etcetera.

is the 910 really better at vhf/uhf than the ts-2000? the 910 review
in qst was only so-so.

I have heard that Ham sales for Kenwood is sparse as well as other
manufacturers.
Will get worse with the decline of the solar cycle.
I know Hams who will not buy now until solar cycle picks up -- a long wait.

A Kenwood rep told me that their audio division was holding up the Ham side.

So a new flagship rig from Kenwood may not be forth coming.

They seem to be concetrating on the lower price range and the multiband all
in one boxes for sales.

But the question is does the performance of an all band box give the
performance of separates ???

Have seen the TS-790A all mode VHF/UHF base station for around $750 used.
Nice rig -- will accomodate 2m, 440, and 1.2 GHz but not 220MHz. However the
1.3 GHz module is pricey -- power at that frequency does not come cheap.

Having a backup rig would solve this problem. Keep your old rig when you buy a new one.

> Secondly I prefer a rig that is ergonomic for thick
> fingers and dont need to put on glasses to operate.
>
> Your comments?

Do the new rigs still allow computer control? That might help you. I've had my old (almost ten years old now) Kenwood TS870 externally programmed for years. Those dinky buttons are hard to see and when I first got the rig I sometimes hit the wrong one. But once I figured out how to program them to a computer keyboard no more problems.

BTW interestingly, the TS870 at almost ten years still does fine for me, but I have had to replace the computer 3 times just to keep up with what I need. Maybe that's why Gates is rich and Kenwood is suffering...

Hi guys,
Nice to hear your opinions and suggestions. There are
also some nice mobile dual banders like the TMD700A.

I wasn't even thinking of performance comparisons with
the TS2000 - merely operating practicality and
ergonomics because that's what counts here. Admittedly,
I am also guilty of putting an aesthetic aspect to it.

I also do VHF/HF(400W) relays on local Sunday morning
HQ and club bulletins so as to reach most of Southern
Africa. I go out on both frequencies at the same time
when I take the mike.
A VHF(Alinco DJ180 and HF rig(TS940) are hardwired
together with a home-brew switch-over box.

Thereafter our club bulletins the same way but with VHF
-HF and HF-VHF relay capability so everyone can hear or
call both ways. (This is legal in ZS)
This has worked well over the last 5 years and quality
has been fine-tuned to excellent.
No computer control, just a headset and switchbox.

Under normal conditions my personal preference is to
seperate HF and VHF physically and hence my query for a
companion to the TS570S.
There is so much more freedom with a modular station as
opposed to all-in-one buckets. However, it looks like
there are no new VHF/UHF dual-band base stations on the
horizon and we have to look backwards instead of forward
to obtain one. A converted TMD700A in base-station format,
internal supply and larger screen would also be nice.
Is Kenwood reading this?

Cleaning out the shack. Have the following items for sale, with pictures at:
http://mysite.verizon.net/vze7ugst/id1.html

Kenwood TM-741 dual-band transciever with remote head kit. Includes power chord, CD with TM-742 manual and 741 service manual. 2 Meters works well at 13.8 volts. Like other Kenwoods in this series, doesnt transmit well down around 12 volt. Also 440 RX sensitivity down a bit. Measured approx 1 uV sensitivity. This rig runs 45 watts on both bands
$300 obo plus shipping

Icom CT-17 computer interface with RS-232 cable, 12 volt transformer and radio plug. $70 plus shipping

Dish network model 3000 satellite receiver with valid smart card and all-in-one brand remote. $30 plus shipping.

R1 direct conversion receiver on 40 meters. Built in cabinet with room for transmitter. Nice vernier dial. $20 plus shipping

KLM 14 element circular polarized antenna. $50 local pickup only (Northern NJ)

10 ft TV antenna for VHF and UHF. Think it is a Weingard. $20 local pickup NNJ.

6 element 6 meter antenna. Hygain model 506? on 24 ft boom. $100 local pickup NNJ

15 element 2 meter beam. K1FO style on 22 ft boom. Needs some repair of U bolts and driven element. $40 local pickup NNJ.

Mosely TA-36 6 ele tri-band beam. $200 local pickup NNJ.

25 amp 13.8 Volt power supply. Commercial grade linear type. $30 local pickup.

10 amp 13.8 volt power supply. Commercial switching type. $20 plus shipping.

All units will not be DOA.

73,
Woody ak2f@qsl.net
My ham radio web site: http://www.qsl.net/ak2f/index.htm
Includes some good info on computer power supply EMI/RFI.

# 3844. FS: TS-850SAT-based station pkgs, antenna-tower pkg

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-05 13:20:44 UTC
From: David J Windisch <davidw@copper.net>
Message-ID: <40e955ec_2@newsfeed.slurp.net>
Source record: 20596

Hi, all concerned:

In order to down-size, but *not* to get out of hamming, I have two separate nearly-identical station-packages, and a single antenna package, up for sale:

TS-850SAT, 270Hz c-w filters both i-f's, hand mic, book, p.s., "MARS mod" from mods.dk
"50-million-plus" S/N

NCL2000 1KW-input c-w/2KW input SSB amp, with book, one spare NOS 8122, relay-soft-start mod

Ameritron QSK-5, book

Drake W-4 wattmeter

Low-pass filter

Johnson KW MatchBox, book, VSWR sensor

Coax patch cables to connect the boxes

**********
* "near-identicalities"*:

One station has a Kenwood PS-430 supply, the other an Astron 35A metered supply.

Ditto mixed InRad and Kenwood c-w filters, between which my old ears cannot distinguish any practical difference.

I'm fussy about the 20MHz clock oscillators being "on frequency", so I made tweaker-access-holes in the '850 side panels, in order not to have to remove the tops to set them while listening to WWV.

This dinosaur doesn't have a camera, so you'll please accept my assurances that none of the equipments is beaten up; however they do show the signs of my "normal use", eg, I rest my fingers on the tuning knob. You know what I mean. No sticking buttons, binding knobs, broken or sticky meters, and all pilot lamps light up.

I'll take the best offer above a grand, per station-package, and reserve the right to accept or reject any or all offers.

**********
I also have an tower-antenna package:

Heights 80-ft self-supporting aluminum tower, rotor shelf, 20-ft mast,
Create RC-5 rotator, CC X7,
*old* HyGain 2L 40M yagi, and a bunch of coax and rotator cable. All is at grade level, good to go.

I'll take the best offer above a grand for the tower-antenna package, and reserve the right to accept or reject any or all offers.

**********
I'm in Cincinnati, and plan to be at the Indianapolis hamfest on the weekend of the 10th.

Contact me at 513-674-7202 and pls be ready to tell me in which forum you read this ad.

**********
Disclaimers: No DOA, but used-as-is-where-is. Willing to ship what I can UPS-ground-insured, on buyer's nickel, and though I can't drive any more, I may be able to meet part way *if* I can get my son to help out with loading and driving the pickemup truck I gave him last year. I have good shipping cartons for all the radiostuff. The amps weigh in at over 80 lbs, tho. Will consider parting out if I am unable to dispose as packages.

Payment methods: cash, certified or personal checks, or combo are fine. I'll turn loose the goods, on complete clearance of all of what ever medium in which we shake hands and do business. Can't take cards or other methods.

Thanks for reading this far. I'm a ragchewer (silent-mic; they'll have to pry my Bencher outta my cold dead fingers).

73, Dave, N3HE

>Hello, i'd like to know the differences between the Kenwood TS-2000 sold in
>USA and the one sold in EU.

For details I suggest that you download the TS-2000 owner's manual
from Kenwood's amateur-radio web site. See pages 105-109.

The biggest difference I see at short notice are in frequency
coverage... not in the actual electronics (I think) but in what
frequencies the transmitter will agree to key up. For example, in the
U.S. model will transmit from 3.5 - 4.0 MHz and from 7.0 - 7.3 MHz.
The EU models will transmit only from 3.5 - 3.8 and 7.0 - 7.1 MHz.
Similar differences exist for other bands, as well.

The main and sub-receivers have some restrictions in the EU which
don't exist in the US model - the US model is more broadbanded.

>Can i use an USA specs model in the EU, and vice versa?

The spurious-emissions levels are identical, so I don't think you'd
have RFI/EMI issues.

I believe I recall that some EU areas have restrictions on the ability
to _receive_ signals outside the amateur band, which don't exist in
the US.

So... if you bring an EU model into the US, I believe it'll work fine,
but it won't be able to transmit in certain frequencies where U.S.
amateurs do have privileges, and won't be able to receive in certain
amateur and non-amateur frequencies permitted in the US. I don't see
any capabilities in the EU unit which would violate US law or
regulations.

In the other direction - a US model could allow an EU amateur to
either receive or transmit on frequencies where this is not permitted
by law in the EU. I don't know whether it's illegal to import-or-
possess a radio capable of doing this, or whether it's OK to have the
radio as long as you don't actually _use_ it in a way which breaks
local law/regulations. You'd have to speak with an EU lawyer to
determine this, or talk to a well-informed amateur radio group in
Europe.

Mr. Juan Lozano (XE2FLR),

You have committed fraud against Mrs. Thompson. She has tried every avenue possible to resolve the illegal reversal of payment that you initiated against her. This reversal has caused undue finical and emotional hardship on this woman. I feel the need to send this OPEN letter to you letting everyone know just what you did.

Mr. Lozano, we know English is a second language for you so I will break this down to ensure there is no misunderstanding while still being totally fair & honest with you and everyone else who may read this.

1. Mrs. Victoria Thompson who:

a. Is a registered eBay member, in good standings (eBay.com).

b. Is a Verified Paypal Member (Paypal.com).

c. Listed a Motorola Communications Service Monitor.

d. eBay Item number: 3817317151

e. View item at:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3817317151

f. Shipped item via United States Postal Service (USPS.com) with Insurance

g. Delivery confirmation number 0303 2460 0001 6669 1339

2. Mr. Juan Francisco Lozano-Rodriguez

a. Is a registered eBay member (XE2FLR)

b. Is a Verified Paypal Member. (xe2flr_@hotmail.com)

c. Bid and won auction for item number: 3817317151

d. Paid Victoria Thompson via Paypal

c. Paypal transaction ID # 8YY56447B7708882X

e. Upon receipt of the shipment confirmation number you reversed payment

Mrs. Thompson listed the Motorola Communications Service Monitor on eBay.com

You won the auction with a winning bid of $1,029.09USD with an initial shipping price of $30.00USD for a total price you paid of $1,059.09USD.

You made payment using your credit card thru Paypal.com. After a few days you asked Mrs. Thompson when she would ship the item. She responded that it would take a few days for her son to ship it because the unit is very heavy and she could not lift it. Mrs. Thompson's son sent the item using USPS.com and paid $40.00USD for shipping.

NOTE: The Shipping cost an additional $10.00USD, Mrs. Thompson was kind enough not to bill you the additional money for it.

After the item shipped you were emailed the delivery confirmation number. Mrs. Thompson who is new to eBay and Paypal purchased items on eBay and also paid for services using her paypal money. Upon receipt of the delivery confirmation number you reversed your payment to the unsuspecting Mrs. Thompson. (Your motives are unknown)

Mr. Thompson has notified You, eBay.com, Paypal.com and SquereTrede.com

You have responded telling Mrs. Thompson that the reversal was inadvertent and that you would correct it immediately and she should not worry.

You also contacted SquareTrade.com and told them to close the investigation.

The reason you told them: "I have resolved this with the other party." These are your exact words to them. The only problem with this is, Mrs. Thompson still has not been paid nor did you resolve issues with her Paypal account.

This matter must be resolved immediately!

You must pay her with a cashiers check for the full amount of $1,059.09.00

Thank you very much Dave.
I assume that's not possible to setup an USA spesc TS-2000 in EU specs
working on menus (like it's possible with some rtx, ie Yaesu FT-100d).

The cost of Kenwood TS-2000 in the USA is much lower than in EU, so i'd
really would like to buy it overseas...
But i'd like to have an EU specs model, if possible :-)

Thanks again,
Riccardo

I don't know if that's possible.

The band configuration of the TS-2000 seems to be controlled by a combination of factors. As with many radios, there are some surface-mount pull-up/down resistors which are read by the CPU at hard-reset time - these can be removed to enable wideband transmit and receive.

I suspect that the finer-grain control of the band access is controlled by the firmware. There may be different firmware versions for the US and EU, or the firmware might be reading another pullup/pulldown or a serial-number or region register to figure out what regional bandplan to implement. It _might_ be possible to load EU firmware into a US transeiver, or vice versa, but I'm afraid I have no details as to where or how.

Source record: 20606

Not everything is on the up and up; there are a few Scam Artists out there. For legal purposes, I want to make it clear, "I" AM NOT CLAIMING this guy mentioned (XE2FLR) as being one or guilty in any way as another has alleged - as I'm not aware of the whole case. If you read the groups enough, you'll hear of many who are ripped off. You can't blame E-Bay - least not entirely, though the system could be made a bit better. But then again, it's no worse there, than buying a used car with no warranty when it's said to run and dies pulling it off the lot. My opinion, no one puts a gun to one's head to make them bid/buy. So, if you're taken in bidding/buying, especially if the seller had many bad feedbacks posted, you're partially the blame for falling for it. As for sellers, if they're taken, then shame on them for sending items out before being paid. There is no 100% safe way to deal with anyone anywhere, even locally. You can arm yourself by doing any homework that can be done about the item, individual and so on. ANY gut instinct that says NO, should mean NO. You're getting it for a reason. READ the feed backs of both any buyers and sellers. READ ALL Neutrals as well as Negatives of both parties. You can often see or get a feel for who is right or wrong. If you're still not sure, DO NOT BID/BUY OR SELL then ship without bonafied funds being received.
Demand some sort of certified payment, U.S. Postal MOs or some Bank drafts of sorts, Pay pal, which affords "some" sort of protection. Make the statement that if they have negative feedback, you insist on certified funds if you're the seller or a paid by date or plain refuse to sell to them. IF they want it bad enough, they'll jump through the hoops.

Again, I'm not referencing in any way, the below captioned case as I know nothing of it. But the above notes are my own and I go by them when dealing. I've not been taken yet, buying or selling and if I ever am, then shame on me for letting my guard down. I "try" to watch for all the red flags. I read and reread the ads several times. I look at the pictures a couple of times. I try to find things wrong. Some are honest in their reporting of a condition of a unit, some are outright liars, or to be polite, their system isn't as accurate as the one most use. I've seen radios listed as in excellent condition, when the picture showed out right garbage. Maybe it was "excellent" - for throwing into the trash barrel.

There ARE a lot of gullible people out there. It is a shame they are taken, but it happens every day. Some shyster is just a cut above in smarts to pull it off.
It's a damned shame, but it happens. It isn't like it hasn't been known for a while. We all need to do our best to shut these ass holes down. If it ain't you that they're screwing, it could be your mother or someone else you care about. SCAMS are big business. Getting bigger by the day. Like shopping for a car locally or an appliance or whatever, smart shopping can make a difference. IF that item seems too good to be true, it probably is. There

are usually dozens of the same item on e-bay, so if you don't get it the first time, there will be another. PATIENCE is a virtue.

VALUE/PRICE is another one. KNOW what the item "should" be going for. Know what it sold for brand new - if possible. Check the price of one against the other. Usually, there are big differences. Knowledge is power. It can save you from a financial mistake. Also, IF you can NOT afford the item, then you can't afford to lose the cash for it, if it is trash. IF it is broken, know how to fix it, or pass it by. Chances are, you will need to fix something.

I'm not a professional by any means here, but these have all kept me in the 100% + range - buying and selling. The only negative I issued was for someone who did a buy it now, then failed to follow through. I intend to try to keep it that way.

Lou

It is.

Except when it isn't.

Nothing they can do to stop every bit of it.

They can (and should) minimize it, and they should make sure that
transactions are tracable enough so that legal action can be taken if
needed.

They need to monitor, and shut down anyone who does something
improper.

They should really work to make certain that scamsters cannot make up
a new name and get back on the system.

There are issues with differing jurisdictions.

Happy trails,

Yes, if the story is true, it is unfortunate the seller got taken.

I myself would not have done business with someone with only
three feedbacks for the $ 1,000 + test gear unless the buyer
wired my money to the bank directly so there would be a paper trail.

If he says no then fine.

I've been using the ebay for four years and not one gotten burned,
always try to deal with established sellers.

Both parties should set terms and conditions which they are
comfortable with. Do not depend on "the system" to protect you, but
make certain there is a paper trail for the transaction, and keep a
log of every step along with papers, and a record of all facts,
numbers, etc.

If anything about the transaction makes you queasy, reconsider dealing
with them. Whatever item you want will pop up on eBay again.

Happy trails,

| Hello, i'd like to know the differences between the Kenwood TS-2000 sold
in
| USA and the one sold in EU.
| Can i use an USA specs model in the EU, and vice versa?
|
| Thanks,
| Riccardo
|
|
Hi, Riccardo,

as courtesy to the group, i will answer in english.

A fellow HAM, OE8GMQ purchased a TS2000 through Gigaparts www.gigaparts.com early this year. there are, up to now, no known issues with the radio, and he is very happy with it. Some issues do arise with importing US models into EU, as they dont have the CE-certification. This only applies, when the item is SENT to you by the seller. If you take it with you after a visit in the US, Amateur Radio appliances are free of customs fees, but you have to pay for the applicable european sles tax, eg. 20 % in Austria, or 16 % in Germany, it is called Import Tax. On the other hand, you dont have to pay the sales taxes in the US.

As the price difference between EU and US is that great, (retail price US ~$ 1700, EU~ Euro 3000) it pays off to make a short trip to the east coast for the shipping fee (he paid 250 USD) and get you a nice week in NYC or anywhere you want for the rest of the difference.

Another fellow HAM OE8KDK went to the HAMVENTION at Dayton this year to buy a TS480. In comparision to buying the rig in Austria or Germany, he had a free trip to Dayton.

What I dont know about, but what you should consider is the warranty situation. If this is of importance for you,
you might have to take this into account when thinking about such a deal.

Good luck and 73
OE8SOQ
Helmut

Thank you Helmut, probably this is the biggest "problem" in case of an
international overseas buy.
I have to think about it.

Riccardo

From: W4PHM <W4PHM@ARRL.NET>
Message-ID: <tQFGc.4288$sD4.482@newsread3.news.atl.earthlink.net>
Source record: 20630

Good evening,

I have two new in the box, with manual and batteries
HTX-202s. They seem to be selling pretty high on Ebay
but I don't deal there. These rigs are true FM 2 meter
rigs that can put out as much as 6 watts under full
power with a 12 volt battery. I have included with them,
the RS Speaker mic that fits them and most Icom HTs
as well as the orignal 9 volt AA battery pack and the
7.2 volt newly refurbished battery pack.

Both rigs are a 10 out of 10 operationallly and aestheically
there is not a scratch on either one. 1 of the rigs has about
3 liftime hours of receive and about 30 minutes transmit while
the other has been used only enough to test its receiver and out
put.

Originallly I was looking for $110.00 or so per rig with me paying
the shipping CONUS.

If anyone wants to make me a fair offer on either or both let me know
and I will see what I will let them go for. Franklly I would not mind
keeping both of them but If someone wants to make a fair offer
below the original price, let me know.

Thanks for reading this post and best 73.

Patrick,
W4PHM@ARRL.NET

If anyone wants pictures and/or serial numbers let me know,
both are later production maxon rigs.

Postal money orders are OK BUT there are no guarantees that you will get your item
if you sell on a newsgroup. Been there done that. Got burned for $140. I have a friend who is a postal inspector
and says for a few hundred dollars it's not worth their time to prosecute. A postal money sounds like it's the best because of the protection.Well, that's wrong. Unless it is a LARGE amount.
Paypal is wonderful. NO WAY can a payment be stopped after it is sent. UNLESS,

If he sent an e-check to the PAYPAL account and she shipped before it was cleared, He could cancel it before it was cleared. You are supposed to wait until it clears before shipping! I myself once paid someone via paypal and made a mistake
with the amount, by a LARGE amount. I called paypal and they said there is nothing they can do at this point.
The return must come from guy who received the money from me. I e-mailed that guy and he sent
me the difference via paypal the same day.
Just my .02 cents with experience in postal money orders and Paypal.
Good luck!!!!!!!!!!

I hope members of this group can help me. I am in the Army National Guard and I am charged with setting up emergency communications for my unit. I need a transceiver that has a wide frequency range that can be issued to our civilian emergency responders for commo with our land mobile units (we cannot issue our military radios). I am looking for approximately 60 MHZ thru 500 MHZ.

Any suggestions?

Thanks!

I can go along with your idea. There really are NO guarantees. Even with pay pal - I've "heard" of people getting burned. If one uses a credit card, I suppose they could cancel the payment once they know you've sent the item - then make some lame excuse they never received it, as often, some packages are left on porches, etc without a signature to prove they were accepted OR sent to fictitious addresses. Yes, there is insurance, but it too can make for a pain in the ass to collect! OR something. SHREWD people have a multitude of ways to screw other people and the system. It would be grand if all those who ripped people off could be shot at sunrise, BUT..... we know that won't happen. Regardless what you do, you have to err on the side of caution. So far, "I" have been fortunate with Postal MOs and Pay pal. And all my sales have gone out either the same day or the next business day. IF there is any delay, I keep the party informed. I'd have to say, most of those who screw people are not in business. Those in business, wouldn't do that IF they intend to remain in business. And those who DO screw people, usually close up shop with in a short time. It's a matter of reputation. I value mine and "I" can't afford to "screw" anyone for just that reason. And anyone who has dealt with me can vouch for it. I don't make deals, then forget them. I keep a line open until the deal is concluded, even to make sure the item was received. I don't depend just on tracking. I check to be sure it arrived safely, which my packing has yet to fail. You don't find that personal touch with most. I keep a "mom and pop" shop approach. Service is lost today for the most part. "I try to keep it alive, at least so far as "I" am concerned with this business.

HI Lou, there are some dirtbags out there as we know.
I suppose they could cancel the payment once they know you've sent the
item - then make some lame excuse they never received it,
Paypal checks this out. If the seller does NOT have any proof of sending the
item then paypal usually returns the money from the sellers account. If the
sender has proper tracking info then Paypal won't refund the money. It was sent
and now would be a matter for the tracking police of the service used, but if
proved it was sent Paypal won't refund.

Not possible for the M-700 to operate at that low of frequency range.
No band pass filters, VCO, programming in the ram unit for 1.6 MHz.

# 3889. Yaesu Rotor Repair

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-08 03:53:44 UTC
From: Topaz305RK <2smoore@nemontel.net>
Message-ID: <96udnZGJgJoPWHHdRVn-uw@vnet-inc.com>

Anyone know of a rotor repair service, other than Yaesu, for the G-800SDX rotor. Have a unit in need of repair and after much searching have come up with nothing. Checked all the old favorites, Norms, Rotor Doctor (CATS), etc., none mention the Yaesu line of rotors.

Any help would be greatly appreciated.

"Advertise your business, and making money", that one down below sounded too good to be true to me at first. Then I said "what the heck is 20 dollars", and I started it with my own 20 dollar investment. Several month later I find myself in financial freedom, my own global online business is exposed larger and better thanever, because this is really a CHEAT-PROOF mailing list and advertising program which works. Please, read.

Costs only $ 20 USD one time investment, no additional cost ever!!!!

Here it is, very simple:

Other than many of the old illegal chain letters where you had to send money to up to 20 people, here you pay only one time to get added to a mailing list and advertising service for your business. It also incorporates the CHEAT-PROOF feature since you check with the person in position #1 whether he/she was paid.

You DO NOT have to send $ 20 to five, or more people, buy their reports or recipes or anything like that. Nor will you have to invest more money later to get things going.

THIS IS THE FASTEST, EASIEST ADVERTISING PROGRAM YOU WILL EVER DO.

Testimonial
IT'S OUTRAGEOUS!!! With two hours of work per day I have made over US$11,000 in the last three weeks... and my investment was just $ 20 !!! I LOVE IT!
Thank you,
Julie M. St. Louis
- - - - - - - - - - - - - - - - - - - - - - - - - - - -
ASK YOURSELF A COUPLE OF QUESTIONS:
ARE YOU IN NEED OF MONEY RIGHT NOW, AND GETTING YOUR BUSINESS EXPOSED AT THE SAME TIME?
HOW DOES $10,000 IN THREE WEEKS SOUND? Don't laugh! People have made even more with that. Try this for a change before spending money on worthless mailing lists, and/or other so called FREE services. We all know there is nothing like that.
**********
VERY IMPORTANT -LEGAL CONCERN-:

Global Marketing Newsletter Club: This service is 100% legal (Refer to US Postal and Lottery Laws, Title 18, Section 1302 and 1341, or Title 18, Section 3005 in the US code, also in the code of federal regulations, Volume 16, Sections 255 and 436, which state a product or service must be exchanged

for money received)
**********
Here's How It Works! Unlike many other programs, this advertising and mailing program is more realistic and much, much faster. Because it is so easy, the response rate for this program is VERY HIGH AND VERY FAST, and you will see results in two weeks or less! START RIGHT NOW! I

YOU WILL RECEIVE MANY MANY 20 DOLLAR BILLS VERY SOON! And you advertise your own off and/or online business. Because of the LOW INVESTMENT, SPEED,
and HIGH PROFIT POTENTIAL, this program is genius, and can be used worldwide! Again, just $ 20 one time expense: That's your entire investment!!!

PROGRAM STEPS Follow These Simple Instructions:

1) E-mail the person in position 1 and ask if they've been paid $ 20 by the person in position #4. Once you get a "yes" move on to step 2.

2) Send $ 20 to the person/address listed in position #2. That's it! $ 20 is ALL you pay, EVER! Include with the $ 20 bill a piece of paper containing your name, address, email address, and the words "Please, add me to your mailing list", and also add your own business no matter what it is. This is what keeps this program legal. You pay for a legal service to be done! Only the second person on the list gets your name and a 20 dollar service fee. You will receive an email from the person you send the $ 20 to, verifying that it has arrived. Then, move on to step #3!

3)Retype or copy this list, only removing the FIRST (#1) NAME FROM THE LIST. Move the other three names UP (#2 becomes #1, #3 becomes #2, #4 becomes #3, and ADD YOUR NAME to the list in the FOURTH (#4) position. Now the person you paid will be in position #1 and will receive e-mails from people asking if you paid him/her. Send out as many copies of this letter as you can!

THERE'S NOTHING MORE TO DO. When your name reaches the
second position in a few days , it will be your turn to collect your 20 dollar bills. By experience, 20 dollar bills will be sent to you by appr. 50 to 2,000 people or more, depending on your own efforts. That's all! There can be easily be a total of US $ 10,000, or more in your mailbox before you know it!
And your own business gets great exposure! EVEN IF YOU MAKE JUST MAKE A COUPLE OF THOUSAND, WOULDN'T THAT BE NICE? For a total of 20 dollars investment, what the heck.....
IF YOU DO IT, IT WILL PAY!

- - - - - - - - - TRUE STORY- - - - - - - - - -
Cindy Allen, a befriended Network Marketer from New Mexico told me: I ran this mailing list and advertising service four times last year. The first time I received over $7,000 in cash in less than two weeks and

over $10,000 in cash the next three times I ran it. I can not begin to tell you how great it feels not to have to worry about money any more! I thank God for the day I received this letter! It has truly changed my life! Do not be afraid to pay a $ 20 service fee for a mailing list and advertising service to strangers--they'll come back to you in ten-fold. So, let's keep it going and help each other out in these tough and uncertain times.
---
CAN I DO IT AGAIN? OF COURSE YOU CAN--- GO FOR IT! THE MORE YOU PUT INTO IT THE MORE YOU GET OUT OF IT. I join it each time I have a new request to join. Each time you run this program, just follow the steps above and everyone on your existing mailing lists benefits!

Simple enough? You bet it is! Just please, follow the rules and the $$$ will come to you! HUGE!

- - - - - - MAIL YOUR $ 20 BILL OUT TODAY (of course, not before you have confirmation from #1 that he/she was paid)- - - - -

To recap:
1.) email person in position #1 to make sure they were paid
2.) Send your $ 20 and await your confirmation email
3.) drop the person in #1 position from the list
4.) move the rest of the people of the list up
5.) add your own information to position #4
6.) start collecting within days

HERE IS THE CURRENT LIST (don't forget to ask person in #1 if they really received $ 20 from me, send your $ 20 bill to person # 2, move list up as described above, and put yourself in position # 4, then start sending out emails)

> thru 500 MHZ.

There are a number of rigs, such as Icom's IC-706 Mk 2G that'll work with very minor mods (see http://www.mods.dk/) but you'll run into legal complications. Your frequencies are assigned by DOD but Ham and civilian emergency teams get theirs from FCC. We have the same problem working with a base in my county - Our RACES Team cannot legally transmit on local Gummymint frequencies (rigs not type accepted by FCC) nor on the bases military frequencies and nobody'll say "sure, go ahead" cuz it's easier and safer to say "NO!". The base fire and rescue folks can't talk to the local sheriff, fire or EMT squads. AFAIK nobody's gone to the can for doing it yet but ???.

## 3894. Kenwood transverter

Message-ID: <2l52iiF8k2tlU1@uni-berlin.de>
Source record: 20647

Hello, i use my Yaesu FT-100d for digital modes and, unfortunately, i've verified that DSP filter are acive only on audio output (speaker or headset), but NOT on signal output pin #5 present in DATA jack.

Would be nice to be able to use DSP filtering also for digital modes, on DATA connector...

Any suggestion to obtain this useful feature ?

The possible alternative would be to use "spkr out" signal, but if possible i'd like to work only on DATA connector...

Thank you,
73 de Riccardo IK5WQO

Kenwood TS-2000 can be controlled by a computer, but as far as I know,
only the "blank face" version comes bundled with the software.
Otherwise, you must purchase it. I have a blank face TS-2000, and my
friend with a normal face version thinks it is actually easier to
control the unit with the software than via buttons and knobs.

# 3897. Any info on WJ-8690 Receiver?

Newsgroup: rec.radio.amateur.equipment

Does anyone have any info (i.e. band coverage, features, rs-232 command set, etc.) and/or know where I could find a manual on a WJ-8690 Receiver. I've done a web search, and have come up blank. This unit isn't even listed in the Watkins Johnson product list (on the the premium radios website). There is a surplus reseller that has some of these available (and they look kinda interesting), but he has no info whatever on them.

-Thanks!-

Looking at the Kenwood site (http://www.kenwood.net ), there is
something called "Memory Control Software" which can be downloaded for
free. Since I don't have a TS-2000, I didn't download it. The manuals
for the TS-2000 are there, too.

Downeast Microwave (http://www/downeastmicrowave.com ) has all that
sort of stuff, both in kit and ready made. I have their 2 meter
transverter and it works great with my TS 520. They have instructions
for interfacing with all types of transceivers. Their prices are not
low but they produce a very, very good product.

Jeff

As I understand it, the easiest way to get aced by PayPal is
to have the seller send something worthless, but get a proof of
delivery.

According to PayPal's policies, at least a couple of years
back, they would not recover payment if you had a delivery receipt
even if you sold a radio and shipped a box of rocks. I suspect the
only way around this would be if the seller required a receiver's
signature (unlikely) and the receiver withheld the signature until
after the package was opened and verified.

# 3904. People that fix older Kenwoods (TS-450) ???

I just had a radio, a Kenwood TS-450S get hurt by an indirect lightning strike. Must have come in through the ground wire, since the antenna was disconnected, although the surge protector may not have worked. Anyway, it seems to have minor damage, in that it has no receive audio, and the VOX stays anabled all the time. It seems to Transmit ok from what I can tell. I would like to keep this as a good backup radio, since it looks nearly mint, and worked great until 3 days ago. I checked with the International Radio people in Fla, and they appear to be a part time business, since they did not reply to my E-mail and did not answer the phone when I called. I would think that a TS450 is old enough that parts are maybe getting a little scarce? Manufacturers do not seem to support radios like they used to. I was going to buy a FT-920, but looks like they are not made anymore.

Hello,

My Yeasu FT1000D has no RX on the SUB-receiver until ... i touch the coils
from the RF-section T1028 and T6001 in the SuB-RXsection.
The same is that on D 1060 on the RF-section.
The RX on the sub is then coming back.
Between T1028/D1060 and T6001 is a bleu coax-cable.
I checked the bleu cable who connects the SUB-RX section with the RF-section
but that cable is OK.
I checked relay 1004 on the RF-section but is OK.
Main-RX is 100% .
Do someone has a solution except to bring it to the repairman ( He is on
holiday,HI)

take it out and look carefully with a magnifier for cold solder joints
on the foil side or where ever there are solder joints. Otherwise I
don't know unless it may be a oscillator not running until you touch
something.

Good luck.

# 3913. Drake TR-4C -- need advice -- PTT not working

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-09 15:15:39 UTC
From: k5dh@raytheon.com
Message-ID: <vEyHc.1$jd1.0@dfw-service2.ext.ray.com>
Source record: 20515
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I recently bought a Drake TR-4C / RV-4C / AC-4 station
which came from an estate. The gear is nice and clean
and appears to be 100% stock.

After I rebuilt the power supply and replaced a couple
of tubes, the station is operational with the exception
that I have no push-to-talk (PTT). VOX works fine on CW
and SSB. I replaced the 6EV7 tube, and that didn't help.
I tried two different microphones and got the same result
with both of them. Both mics work fine with my B-Line,
so it's not a mic wiring or switching problem. Before I
dive in with a voltmeter, does anyone have any suggestions
on what may be wrong, perhaps based on personal experience?
And yes, I'm aware that the CW key must either be closed
or unplugged for PTT to function.

Thanks and 73,
Dean K5DH

If you are set for SSB operation and plug a key in, does closing the key
transmit?

I would start looking at the CW key jack and the microphone jack and
the associated wiring.

Nope. Closing the key yields a momentary click of the T/R
relay and that's it.

My world band receiver, Sony ICF-SW55 is acting up. When you power on, it goes into a short calibration procedure and then the radio comes on. Lately, it goes into CAL (displayed on screen) and then shuts off after about 20 seconds. It started doing this from working one day and not the next. Does it on DC power or batteries. Have tried reset button many times. Does anyone have any help or comments? Thank you!

Unless I am wrong, a Zetron 37 is a Repeater type control unit. That's all I know of that Zetron makes along with other like products.
I'll have to look in my distribution books to see if the model is still available. I haven't checked that sort of equipment out for a while.

John - or anyone else who checked eBay,
Did you experience difficulty when selecting ham radio where the
screen would start to load, then start over and over and over several
tmes before 'settling in' on the page?

Howard

Hello Dean, I am presently restoring a TR4 and just finished checking
out the mic circuit..On the side of the TR4 you find the first jack
is phones, second one is mic,take a clip lead and short the mic
connector key wire(tip of connector) to ground,it should key up the
relay...tube V19B 6EV7 is Vox tube,it works for Vox and PTT,if vox

works PTT should work also...look at first grid of V19,pin 2,move to left to junction of R142,R105 and R108 ,key this junction to ground with test lead,relay should close..Also notice the three resistors connected to pin 2 are high value 1M, 3.3 M & 6.8 M..Hi value resistors will always go bad with age,take them loose and check them with good meter,if they are over 10% hi change them..Be glad to help if I can , call on phone if you need to... Your old Raytheon friend Harold W4PQW

That may be due to the way that your browser works.

eBay seems to love to send their pages as a bunch of HTML and images, in which the HTML code that invokes the images does _not_ prespecify the actual size of the image and thus doesn't specify the actual layout of the page. The full layout can only be known (actually, computed "on the fly" by the browser) after all of the GIF or PNG or JPEG images is fetched from eBay's servers.

If you're using a browser which tries to render pages "on the fly" as the HTML and images are downloaded, then you will often see the browser make several partial attempts to render the page. At several points along the way, it'll download another image file, "see" the size information for the image which the server returned, say to itself "Duuh, the page layout I computed is now obsolete", and go back and re-render everything.

I used to see this happening all the time with the older versions of Netscape. The rendering engine in Mozilla and Firefox (I believe it's code-named "Gecko") is savvy enough to avoid most of this partial prerendering - as soon as it "sees" stuff in the page's HTML which it "knows" is likely to result in on-the-fly layout changes, it stops rendering until all of the necessary information has been downloaded from the servers.

I don't know how well (or how badly) eBay's pages affect the renderer in Internet Exploder, as I use it almost never.

Thanks Dave,
Thought it might be the browser, though oddly this only happend on the
amateur radio category and no others. I am using Mozilla 1.6 and
therein the anser may lie.

## 3934. WWVB - date?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-10 20:44:59 UTC
From: Allodoxaphobia <bit-bucket@config.com>
Message-ID: <slrncf0lci.4qd.bit-bucket@walnut.config.com>
Source record: 20536

Huh? My WWVB clock informs me that today is "7-11 SU".
The hh:mm:ss is accurate -- just the date is wrong.

Can anyone with another WWVB clock confirm either proper
or improper operation in the time signal(s)

tnx es 73

Batteries!! Several of you suggested *that*.
Well, DOOH! It never occurred to me!! HI!HI!
After all, it was an Xmas present from my wife -- Xmas of
2001, IIRC. The batteries are/were the original "Pacific
Rim" AAA's that came in the package...
That probably was it. I just changed the batteries -- I'll
see if it locks up and sync's up with WWVB overnight.

I guess I was just waiting for one of the LCD segments to go dim
to tell me the batteries needed changing. I guess _I_ was dim.

Silly me for thinking NIST had a problem!

tnx for the replies,
Jonesy

Consider yourself lucky - you live right in WWVB's back pocket.

I don't get enough signal in my semi-underground comm center / ham shack (reinforced concrete walls up to 3-1/2 feet above the floor) for a WWVB clock to work. I've spent three years trying and finally gave up. Anyhow, they don't make them with the kind of face (marine silent periods) that I want.

<< I
need a transceiver that has a wide frequency range that can be issued to
our civilian emergency responders for commo with our land mobile units >>

SNJR-

I think you will never find a non-military radio that covers the range of your radios. Radios such as the Icom 706 do it in pieces, not continuously. (Chances are you could buy a house for the price of one of the military radios!)

I suggest you pick a "standard" frequency range and mode, and go from there. The Army can go to the emergency responder's frequency when needed.

For example, you might choose military frequencies in the 135 to 150 MHz range. There are commercial NBFM radios available for use there, although they are likely to be on a different sub-band than those for civilian (non-Amateur) communications.

There is another government band in the 400 to 450 MHz range. In either case, the radios may not be as common as the versions for other civilian use, but if you are paying the bill, you can get what you need.

Now, take the situation where you want to communicate with someone NOT on a military frequency. The local Civil Defense may be on U.S. Government frequencies, but the Sherriff and Highway Patrol won't, and are not likely to want another radio to carry along. In these cases, you need to ask them!

The first thing that came up on a Google search was Murphy's Surplus
(Mike Murphy). He prefers e-mail instead of phone calls.....give
him a shout. He may even have service information on this unit.
Somewhere in my archives, I've got an old WJ catalog, and I believe that
this receiver is in there, along with several others.

Gear for sale

Hi, all concerned:

In order to down-size, but *not* to get out of hamming, I have the following gear up for sale:

Two Kenwood TS-850SAT's, one hand mic (I'm a c-w man; even one mic is one too many, hi), use and svc manuals, "MARS mod" from mods.dk, "50-million-plus" S/N on
both. I'm fussy about the 20MHz clock oscillators being "on frequency", so I made tweaker-access-holes in the '850 side panels, in order not to have to remove the tops to set them while listening to WWV. $675@ + ship

Two NCL2000 1KW-input c-w/2KW input SSB amplifiers, with manuals, relay-soft-start mod $650@ + ship

2 NOS RCA 8122 spares for NCL2000 amp $225/pair

Two Ameritron QSK-5's, books $150@ + ship

Two Drake W-4 wattmeters $70@ + ship

Two low-pass filters toss in w/rig

2 Johnson KW MatchBoxes, books, VSWR sensors $350@ + ship

One Kenwood PS-430 supply, book, scratch on front $85 + ship

One Astron 35A metered supply $75 + ship

One Kenwood YG-455CN-1 270Hz c-w filter $60 + ship

One Kenwood YK-88CN-1 270Hz c-w filter $60 + ship

One InRad IR-455H250 250Hz c-w filter $60 + ship

One InRad IR-88H250 250Hz c-w filter $60 + ship

One InRad #94 8830KHz 2.1KHz SSB filter $60 + ship

None of the equipments is beaten up; however they do show the signs of my "normal use", eg, I rest my fingers on the tuning knob. You know what I mean. No sticking buttons, binding knobs, broken or sticky meters, and all pilot lamps light up.
**********

Heights 80-ft self-supporting aluminum tower, 26ft-sq wind load, rotor shelf $1500

20-ft mast, 2" OD X 0.250 wall $100

Create RC-5 rotator, 100ft cable $350

CC X7 $400

*old* HyGain 2L 40M yagi we need to talk ;o)

Five 100ft runs of RG8-type low-loss coax cable $100/lot

All is at grade level, good to go.
**********

I'll take the best offer on any of the above, and reserve the right to accept or reject any or all offers.

Disclaimers: No DOA, but used-as-is-where-is. Willing to ship what I can UPS-ground-insured, and though I can't drive any more, I may be able to meet part way *if* I can get my son to help out with loading and driving the pickemup truck I gave him last year. I have good shipping cartons for all the radiostuff. The amps weigh in at over 80 lbs, tho.

Payment methods: cash, certified or personal checks, or combo are fine. I'll turn loose the goods, on complete clearance of all of what ever medium in which we shake hands and do business. Can't take cards or other methods.

Thanks for reading this far.

# 3962. YAESU FT-5100

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-12 03:58:52 UTC
From: jeyoung@sympatico.ca
Message-ID: <e859bf76.0407111958.72c72acf@posting.google.com>
Source record: 20464

Hello,

does anyone know if the Yaesu FT-5100 and FT-5200 are the same radio?
I know one has a removable faceplate. I need to know if the basic unit
is the same inside.

Any ideas where I can find a Service Manual for the FT-5100
specifically? (I've been watching eBay, but no luck).

Thanks,
John

# 3963. For sale, YB400PE & Palstar AA30.

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-12 08:34:48 UTC
From: ken chattenton <k.chattenton@btopenworld.com>
Message-ID: <cctif7$sr2$2@hercules.btinternet.com>

HI all,
I have for sale the following,

One Yachtboy 400PE World radio.
One Palstar AA30 Active antenna.

The 'YB400-PE' is in 'as-new' condition with all documentation and original packaging.
It's priced at £50.00 plus post, or checkout/ collect ( North East UK ).

The Palstar Active antenna is 'as-new' but I don't have the original box or the instruction sheet any more...price, £25.00 plus post, or test/ collect.
If both items bought together then the price will be, £70.00 plus post if required.

Please email off-list if interested.....cheers, all, Ken, G4KIR.

# 3964. New Program - XTL_SET.exe

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-12 15:45:27 UTC
From: Reg Edwards <g4fgq.regp@ZZZbtinternet.com>
Message-ID: <ccubmn$on5$1@titan.btinternet.com>
Source record: 20466

New program XTL_SET.exe

About 60 kilobytes.

This program is both practical and educational. It is based on two loosely-coupled tuned circuits. There are several applications. The circuit of a 'crystal set' is illustrated. Tuned circuit L and C settings and the coefficient of coupling between the two coils can be varied from the keyboard while observing how signal power and voltage levels change at several points during a tuning-up operation.

The signal source is a broadcast transmitter of adjustable power output which radiates a groundwave. The radio path distance and ground path resistivity are also adjustable. A simple inverted-L receiving antenna of given length provides the signal for the receiver.

Download XTL_SET in a few seconds from website below and run immediately.

> just another bootlegger..........

Did you ever consider that 4 megs of bandwidth is the same allotment as 6 and 2 meters?
A 2510 or a 2950 make great radios to feed a transverter.

Also, CB linears can be used on 10 and 12 meters.

You should talk to folks on the radio, instead of hiding behind your monitor.
You don't have to leave your cage for that, either.

# 3966. HP Spectrum Modules Available...Parts Only

Newsgroup: rec.radio.amateur.equipment

I'm taking a shot in the dark as I know some of these groups are not on this topic but I've struck out so far on getting ops info on the Tek 2722A Sweep Receiver. I got it at the Williams AZ swap and it seems to work! At the motel in Williams it picked up the and displayed the cable channels leaking using a coat hanger as an antenna and it did the same at 2 other locations. I'm striking out in trying to figure out how to confugure it so that it becomes more useful. So if there are any cable guys out there who can help with basic ops or point me to info, I'd sure appreciate it.
tnx

>
>Owen KB5XE >>>>>>>>

Owen,

The FM unit EX-257 only provides FM in the current frequency range of
the R-71 / A It does not add 144 to 148 MHz or any more frequency
range to the receiver.
So the best it will do for you is let you listen to 10 meter FM on the
R-71 / A

Wouldn't take one if it was free. They are J-U-N-K.
The manufacturer says it's all in the installation. Trouble is, no one has
ever found out what the parameters of this mysterious "installation" are
that will allow this piece of junk to put a signal on the air.

Hi Walt,

The TR-4C uses a 6EV7 instead of the 6FQ7 used in the
earlier models. Thanks for the help attempt! :)

73,
Dean K5DH

Hi Sarge,

He got $ 3,000 for it, not sure if he will ever see the cash...

I do like the square D double pole main breaker on the lower right of the
case.
At least it looks clean on the outside.

I think he should offer a trailer with a genset as an accessory !

Standard C568A 95%+ with extended range mod. $185

Icom 02AT with wall wart.
Icom BC-35 plus extra Ice brick battery $ 65

Icom IC-229H 90% $ 85

Icom SM-8 Like new. $100

MFJ-1272B Set up for the IC-229H $ 20

Maha MH-C777 Universal Charger-Conditioner LNIB $ 25

Dynamic Communications
Model A470-25 $ 20
Sold as is, no manual.
Model 10-0 $ 20
Sold as is, no manual.

Carver Mobil Audio Amp 95+%
Model M-2120
$ 75

All items will include manuals unless noted.

I have a lot of older computer parts/MOBS-CPUs/boards
ect. Everything from Rll,MFM to SCSII controllers.
contact me for what you are looking for.
I have an External Scsii CdRom changer that uses Pioneer
carts.

I also have a lot of C64's 3 good 3-5 fixable or parts.
Including a portable with screen that is fixable.
Assorted peripherals - drives,printer,parallel/serial ports,
modems, tape drive, graphics pads, joysticks, ect.
A lot of cartridges, and software - games to productivity.
Included are extra books for programming ect.
Plus software to run a bbs from the C64..

I would like to sell it all as one group. Will cost more,
if sold piecemeal....

$150 takes it all on the C64 equipment.

Shipping is NOT included

# 4012. Drake L-7 Linear parts

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-14 23:04:50 UTC
From: Walker <Walker@nospamnowhere.com>
Message-ID: <1407200416045531 95%Walker@nospamnowhere.com>
Source record: 20359

I have a Drake L-7 linear that has blown the "printed circuit board" capacitor C-41 that is across part of the RF choke RFC 4. This choke sees the total amps drawn by the linear as it is in series with the HV input from the P/S and feeds the two 3-500 tubes. However, I don't know what voltage rating a commercial part would be for a replacement, and if it could be obtained. Someone has recommended at least a 5KV rating.

Anyone have any ideas on a replacement??? Also maybe I could make one from some double sided glass PC board I have here. The cap in the linear is 1 inch by 3 inches in size. There is also another one of the same type, but much larger hanging off the "load" variable capacitor. It seems to be in good condition.

I have found nothing else in the linear that looks bad or measures bad.

So it looks like the C41 cap failed and took out the 0.82 ohm resistor in the P/S HV lead. At least I hope that is all that is wrong. Appreciate any thoughts anyone might have on this subject.

Harold, N3HP

# 4013. Re: Drake L-7 Linear parts

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-15 01:17:07 UTC
From: k9sqg@aol.com
Message-ID: <20040714211707.04247.00001170@mb-m26.aol.com>
Source record: 20360

Harold,

You have a problem somewhere else. The capacitor failing cannot take out the 0.82 ohm resistor. Whether that capacitor is in the circuit, shorted, or open, it has no effect on the current drawn from the linear, thus that resistor is unaffected. It is possible, however, that you had a parasitic oscillation, or perhaps something shorted the capacitor to ground (dust, spider webs, or who knows what). There is not a lot of dc voltage across that capacitor. If there were, the section of the RF choke in parallel with it would fuse open. RF voltage is another issue. At any rate, I would guess a 5 kv unit would work. Drake made a retrofit kit that replaces that printed circuit capacitor with a fixed value doorknob. Bill Frost at Drake can give you the specifics. The L-7 is basically a good amp.

73s,

Evan

Bummer about the virus aspect... probably a good idea to stay away from
these titties.

At first glance the message seemed rather off-topic for radio
newsgroups. However, I suppose this unconventional use of silicon could
make it slightly on-topic. Silicone is certainly a more common material
for boob work. Silicon seems a bit hard and brittle for the task. The
new knockers must have been expensive, though.

Does anybody recognize the closing word? Looks vaguely Eastern-European.
How does one pronounce it? (I know... "just like it's spelled.")

Uh, look close. It's YAHOO, not EBay. EBay won't even let hams
sell some legit stuff.

And it's a 'CB Radio' specific section

Do a search on the guy. He's also sold a '3-pill' Fat Boy. I guess that
means an amp with 3 modules in it.

Yahoo doesn't care. They'll let you sell anything. I just hope they have a
real estate section so the neighbors of the guys who won those two actions
can move after getting unbearable RFI 24/7 from those amps.

Please tell me what good is it? From my calculations assuming 10K
watts OUTPUT the current draw from the 20 volt supply would be ONE
THOUSAND
AMPERES!!!! What pray tell do you power it with, your own 20K desiel
generator and run one inch cross section power leads from it and cool it
with a 5000 BTU air conditioner? I'm not going to even adderss the 40K
QRO
version, which by the way would be 80KW input watts since these things
only
run 50% efficiency.
The other question I have is running 32 semi conductors in
parallel
will have quite a bit of capacitance, I would suspect at CB frequencies,
if
it would radiate RF (besides generating all that heat) I would suspect it

would be uncontrollable and be the biggest BCI, TVI, and every thing else

"I" generator on earth.

# 4025. TS-520S PTT audio RF or glitch problem

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-15 22:15:26 UTC
From: eickrman@aztec.asu.edu
Message-ID: <ee6c448a.0407151415.20fb8131@posting.google.com>
Source record: 20377

I have a TS-520S that works reasonably well on VOX. However, when using PTT or if I use the "Send" switch to go to the transmit mode, the TX audio or RF chain is inhibited from producing very much output for several seconds. It is like large cutoff bias glitch is being applied somewhere and has to leak off to allow the TX audio/RF to get through to the output stage. As the cutoff bias leaks off slowly the transmit output slowly rises up to normal levels. This takes several seconds.

I sometimes even see this while operating VOX but this is fairly rare. However, I am always seeing it if I try PTT.

I've looked through the schematic and see no particular reason for this. The PTT or Send switch appears to just manually activate one of the stages in the VOX circuit.

Anyone ever see anything like this on a TS-520S?

Curtis Eickerman

Not to mention that those 32 diodes had better be pretty well matched- as
its going to be hard to use current balanceing resistors with this kind
of current to prevent current hogging by one, or 2 diodes, at this kind
of current, with 32 diodes explodeing , in unison would be quite
spectacular at this current load!! (Boom, Boom, Boom, Boom, ect)!

yes, the guy is crazy like a fox.
I posted a few questions to his auction and he removed them so
nobody would read it and not bid. His "lil" box can't generate that
kind of power. His house AC supply can't do it either.
He told someone that RG 217 - 218 will handle the 38,000 watts.
That would turn that coax into a puddle. The guy who won it will be a
very sad CBer. The seller should be reported!!!!!!

Hello-

A coworker of mine talks about how interesting HF is. He's moving and has been nice enough to give me one of his old HF receiver antennas. It's a Dressler (not sure the exact model) but he said it's good for receiving skywave and other HF signals.

I've been looking around on the net and all scanners I can find for HF seem to be $200 or greater. I'm really just a beginner (don't even have a technicians license), and only have an old Uniden Bearcat scanner. Up until now I didn't even have an antenna on the roof. I'm trying to take advantage of this situation (my friend being nice enough to give me an old antenna he says is quite good) and expand my horizons, but I'm not trying to break the bank in doing so. Are there $100 HF "beginner" kits out there? I don't necessarily need programmable dial entries - just a basic tuner to get me started.

Any ideas or recommendations?

-c

## 4030. Radio Shack HTX-202 ht need owners manual.

# 4035. Gear for sale

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-16 10:04:43 UTC
From: David J Windisch <davidw@copper.net>
Message-ID: <40f7a87c_2@newsfeed.slurp.net>
Source record: 20387

Gear for sale:

Two Kenwood TS-850SAT's, one hand mic (I'm a c-w man; even one mic is one too many, hi), use and svc manuals, "MARS mod" from mods.dk, "50-million-plus" S/N on both. I'm fussy about the 20MHz clock oscillators being "on frequency", so
I made tweaker-access-holes in the '850 side panels, in order not to have to remove the tops to set them while listening to WWV. $675@ + ship

2 NOS RCA 8122 spares for NCL2000 amp $225/pair

Two Ameritron QSK-5's, books $150@ + ship

One Drake W-4 wattmeters $70@ + ship

Two low-pass filters toss in w/rig

2 Johnson KW MatchBoxes, books, VSWR sensors $350@ + ship

One Kenwood PS-430 supply, book, scratch on front $85 + ship

One Astron 35A metered supply $75 + ship

None of the equipments is beaten up; however they do show the signs of my "normal use", eg, I rest my fingers on the tuning knob. You know what I mean. No sticking buttons, binding knobs, broken or sticky meters, and all pilot lamps light up.
**********

Heights 80-ft self-supporting aluminum tower, 26ft-sq wind load, rotor shelf $1500

20-ft mast, 2" OD X 0.250 wall $100

Create RC-5 rotator, 100ft cable $350

CushCraft X7 tri-bander $400

*old* HyGain 2L 40M yagi we need to talk ;o)

Five 100ft runs of RG8-type low-loss coax cable $100/lot

All is at grade level, good to go.
**********

I'll take the best offer on any of the above, and reserve the right to accept or reject any or all offers.

Disclaimers: No DOA, but used-as-is-where-is. Willing to ship what I can UPS-ground-insured, and though I can't drive any more, I may be able to meet

part way *if* I can get my son to help out with loading and driving the pickemup truck I gave him last year. I have good shipping cartons for all the radiostuff. The amps weigh in at over 80 lbs, tho.

Payment methods: cash, certified or personal checks, or combo are fine. I'll turn loose the goods, on complete clearance of all of what ever medium in which we shake hands and do business. Can't take cards or other methods.

Thanks for reading this far.

Source record: 20389

I acquired a Yaesu FT-2800 with no transmit output. I managed to get some output power restored by resoldering a few surface mount components but the transceiver shuts down on the high power setting(65 watts). Dose anyone out there have a schematic and parts list that can be copied/scanned and shared with me to assist my efforts in repairing this transceiver? Your assistance would be greatly appreciated. Thanks!

Uhhh.. have you tried the Radio Shack website?
http://www.radioshack.com

Click on product manuals, navigate through radio communications and on
to the HTX-202. There are several documents available...

Are you saying you actually GOOGLED this? I mean come on... it's just
logical that a manufacturer of a product would be the first place to
look for documentation. Granted, many boat anchor manuals are
difficult to locate, but the HTX-202?

I have the 40 meter version and love it. I only bought it instead of a vertical due to all the (19 I believe) excellent reviews on eHam.net. I will say the Isotron's have the best reviews than any of the verticals.

However I'm having a bit of a problem with the 10/15/20 Meter combo.

Put the 40 meter version up on a 12 foot mast, super easy to tune, worked great, 1.2:1 SWR across the 40 Meter CW portion of the band without the use of a tuner. Made better 40 meter CW contacts on the Isotron than on my dipole, I still can't believe how good that "birdfeeder" works.

Well I'm putting the 10/15/20 combo version together and its been more of a problem. Can't get a good SWR, about 2:1 is the very best I can do on any of the bands.

Each antenna has an SO259 connector and each antenna is connected in parallel via short piece of twinlead. So I don't know which antenna I really should connect my coax to, the 10, 15, or 20? Anyone have experice with the 10/15/20 combo who can offer some suggestions....

George

It is well known and proved that all the eHam.net reviews were sent in
by the same person, who is related to the manuafacturer.

Any time I see an Isotron at a hamfest all I hear are negative comments
about it. If you own one, try selling it! You cannot pay people to
haul it away.

As one poster said, the Isotron is ham radio J-U-N-K.

Then I must have a really crappy dipole because my 40 Meter ISO is doing a better job. 1 S-unit less noise and 2 S-Units more signal in side by side Comparison using a coax switch to switch back and forth....

I've seen many neg. comments about other products on eHam.net. You have to have faith in something being on the up-and-up.... Sorry but so far I like my 40 M Iso....

But on think I've quickly discovered is this, most people who say neg. things about a product are people who have never owned or tried one. They simply are spreading what they've heard from others who as well never owned or tried one. That is true for all products, not just ISO's or Ham equipment but all things in general....ya just have to try it for yourself.... Now I'm just trying to get my other ISO's to work as well as the 40 does....

It's just a standard serial cable. Make sure something is not
grabbing at your com port. Sometimes it is not at all apparent that
something is reserving the port. Also make sure you have the baud
rate and address set correctly for the radio.

Dick

No a standard cable should work fine. Make sure the CT-17 is powered
with a 12 volt supply, the CT-17 used Pins 1-8 and 20 on the serial
cable. Also the connecting cable to the radio should be a mono
connection. I have used a 9 pin to 25 pin cable or a adaptor with my
CT-17.

You have clearly made a poor choice of antenna in attempting to
put any kind of signal on the air with a very limited space Isotron.
If you want to defend your poor choice of antenna, hey, go for it.
Like the man said, ISOTRON = JUNK
Have yet to hear a valid positive comment about one, till you
came in here and started spewing your personal nonsense.
No wonder you have such a pee-willy signal on the air
ROTFLMAO!

The mic is at the bottom right of the front speaker, if if you
the radio in front of you that is its position. Usually the rigs
have pretty strong deviation being true FM and not phase
modulation. Check it out by calling for a radio check on your
local repeater!

Hell, I thought it was a Troll question..... If ya don't know what the PTT button is for or how to find it, best to quit while you're ahead. It doesn't get any easier. You speak of "simple things" - you got to be simple to not know those things or understand what you've read. Sounds like you're already in over your head. You can't possibly have a license to use the thing. So, start there and then worry about the radio. L.

Hi All;
I have 6 of these mystery grab-bag sorta sets of components & each has a construction box.
It took me many hours getting these so they all have about the same "stuff"
Most components are new, with some "clip-outs but all easily useable.
There are Mica, disc, other caps, BNC connectors, 9/12 volt relays, mica insulators, fet's, Chips, electrolytics, rectifier diodes, red single led's, peizo buzzers, xtals, trimmers, etc. Too much to list.
I hope the price is right?
I am asking $20ppd, shipping could cost me $5-6 depending.

Been trying to find the cause of excessive rf but lost on a good meter to use. A friend has so much rf on his ht on one freq that he is unable to transmit or rec on that freq..Ht picks it up in all rooms and outside, brought my ht over and the same result.

Would like a good meter anyway and this makes for a great opportunity to do so.. So any ideas on a good meter to find the source of these problems?

Jim

Obviously you have a real problem your 40 meter dipole. Sorry. I am
putting the Isotron's down, but I suspect you have some issues with
the dipole that should have been addressed.

<< A coworker of mine talks about how interesting HF is. He's moving and has been nice enough to give me one of his old HF receiver antennas. It's a Dressler (not sure the exact model) but he said it's good for receiving skywave and other HF signals. >>

Christopher-

I don't think your experience with the Uniden Bearcat compares with listening to HF. The Bearcat is normally used to listen to VHF and UHF public service stations such as fire and police, on radio channels that are silent between transmissions. When the channel goes silent, the radio's squelch closes and it scans to other channels to look for activity.

HF is a noisy band. There are not only Ham Radio conversations, there are foreign broadcast stations, Military communications, long-distance aircraft communications, et cetera. The squelch would stay open most of the time if you tried to scan HF.

I suspect there is at least one news group like this one, but dedicated to Shortwave Listening (SWL). If you search it out, you can get an idea what interests other people.

Good radios for SWL use are much like Ham receivers, and generally cost as much as a deluxe VHF/UHF scanner. Examples might be a Kenwood R-5000, Drake R-8B, Yaesu FRG-100B, Icom R-75, et cetera. (One source for new SWL radios might be Amateur Electronic Supply, http://www.aesham.com/.)

Less expensive radios are available, but look for a used one in your price range. Popular examples might be the Sangean ATS-803A or the Radio Shack Realistic DX-440. These have long been discontinued, but show up often on E-Bay.

Hi George.

As a more usable answer for you, as opposed to some, the Isotron is a member of a class of antennas that claim to put out a good signal, despite having a very small size.

Another example of this sort of antenna is the Backpacker.

Pretty much what these antennas do is place a significant tuned circuit at the end of your coax. The shield of the coax then acts as a radiator.

Does the antenna work? Despite what some say, it will work as long as you have that length of coax doing the radiating.

So why the hand wringing and gnashing of teeth? Well, there are better ways of getting a signal out - and safer ones - than having radiating coax. In general coax is meant to take a signal from one place to another, not serve as the launchpad for it! 8^)

One of the hazards of radiating coax is the possibility of RF getting into places where you don't want it, such as the radio in general, the audio signal you are transmitting, or your person. I got one rf burn, and plan on no more!

Now the comparison to your dipole. When comparing the two, it is good to know what the conditions were. Did you do a direct comparison, or was it displaced by time? Also the frequency and distance can be important. Were both DX? That radiating coax would likely be functioning as a vertical, with a lower angle of radiation.

But in general, a decent dipole should outperform an Isotron. So I suspect there might have been a problem with the dipole.

Hope this helps.

A good point Oliver - every manufacturer at one time or another has produced something they would rather forget. I have a FT-One on the workbench now for repair, and its horrible - but thats from my perspective as a working technician - had heaps of other radios from Yaesu that were fine.

I find ICOM difficult due to their physical construction and exorbitant spares prices (if you can even get them) but thats just my experience - Kenwood here in Australia are excellent and have had no problems with fixing their gear - again, just my own working experience.

Generally, I tend to rate them on how easy is it to get spares, how long do they support spares, how good are the service manuals,(indeed are they even available,) do they have good (or any) tech support for mongrel problems, and does the company want to know you after the cheque has cleared - in short, pretty much the same as every other product in any market.

To rubbish an entire company is absurd - if they made consistent rubbish, then they would not be in business......

<< Is there an adjustment pot on the MFJ259b for the freqency counter and if so, what number is it on the board? >>

Gary-

It looks like the counter module is purchased as a unit, probably from Optoelectronics. Therefore, MFJ may not know anything about it they don't need to know.

I've looked for anything that might calibrate the frequency, but couldn't find it. Perhaps further disassembly would have revealed a hidden trimmer capacitor. I doubt it would be a pot, but you never know.

How far off is yours? Mine is close enough for its purpose of checking antennas, but I wouldn't adjust a transmitter's frequency with it.

It seems to read about 250 hz high. As you say, perhaps close enough for government work, but I needed it the other day. A new ham came by with one of the RS 10 meter rigs he bought last year on sale. From my Kenwood, he was about 250 low and sounded just horrible, but the only counter I had at home was the 259B and it showed it was real close, so later I tried it on some 2 meter fm radios and it ran consistently high. I used to have an original 259 that died and I recall the counter circuit was on the back of the display and was adjustable. Even GOOD counters can be adjusted, so there should be something here as well, but I hate to take it all apart without a clue where to look.

For Sale: Fox-Tango Model S102-025 250 Hz CW Crystal Filter for Yeasu
models FT-757GX / FT-767GX. With original box.

$75 includes shipping in US.

Specifications:
1. Ultimate rejection: > 80 dB
2. Ripple: < 2 dB
3. Typical insertion loss: 250 Hz: < 9 dB dB
4. Zin/Zout: 2000 ohms
Physical: 36 x 22 x 20 mm
Reference 1201.1
Filter Fits By: Drop In
Bandwidth at 6dB 250
Mode CW 1 IF
Center Freq. KHz 8215.9

Please email any replies.
Thanks for reading.

George:

Most hams are both helpful and friendly. When I was thinking about getting my ticket (Oct., 01), I made the mistake of checking out the newsgroups. I was rather worried that the nastiness which is way too common here is typical of the hobby in general. The good news is that it is not (well, much of 75 SSB is, note the handle of the guy you are quoting .. <grin>). Luckily, I got my ticket anyway.

Ignore the bozos whose emotional development stopped around age 3. And try to understand that some of these guys are trying to be helpful but lack certain social graces.

It really is a great hobby .. whether you use a Isotron or a stack of 4-element SteppIRs

Beware of these e-mails, ALSO, the same thing is being done for PAYPAL!!
BOTH Ebay and Paypal will NEVER ask you for this information via e-mail.
If you respond to them, they look EXACTLY like Ebay and Paypal.
I would not even respond to it. Just forward them to spoof@ebay.com
and I believe the other is spoof@paypal.com.
If you click on the link given by them you can "sign in" with bogus username and
passwords.
BEWARE!!!!
You folks might want to pass this around to everyone and list it in other
groups.

## 4105. FS: Isotron 40m and 80m antennas

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-19 14:04:32 UTC
From: Fred Zimring <fredez2@airmail.net>
Message-ID: <cdgkb2$720@library1.airnews.net>
Source record: 20304
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

The 80 meter antenna has been sold. The 40 meter antenna is still available, either assembled to be picked up in Albany, NY or disassembled and shipped. $35 plus shipping. Thanks, Fred Z. (W5HTR), 972-231-7511.

# 4106. TS-530S for trade

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-19 14:12:58 UTC
From: military1944@aol.com

Source record: 20305

TS-530S hf transceiver, with MC-50 desk mic.
working, but would benifit from new pa bottles (50-60w out at present)
very nice condition, hardly a mark on it.

would be interested in exchanging for something a little older ?
more greener ? more butch. Eddy rx ? miitary set ?
make me an offer.

cheers, Ben. G4BXD

>
> 73 de F8BOE Olivier ...-.-

Yaesu has EARNED the title of "SHIT" in MANY ways. FT-7100 HORRIBLE RCVR! in fact the radios went thru THREE factory recalls and its still a shitbox. FT-8100 intermittant piece of crap! poor printed circuit boards, the 7100 replaced it. FT-90, nows heres a REAL winner (and STILL a current model). Don't know where to start on this horrible turd of a radio! Poor rcvr, lousy squelch, crummy rx audio, drifts off freq as it gets warm. I had 2 of them, first one destroyed by fire (it CAUGHT fire). Yaesu replaced it free of charge, the replacement lasted 3 weeks before dying.
VX-5R...popular radio, dont expect much from it...somewhat OK performance for a handheld HOWEVER....it will NEVER make 5 watts EVER on any of its 3 bands from a battery. Yaesu advertises it as a 5 watt radio ITS NOT. It will make 5 watts from an EXTERNAL 13.8 Volt supply and you better be holding it with an oven mitt!
The radios "duty cycle" is a joke. Icom's "T7H" outperforms it hands down on 144 and 440 (for $179).

Yaesu's service dept is a good bunch of guys, treat them well..they are your friends. However DO NOT expect them to make a radio for you out of a box of shit!!! Thats NOT their job.
Please read the experiances/opinions on www.eham.com and see what happens after the "new radio smell" wears off. It's like the people that buy "Eurojunk" cars....brag about how bitchin they are right after they buy one, until you see them driving a rental car in 6 months after their VW caught fire or their BMW A/C crapped out or their Mercedes needs a set of $750 sparkplugs.
Ask the people that have owned that model of radio for 6 months if they would BUY IT AGAIN!
The other poster has a point too, every company has had "bad" models..thats very true, but Yaesu has laid so many brown eggs called radios, its mainstream for them.
I have owned MANY radios, from Alinco,Standard,Swan,Kenwood,Icom,Regency,Relm,Maxon,Motorola,GE,Fujitsu,DJI

,Midland and others. I design some of my own equipment so I am familiar with design. Yaesu is designed with a dollar sign in mind, they cut EVERY corner they can, cheap,Cheap,CHEAP.
If your radio is an investment, buy one that will perform and last. Yaesu is the "Yugo" of ham radio these days.
Of course this is *MY* opinion, and I'm sure others will vary. A lot of people are "Brand Loyal".

LOL
haven't you been reading the on going thread about Isotron
antennas? They are one of the worst performing antennas
ever made.

ISOTRON = J-U-N-K

In my area, you would have to pay someone, just to haul an
Isotron away for scrap.

Hey, you need to get together with the dude that continually posts.

ISOTRON = JUNK

so you two can post 2 or 3 word judgements.

I checked out eham, and the reviews for Yaesu. They are rated
consistent with the other brands.

Yup. for myself, I haven't met a Kenwood that I liked yet. But I guess that's why there are different radios, eh?

Must be a Ford vs Chevy thing.....

From: DAVID BROWNE <david.browne7@ntlworld.com>
Message-ID: <ZfWKc.1826$9d4.133@newsfe5-win.ntli.net>
Source record: 20311

hi I had loads of interference giving s9 reading on 40 meters, so I powered
radio of battery and switched off house mains power and it stopped
so then I switched of appliances and then I found it, it was a switch mode
power supply for the computer video capture that failed

> If you respond to them, they look EXACTLY like Ebay and Paypal.

Actually they will not when you look closely. Any form legitimately
requesting sensitive personal data will via a 128-bit, encrypted,
secure link, NOT email, and SCAM ARTISTS are incapable of duplicating
these. (Email is not secure.)

Both Explorer and Netscape contain icons at the bottom of the browser
window to show when such a secure link has been established and in
effect with your computer, and both allow you to check the security
level established, and inspect their certification credentials (the
security Certificate that they hold) for authenticity.

Normally eBay and Paypal go through this ritual only when you are
first open your account and is required.

You'll see the identical security measured being taken when doing
online business with any reputable dealer when credit card number are
needed, and also when you access your "On-Line Banking" with
Bankamerica, Fleet, Citicorp, and Chase Bank. In fact, you won't even
be asked to enter your password or PIN number except via a secure,
encrypted link.

Now here is a guy that tells it like it is!!
The sad part is most of what he says it true :-(
FT-8000 / FT-8100, so so. NEVER tighten the
volume controls if they get loose. You WILL be sorry!!!!!!!!
Wonderful design, they should be ashamed of themselves!!!!!!!
Details needed, e-mail me. Took me 4 hours of micro surgery to fix.
And with that I won't trust it in the bouncing of a car. It's now a base radio
forever!
Again, they should be ashamed of themselves!!!!!!

I am looking for an amp that uses one each 8877/3CX1500A7.
This unit will be used to test 8877 ONLY. So looks are not that important
but realiabilty is a very necessary point of sale.
Suggestion for this amp have been:
AL-1500
DTR-2000

FYI - I have for a sale 8877 Eimac Pulls that have been tested and are
90%+
Please Email me for any inquires.

Mike, I stand by what I previously posted.

I suggest that you go back and more carefully re-read it before
dismissing it's factual content.

Learn what a secure link is, and how its use is indicated on your web
browser screen.

Learn how to check the seurity level of the link, read its
Certificate, see which security firm issued the certificate, its
expiration date, etc.

Every single one of the "Recent Phishing Attacks" that are cited
represent rather crude email bait, some leading to a non-secured,
non-encrypted, and obviously scam URL that aim to fool only the most
naive and inexperienced net users who evidently never bother to employ
common sense

Of course it's precisely these net ignorant users that are the targets
of the scammers, and nothing except learning how to employ the
security measures alrady existing on the web is going to protect them
from really stupid acts based total upon their own to learn how the
system operates prior to using it.

It's very similar to the confidence artists of current and earlier
generations who relied on the ignorance and/or greed of their victims
for success in perpetrating their scams. All scams that I have seen
rely on one or the other of these factors being present in order to
rip someone off of something. On top of that, these scammers justify
their actions as an educational exercise of value to their victim,
which in many cases it certainly is.

Harry C.

p.s. When bidding on eBay, there are a number of measures that you can employ to protect yourself from being scammer. Always carefully check the sellers feedback and how long he has been a member of eBay. Be wary of "Power Sellers" since these are usually firms that market mass volumes of usually "distressed" merchandise. Be particularly wary of sellers having zero feedback, particularly if they have been a member of eBay for less than a month or two. (Prior to bidding, communicate with these new sellers by email and learn what their story is, realizing that someone selling on eBay has to start somewhere. Still, it's most unusual to find a seller on eBay that has not accumulated some level of positive feedback previously as a buyer. It should be regarded as suspicious when that is not the case.)

Source record: 20331

If you're interested in buying new ham gear at above retail prices, you can try Upay, I mean Ebay. For example, the Kenwood TM-271A typically sells for $175-190 on Ebay, new or used, while you can get it retail at dealers for $145.

Hi All;
I have 6 of these mystery grab-bag sorta sets of components & each has a construction box.
It took me many hours getting these so they all have about the same "stuff"
Most components are new, with some "clip-outs but all easily useable.
There are Mica, disc, other caps, BNC connectors, 9/12 volt relays, mica insulators, fet's, Chips, electrolytics, rectifier diodes, red single led's, peizo buzzers, xtals, trimmers, etc. Too much to list.
I hope the price is right?
I am asking $20ppd, shipping could cost me $5-6 depending.

I am looking to sell my beautiful Icom IC720a
This HF (high frequency) Ham/Amateur radio comes with matching power supply and desk mic.
It works great and I have used it to make contacts and recieve SSTV and other digital modes. With the correct antenna (and the will to do so..) it will even do C.B. frequencies.
It also comes with the manual.
This is from a NON SMOKING home so no yellow tinge or smoke smell in the mic.. ;)

See this web page for a nice listing of specs and pictures
http://www.qsl.net/sm7vhs/radio/icom/ic720a/ic720a.htm

Only reason I am selling is because my son wants to get into Quarter Midget Racing and we need the money for safety equipment and a car.

I would like $350.00 for it and it is located in Central Lower Michigan

Message-ID: <cdma4e$rqh$1@avnika.corp.mot.com>
Source record: 20341
Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment,sci.electronics.repair

I recently picked up an Eberline model PAC-ISAGA Alpha Counter radiation meter and I need to know what to set the high voltage to.
This unit has a scintillation probe to measure alpha particles. This probe is different from the Geiger/Meuller probe for gamma measurements.
All I was able to find was an army parts list for the external case.
What's interesting about this unit is that it appears to have a serial number of 001 engraved on the top cover.

Any info would be greatly appreciated.

Thanks,
Larry VE3LRI

# 4145. IC-208: easy way for easy install/remove the front panel?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-22 10:59:02 UTC
From: olivier.lecam@crdp.ac-versailles.fr
Message-ID: <40ff9df6$1@ac-versailles.fr>
Source record: 20347

Hi -

I was projecting to buy a new IC-208 for mobile operation. The front head of this RIG is just small enough to be installed in my car. Unfortunately, I was very disappointed when I discovered at my local dealer that the remote cable is fixed to the panel with a screw! So that it is not possible to attach/remove the front panel quickly. Does someone know a way or a tip that can allow easy installing/removing of the unit?

Thanks in anticipation for your help!

> Ahh, the Ebay Guild is born! Only buy off good established sellers.
> Those new ones are gonna scam ya.

Mike, that's a pretty bizarre interpretation of what I posted. I was simply sharing my experience gained though something like 5 years of buying and selling on eBay with the newcomers.

If you want to purchase a "pig in a poke" from a seller with zero feedback it's certainly your option to do so and eBay or its established sellers can do nothing to prevent you from doing so. Then too, if a seller has zero feedback most people would consider it prudent to contact the seller by email and determine the facts of the situation.

I personally purchased a HP LJ4+ laser printer from a seller on eBay with zero feedback, but only after an email conversation with him (since this was an over $100 item plus signigicant shipping expense). In fact, I was the very first to provide him with positive feedback.

Realize the facts. On eBay, the majority of fraud stems from sellers with zero feedback offering highly underpriced popular items who insist on payment by a money order (which once cashed is essentially untraceable). Be afraid when you run into this pattern...be very afraid!

Be aware of the importance of feedback on eBay, because like a D&B report, it paints a picture of the seller's or buyer's past history and performance. Without reading it, you are flying blind!

If you check out my feedback on eBay, you'll learn that since Feb 15, 1999, I've accumulated a total of 313 postive feedbacks (a score of 223 positives since repeat purchase or sales to the same person don't count), plus one neutral from a woman who praised my packing and fast shipping, but claimed that the sealed-in-box antique Cabbage Patch Doll that I sold here "smelled like smoke". Just for the record, the majority of my feedback score stems from items that I have purchased over the years, since I've been only selling since the beginning of the year (roughly 25 items so far this year).

As a seller, I make it a practice to try and ship out an item the day after the auction ends, provided he/she (the buyer) has substantial positive feedback and no negatives even though I have not yet received payment. (I haven't been burned by anyone yet!) Obviously if I

received immediate Paypal payment I ship on the next business day, regardless of the buyer's feedback.

Frankly speaking, on eBay the more new sellers the better, because it expands both the quantity and variety of items being offered for sale.

> Mybe that's a good idea. The established sellers can band together to
> keep new people out.

Are you normally a believer in conspiracy theories? :-) As a new seller, I can't imagine how such a thing could even be done, or any reason that anyone would want to! I sell collectable, antique computer game software, ham radio and research components, radiation detection equipment, technical items, etc. Who would it possibly benefit to keep any of my items from being listed on eBay, and sold on eBay as most of them are?

Think about it.

Harry C.

# 4154. FS Super Nice JRC JST-245 Station

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-23 00:11:44 UTC
From: Charlie Hugg <hug-a-bug1@cox.net>
Message-ID: <8JYLc.31191$SD3.2840@okepread06>
Source record: 20256

I have a Mint JST-245 HF Plus 6 Meters Transceiver with every optional filter and the Monitor Board installed. I also have the High Stability Crystal Kit(It is new in the box, not installed) plus the matching JRC NVA-319 Speaker and the original Service Manual. I have the original boxes for the JST-245. Also included in as new Heil GoldLine Desk Mic with correct cable for the JST-245. This rig has low hours and is very nice. I don't think that you will find a nicer none. It works perfectly. I just have too many transceivers. I can provide digital pictures upon request. I will the sell the whole package for $2200.
Thanks,
Charlie Hugg, K5MBX

# 4156. FS: one TS-850SAT, c-w filters, PS430

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-23 09:22:11 UTC
From: David J Windisch <davidw@copper.net>
Message-ID: <4100d904_2@newsfeed.slurp.net>
Source record: 20258

FS: one TS-850SAT, c-w filters, PS430

Service and user's manuals, too. Filters are Kenwoods, 270hz in 8.3 and 0.455 MHz i-f's. Fifty-million-+ serial no. Xcvr is 9+ cosmetically; has "MARS Mod" and access-hole in side to set 20-MHz osc "right-on". PS has probably-buffable scratch on front. Both TEN electrically. Boxed.

$775 plus shipping from Cincinnati 45251.

73, Dave, N3HE

rec.music.makers.marketplace,rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.swap,rec.photo.marketplace

I have been working on a commercial auction/discussion site for the
past three months and the day has finally come to launch it! The site
is http://www.geektraders.com. It is a site for geeks to go and
sell/discuss geeky stuff ! It caters to many aspects of geekyness,
including photography, astronomy, musicians, ham radio (engineering)
and car enthusiasts. It is even run by geeks and musicians !

This is a unique site, as it not only allows for standard auctions,
but it allows for swapping as well. I have set up this site as a FREE
service with the following features:

FREE auctions with 'buy now', dutch, swap etc.
FREE personalized store (you can upload your own logo)
FREE chat and discussion board to discuss your store/auctions with
your customers
FREE advertising on the board (musicians, hams ...)

There will be a charge for bold and featured items on the site.

This is a brand new site so lets generate some traffic !

Have fun and thanks for your support !

# 4160. FS Yaesu FT-2400

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-23 22:24:38 UTC
From: Charlie Hugg <hug-a-bug1@cox.net>
Message-ID: <QegMc.31895$SD3.8896@okepread06>

I have for sale a Yaesu FT-2400 2 Meter 50 watt Mobile Transceiver. It
includes the mobile mount and the touch tone hand mic.
I will ship it to the lower 48 for $110.
It works well, but has some scratches due to being mobile.
The the little door on the lower right front panel is missing.
It doesn't look bad w/o it
Thanks, Charlie, K5MBX

# 4161. FT: TS440S w/tuner, manual, MC80 mic.

I have a TS440S with tuner, manual, power cord, MC80.
The radio has had the MARS/CAP mod. done.
Rx is 30khz-30mhz.

I'd be interested in the following:
FT817 with PSK cable.
Kenwood TM742
Dual Band mobile

Or let me know what you might have.

thnx

Hi,

Do you remember that company, Westid, that sold your callsign engraved on an electrogolden badge ?

Like the Phoenix it survived, or rather, thanks to my request, another company resume this business, MAXSELL.
It found back the designer, and recreated a master die thanks to an original badge that I had ordered to westid and sent them.
That took months to get the product ready but now you can order it for a few weeks.

If you want to engrave your callsign on a badge look at this link:
http://www.maxsell.com/radio_badge.htm

Maxsell is shipping the first orders these days.

Hi,

FYI here are two propagation software that look rather complete and using a pretty and user-friendly GUI. Let's try them.

First the simpler, DX Toolbox :
http://www.blackcatsystems.com/software/dxtoolbox.html (zip to explode and run)
then the more complex one, Win CAP Wizard :
http://www.taborsoft.com/wwizard3/ (come with a setup).

For WINCAP read well the installation notice BEFORE to install.
Both work completely in a different way but each deserve a try.
Of course they request some basics in propagation...

<< Been trying to find the cause of excessive rf but lost on a good meter to use >>

Jim-

David Browne's suggestion of killing the power, is a good way to track things down. However, not everything can be turned off. The problem could be outside the house on a power pole, or inside a neighbor's house.

You might be able to use an AM portable radio tuned to a spot with no nearby station, perhaps up around 1600 or 1700 KHz. Such a radio can be used as a direction finder by turning it to null-out the noise source.

MFJ makes an "AC Line Noise Meter", model MFJ-852, that promises to find noise sources. It works at 135 MHz and has two collapsible whip antennas. There is a meter on the front that shows noise strength. It has an earphone jack so you can hear the noise.

I haven't found much yet with mine, but notice that you can hear noise on the earphones that doesn't register on the meter. (Too many toys, not enough time!)

He's posting it because he's hoping to find a SUCKER to sell
this piece-of-crap excuse for a non-antenna/true-dummyload.
You are 100% correct Len. The Isotron antenna, just like the
Isopole which preceeded it, were/are/always will be PURE SHIT
and utterly useless for any type of ham radio usage. Thank glub
that AEA is out of business and can't pass on their shit-ass'ed
halfwit products to a new generation of hams. Now if we could
only duplicate the same results with MFJ and Radio Shack !

DXLab, a free suite of 8 applications that automaticly interoperate,
includes the following capabilities for monitoring and predicting
propagation:

1. collects SFI, A, and K indices from up to 6 web-accessible DX clusters,
and displays high/low/last values for each over the last 30 days

2. uses the IONCAP engine and the current SFI to predict propagation between
your QTH and another location specified by lat/lon, gridsquare, IOTA tag, or
by clicking on a location on a world map; the prediction is shown as a
QST-style "bands open over a 24-hour period" chart, with the option to
display critical frequencies

3. displays the auroral region boundaries on its world map as a function of
the K index, along with your signal's great circle path; in combination, you
can assess the likely degree of auroral interaction

4. displays the solar terminator and computes sunrise/sunset times for your
QTH and any other specified location over any 30-day interval

5. allows you to assemble a schedule of IARU/NCDXF HF propagation beacons;
optionally QSY's your transceiver and optionally rotates your antenna to
monitor each beacon in your schedule while highlighting the beacon's
position on a word map

All DXLab applications are available via www.qsl.net/dxlab and several other
mirror sites.

Source record: 20297

Bill,

Go here http://www.batlabs.com/gp300.html for model decode.

Your radio is:

Portable
5 Watt
VHF (136-368 Mhz)
A P110 Model
Capable of 20/25 Mhz Channel Spacing
PL/DPL capable
8 Channels
High Split VHF - 146-174 Mhz

This radio is probably modifiable to 16 channels, but not sure.

As for MURS, it can be done, but MURS rules has some
bandwidth or channel spacing requirements. See here:
http://www.provide.net/~prsg/murs_faq.htm

As for programming, if your were close by in NNJ, I'd handle it, but you
should find somebody close to you without any problem. Try the YAHOO
Group - "radio-programming" at
http://groups.yahoo.com/group/radio-programming/

Good luck, Joe

I have for sale a Hallicrafters SX-117 Receiver. It does work, but
seems to need an alignment. Sensitivity is low.
It is complete and original. Cosmetically, it is nice. A few small scratches
in the paint of the cabinet. Face plate is great.
Knob inserts have some scratches. Chassis could use some cleaning.
Comes with origial manual. This is a Ham Band receiver, but has several
optional positions on the Band Switch to add Crystals for 500 Mhz segments
of Shortwave Bands.
Price is $175 plus shipping from 79602. Digital pictures available. Thanks,
Charlie Hugg

Hi gang,

can anyone help with supply of plugs for a couple of US sets here please. I hate soldering wires to sets, its so ugly.

GF-11 transmitter. Its a large 9 pin free socket thats needed.

T-13A vhf tx, small 4 pin, slightly larger 8 and 6 pin, again, line sockets needed.

Happy to buy these and pay for postage across the pond to dear od blighty.

many thanks. Ben G4BXD.

>
>

Thanks Fred I am going to give that a try also.. Might be a lot of
things causing his problem. Give you a little update...

First the interference is only on 145.150. Next we used a elf meter
and
can trace the cable lines through the whole backyard to the house,
even
has a tree throwing out elf because of the cable running underneath it
so close..

We shutdown all speakers, computers, tv and disconnected the cable at
the house, all of the above were turned off and then unplugged.

Still have a hiss coming across tghe ht and scanner and mobile rig set
to that freq...

I told him to walk around the house, outside with the ht set to
145.150
and see what happens. This is his reply..

All of the below was done with the h/t set on 145.15

Not sure what to make of any of this but I find that walking behind
the
garage I have a better chance of ridding myself of the noise (aluminum
siding?). Come out from behind the garage and I get noise. Put the
honey
locust tree in the middle of the yard between me and the house and I
can
dump some noise. Walk towards the house and the noise is almost
constant. Walk out front and get near the lamp post and noise picks
up.
Walk away from the lamp post towards the east and the noise goes out
by
the time I reach my neighbor's driveway. Mostly quiet as I walk north

across the street, pick up noise again as I near my sister-in-law's house (she has Commie Cast for what that's worth). Come back across the
street and noise becomes constant as I reach the lamp post.

Almost sounds like the lamp post to me...

Thanks for the much needed help
Jim Kb8wln

# 4201. Re: FS: ISOTRON 40M ANTENNA

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-26 22:14:47 UTC
From: Minnie Bannister <GoonButNotForgotten@NottheBBC.org>
Message-ID: <10gb0in6n67pld4@corp.supernews.com>

A long time ago I had a 2m AEA Isopole antenna that seemed to do pretty
well. I sold it when I moved.

As for the Isotron, I notice that, out of 19 reviews on eham.net, it
gets mostly 5/5 and 4/5, with only one review worse than that -- a 3/5.
Average is 4.7/5. One user deals specifically with the claim that it's
the feedline that radiates rather than the antenna, noting that his
feedline is mostly lying on the ground with the braid grounded at both ends.

I dunno: it may not be the world's best, and it may be overpriced for
what it is, but it doesn't sound like junk to me.

Alan AB2OS

As I had pointed out before - in a private e-mail, lacking an RF meter, you could get in the vicinity of the noise, and with the Smeter of the 2 meter HT, watch it rise to full scale, then remove the antenna and draw in even closer to the source. If need be, borrow a step attenuator and attach it to your BNC and place in the attenuation until you are RIGHT AT TARGET. It still sounds Cable related. The fact that a tree cut it off, is not much to go on, it may have just nulled it out. Just as you could do if you turn your back to the noise source. I think you're running in circles needlessly.

<< It still sounds Cable related. >>

Lou & Jim-

Perhaps you have something there. I don't remember the frequency, but there is one cable channel that puts out an interfering signal on one of the repeater frequencies in the 145 MHz range.

The fact that the interfering signal seems to be everywhere, supports the cable theory. It doesn't take much leakage for the signal to be heard on a Two Meter handheld. If it is coming from the cable, there is probably no way to get away from it, and others are most likely having the same problem at other places within the range of that repeater.

If others are bothered, the repeater owners may want to change frequency. Otherwise, all you can do is use a CTCS tone system on the repeater output. Unfortunately few Ham rigs have tone decode capability, and if they do, it will only work where the repeater's signal is stronger than the interfering signal.

Good Luck

> The Isotron and Isopole antenna are totally unrelated. The only thing in
common is the prefix of the name.
The Isopole employed commonly accepted quarter wave skirts to choke off out
of phase RF from the support mast and coaxial shield. The Cushcraft Ringo
Ranger emplys 1/4 wave radials instead of the 1/4 wave cones used by AEA-
same mechanism

From reviews on the AntennEX site, the main radiation from the Isotron is
the outer shield of the coaxial feedline not the antenna.

Source record: 20230

I have a SB 220 that has 10 meters converted to 6. It works on 6 (800 watts) and 20 (1100 Out peak)
but on 15, 40, and 80 only gets 300 to 400 watts out. Tubes are Ok and plenty of plate and grid. It just does not load as it does on 20. The conversion seems to follow the 1964 CQ article that was very popular. Nothing there should affect anything but 10.

I have a good reprint but before I dig in are there any ideas as to why it does not load on some bands? Thanks.

The input circuitry might be suspect as would be any fixed capacitors that might be switched in to the final circuit for the lower bands.

As a side note, take off the Heath nameplate, drill out one of the holes ever so slightly, mount a miniature toggle switch there, and wire it in as a standby switch for the changeover relay. When you go to sell it, just replace the nameplate and rewire back to the original. This circuit is essential for those that believe this amp is "instant on"...

# 4231. F.S. Kenwood & Drake filters

Hello,

I am doing some work on a Yaesu FT-ONE transceiver. I have both the operating manual and the technical manual, but I require a copy of the "service manual". Does anyone out there have a copy, either electronic or on paper, they would be willing to sell? Or, know where I could get one? Does Yaesu still sell manuals for old rigs?

Thanks,

Thank you for taking the time to read this.

Your Freedoms are in jeopardy! RadioShack Corporation has filed an injunction in a Texas Court that has shut down an opinion website, http://www.radioshacksucks.com, in direct violation of the Freedoms of Speech, Expression and Peaceful Assembly, as guaranteed to us by the Constitution of the United States. If other companies learn of this, they will use it against any website that speaks out against that company. This is extremely dangerous, as it will change the face and scope of the Internet.

If Big Business continues to dominate our lifestyles, we will lose our freedom to worship as we see fit. We will lose our freedom to vote for the candidate that we think will do the better job. We will lose our freedom of the press to accurately report on current events. We will lose everything we have fought and died for in the past 228 years Do not tell this to the descendants of those that have bravely fought in previous battles and wars, for their ancestors would have died in vain. The Constitution will have been overruled by Big Business.

RadioShack is on a vicious witch hunt and will not stop until they dominate our lives. RadioShack must be stopped now, before it gets any later or any worse.

Here is what you can do to help: copy this letter and add your signature to the bottom. Mail it to the following people:

Leonard H Roberts
CEO RadioShack Corporation
100 Throckmorton Plaza
Ft Worth, TX 76102

The Honorable Kenneth Curry
401 W BELKNAP
153RD DISTRICT COURT
FORT WORTH, TX, 76196-0225

Thank you for your help and support.

Gear for sale

Hi, all concerned:

I have the following gear up for sale:

Two Kenwood TS-850SAT's, one hand mic (I'm a c-w man; even one mic is one too many, hi), user and svc manuals, "MARS mod" from mods.dk, "50-million-plus" S/N on both. I'm fussy about the 20MHz clock oscillators being "on frequency", so I made tweaker-access-holes in the '850 side panels, in order not to have to remove the tops to set them. $600 each + ship

One Kenwood PS-430 supply, book, scratch on front $85 + ship

One Astron 35A metered supply $75 + ship

I'm in Cincinnati 45251; 513-674-7202 eves/wkends. *Please speak clearly and slowly* if you get the answering machine. I couldn't return a call or two the last several weeks or a month cuz I couldn't understand the caller :o(

Tks for reading.

Most any 2 way radio shop in your area could do it. There are many fine shops out there which do Ham/2 way repairs - mine included. Those transistors though, aren't exactly cheap! So, be prepared to pay a little.

btw, did you ever figure out and correct the cause of the transistors to melt down, such as a high SWR on antenna? Short on coax, etc? If not, will surely happen again, and I doubt it would be covered under any warranty.

Well ... sort of. Often when I need a part I end up at Radio Shack. If you are talking about our frenzied devotion to playing with things electric, then yes, RS is a predator. The blog has moved on and is no longer describing the original problem.

No problem on SWR, etc., I continuously monitored input RF watts and output RF watts (separate power meter) and reflected watts. No problem, low SWR (between 1.2-1.4 to 1.0), and no other funny business. Was using the amp more or less continuously for a good ten years or so, not very often (maybe three times per week for a total transmit time of maybe 10-20 minutes, and a fan on the heatsink). The GasFET preamp still works, but I've noticed at hamfests sometimes guys selling bricks have a problem in either transmit or receive.

I have another brick amp, an old LUNAR 10 in, 80 out amp, with old preamp (pre GasFET, high noise figure), single transistor, and much older (20 years) and its still going full blast!

I need the dbs because I work some old friends 2 m FM simplex and am just at the fringes where ground wave really needs a couple extra db above noise.

Some of the earlier power transistors (eg. old heathkit solid state HF transceiver was one famous for this) did 'burn out' (slow, progressive and complete decrease in RF output over weeks to days to hours) when they first came out and maybe this phenomenon is still around but at a lower frequency of occurrence. Actually, I remember the transistors did this same burn out just a few weeks after I bought this RF Concepts brick amp (but before the warranty went out) and RF Concepts did replace them, sent the unit back promptly, and everything was just fine for a long long time. I was happy and figured it would keep on going forever. Not so.

Could be they had a bad pool of components when manufactured, or some sort of design flaw. Some of the "Heathkits" I seen were good for faulty components. I'm not sure if those companies put out sheets on updates to service or problems encountered, but if they did, it may make good reading. I'm not so much referring to Heathkit since they're gone, but the others. But, that or a manufacture defect, may have been the cause the first time around.
I'm not real familiar with that unit other than the name, so not sure if it has a fan on it (see question below). Maybe the heat sensing circuit went south, thereby not allowing the fan to come on (if one is involved) or allowing it to cut back the RF "electronically" in the event of a problem. OR maybe the RF reduction circuit did kick in for a reason or maybe no reason at all, and stayed in. I've seen that happen too in regular transceivers. The transistors were rather aged if I read your post correctly, perhaps one broke down and took the other with it. That wouldn't be too uncommon. Not having a schematic or other to go on, that's what I can tell you for now.

The fan on the heatsink, was it placed "near" or on the unit by you, or was the Amp manufactured with the fan attached? Did it ever shut down, to your knowledge or sound like it "slowed down"? The way you stated about the fan, I'm not sure if you placed it there or if it came attached. Some units do come with fans, some don't.

# 4260. IC-208 cloning software

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-30 16:43:30 UTC
From: olivier.lecam@crdp.ac-versailles.fr
Message-ID: <410a7ab2@ac-versailles.fr>
Source record: 20114

Hi -

FYI

Some information regarding the cloning protocol for the IC-208 are
available on my website at http://www.f5mzn.org/icom

These informations are very basic but can be usefull for someone who want
to understand how the cloning protocol is implemented.

I've also made a very basic win32 program (experimental) which can be use
to clone an IC-208, as well as to programm the memories. The source code
is also available, under GPL licence.

Hope this helps

73,

# 4261. FS Yaesu FT-8100 and FT-2400 Cheep

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-30 16:44:46 UTC
From: Charlie Hugg <hug-a-bug1@cox.net>
Message-ID: <DWuOc.3740$Oz2.1884@okepread06>
Source record: 20115

I have for sale a Yaesu FT-8100 that needs some work. It looks brand new and comes with the original box and manual, mic, power cord, etc.
It needs the band limits set. Currently it covers only 143 through 144 MHz and 430 and 440 MHz. Also I get no audio. The meter indicates signals are coming into the radio, but I don't hear anything. Price is $135. Also, I have a Yaesu FT-2400 2 Meter Transceiver for sale. It comes with the mic, mobile mount, and a copy of the manual. It needs some work including an internal battery. It loses memory and band limits when turned off.
I have the instructions on how to set the band limits. The transceiver has been opened up to cover 118 to 174 MHz. It also has a bad mic connection.
Price is $60. Thanks, Charlie Hugg, K5MBX

Or, assembly shortcoming. Kenwood had, at one point way back, a 2 meter FM rig with 70 watts output. Stories were that something overheated (bad solder? silicon?), and either some tab on the power transistor had to be resoldered OR the whole PT replaced. I recall hearing about a few others like that. Not too many 70 watt output VHF/UHF boxes out there any more (though I know TV broadcast transmitters, fully solid state exist for tens of thousands of watts output using a lot of 500 to 1000 watt modules in parallel and hot-pluggable.

Some of the "Heathkits" I seen were good for faulty

I suppose I could google this for a few hours (assuming I get the right keywords....) and learn something.

> I'm not so much referring to Heathkit since they're gone, but the others.
> But, that or a manufacture defect, may have been the cause the first time
> around.

A guy I know who chased down reliability problems in the major present brands came up with a fair range of variability. Some brands have a failure rate higher than others and also are harder to get fixed, and harder to get fixed the first time around.

Then, from his experience as related to me, you get over-billed and they guy looks to see if a said replaced component is really replaced and all, or almost all, the stuff has the same dust on it.

Now that I think of it, yes, the heat sink did overheat once or twice and it did auto shutdown. Also, the SWR protect circuit went off maybe two or three times when I had a coaxial switch in the line and was flipping between antennas (with RF off during the flip) and forgot to re-connect one antenna (thus, no load those times). Buuuut, that was quite a while before the power dropoff took place. I was using the amp for several years with no more problems, transients, whatever, and then one day, output power dropped about 10-15%, next time, another 10% or so. Next time I used it, a few days later, power just dropped off maybe 10-20% per 1-2 minutes untill there was no more power coming out than was driving the amp.

I forgot about the fan question. Its my own fan, just placed on top.
Muffin-type, blows air down on the fins. Is insulated from the heatsink.
Antenna is some distance from the shack. At various times I had digial
dial gauge themometers with sensor placed on the heatsink to continuously
measure through that contact (may not be the best, but an indication such
that I did not have to touch the heatsink every few minutes).
Occassionally these heatsinks can get so hot that you can't touch them
(temperatures where you can't hold your finger on would be around 110-115
degrees which is really far below the mid to upper 100s where you'd
better start thinking about melted devices) so I wanted some indicator
that I could watch while making a long transmission.

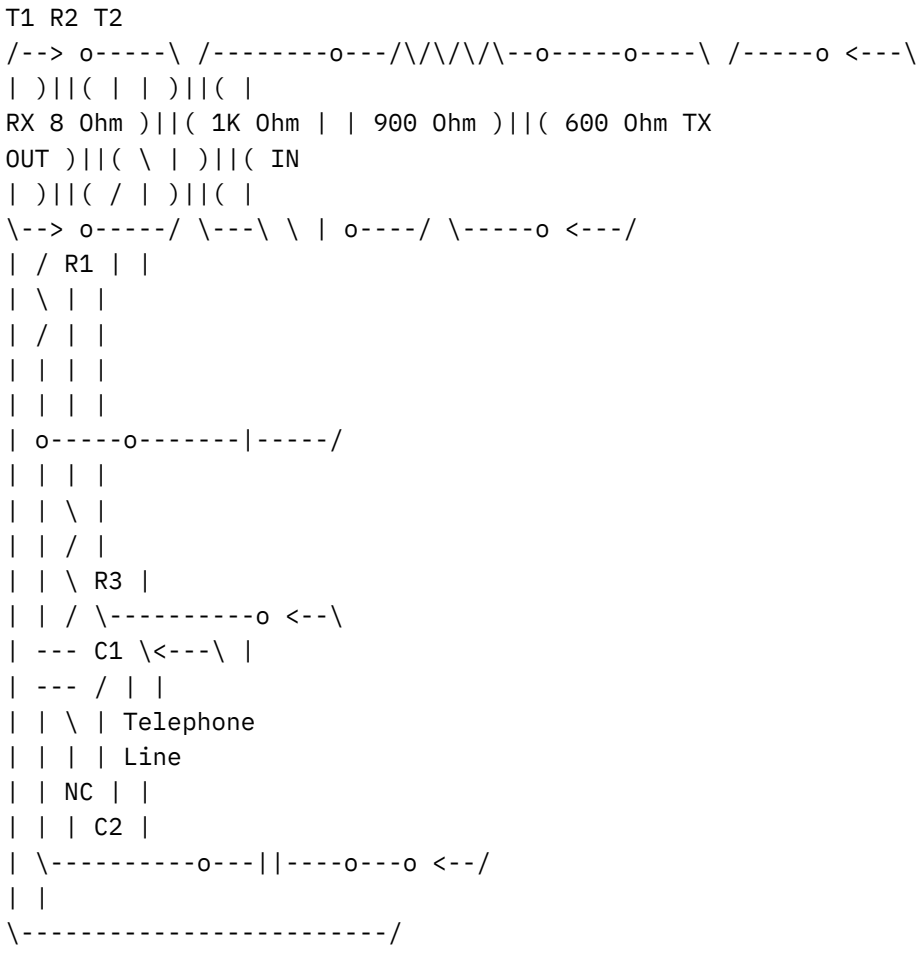
# 4264. PHONE-PATCHING (CORRECTION; OOPS!)

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-30 18:12:04 UTC
From: Radio N6BHU <n6bhu@qsl.net>
Message-ID: <Pine.LNX.4.58.0407301103020.31060@torquay.cahuenga.com>
Source record: 20116
Cross-posted to: alt.ham-radio.am,alt.ham-radio.fm,alt.ham-radio.hf,alt.ham-radio.nocode,alt.ham-radio.ssb,alt.ham-radio.vhf-uhf,alt.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.homebrew

Lo and behold, I found another text-file in my ASCII archives containing the CORRECT schematic. (The schematic previously posted has an error; C2 should connect to T1 as shown below, else the telephone line won't be properly matched, as shown in my previous posting. I should've looked it over more carefully before posting it -- sorry 'bout that!)

...Dave, N6BHU

Wheatstone Bridge Phone Patch Circuit [from the mid-70s ARRL handbook]



Parts List

T1 - 1000 Ohm / 8 Ohm audio transformer (Radio Shack 273-1380, or equiv.)
T2 - 900 Ohm / 600 Ohm audio transformer (Triad TY-301p, or equiv.)
R1, R2 - 910 Ohm, 1/2 Watt composition, or metal-film resistor
C1 - 0.04 uFd ceramic, or mica capacitor

C2 - 0.01 uFd ceramic, or mica capacitor

# 4267. Yaesu FT-857 and split operation over CAT

Newsgroup: rec.radio.amateur.equipment
Date: 2004-07-31 10:59:19 UTC
From: Hans Johansson <sm0imj@telia.com>
Message-ID: <opsbz0s5dew0s05f@wizard>
Source record: 20120

Hi all,
As you all (owners of the FT857) probably have noticed, there is no CAT
command available to set VFO A equal to VFO B.
This makes split operation a little more complex (read time consuming
when working over CAT.

Have anyone found any "un-documented commands" to solve this?
I know there is a number of "un-documented" CAT commands in the FT-857
(e.g. to set and read all the menu mode settings).

Ideas please,
cheers
Hans - SMï¿œIMJ

I have the following items for sale. Prices do not include shipping. I will ship overseas.

National Type MCN Dial.....$30 plus shipping
Used but good condition with a clean dial face
http://members.cox.net/radiostuff9/natdial.jpg
http://members.cox.net/radiostuff9/natdial2.jpg

Western Union Legless Telegraph Key.....$30 plus Shipping
http://members.cox.net/radiostuff9/wu_key.jpg

Realistic DX-160 Communications Receiver and Matching Speaker......$135 plus shipping
This is a 5 band solid state receiver that covers 150 kHz to 30 MHz. It has a BFO for CW and SSB reception and bandspread for the ham bands. This radio will run on 110 volts AC or you can run it from a 12 volt battery. Other than a few very minor scuffs, this receiver is in really nice shape and works well on all bands. I even heard some signals down in the VLF band. Includes a photocopy of the manual.
http://members.cox.net/radiostuff9/dx160.jpg

http://members.cox.net/radiostuff9/dx1606.jpg

Heathkit SB-604 External Speaker.....$40 plus shipping
This is the matching speaker for the SB-104. The speaker sounds great and is in nice shape with a few minor scuffs.
http://members.cox.net/radiostuff9/heath_sb604.jpg
http://members.cox.net/radiostuff9/heath_sb6042.jpg

Cold War Relic - Civil Defense - Radiological Survey Meter......$85 plus shipping
These are NOS meters painted in Cvil Defense yellow with a neat Civil Defense logo left over from the cold war. These were to be used for checking for radiation after a nuclear attack. Includes manual, an original but now dead vintage battery (note the 20 cent price), remote cable (not shown but stored in the unit), and carrying case. A neat collectible for your 1950ï¿½s or 1960ï¿½s station to set by your CONELRAD alarm

Schaub Lorenz "T30L Weekend" German Portable Radio.....$45 plus
shipping
This is a Portable Radio made in Germany. As near as I can determine
this radio is from the late 1950's or early 1960's. This is a 3 band
transistor radio that covers long wave, medium wave (standard broadcast
band) and FM. The radio is in beautiful shape cosmetically but it is not
working. I can hear weak audio from the speaker but no stations. Their
is no battery acid damage. The two antennas are in good shape. The
insides are clean.
http://members.cox.net/radiostuff9/schaubl.jpg

I am looking for a mic stand and mic holder that would fit a Kenwood
MC-50 microphone. Condition does not matter.

Drop me a line or post here if you have one.

Thanks
Chuck

# 4285. Re: Isotron 40m & 80m antennas (Baby Burner)

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-01 08:15:56 UTC
From: joe <joe@joe.com>
Message-ID: <UE1Pc.347$ni7.191@bignews1.bellsouth.net>
Source record: 20136

Nothing like the good old "baby burner". Old ads showed a baby in
diapers next to the antennas. During ARRL testing at 1500 watts the 75
meter "unit" burst into flames. Hence the "baby burner" nickname!

# 4286. TS-830 rotating switch?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-01 08:38:44 UTC
From: MIRek SP7JKW <sp7jkw@go2.pl>
Message-ID: <ceia6d$bo9$1@flis.man.torun.pl>
Source record: 20137

Iam looking for (buy non-working) rotating switch
and new power transformer for my TS-830S transceiver.
In Poland its impossible to find.

Can You help me?
I know - this rig produced by Trio/Kenwood 1980's
but....it was my the best radio.

Regards,
MIRek sp7jkw
sp7jkw@go2.pl

Try http://www.kenwoodparts.com/parts/find.php
Just put ts830 in the Model Number window.
The transformer is $127.33 and they list the band switch at $23.53 and rotary waffer (wafer) at
$49.70 (not sure which you need).
You can contact them via e-mail to check on shipping/customs to Poland.

Can I throw in my theory here - its based on what I have read and
stuff I have repaired. Basically, it got too hot and died - the
failure mode is as follows.
RF transistors consist of many small transistors connected in // on
the die - this enables a fairly high power output physically spread
over a wide surface area. - the progressive drop in power indicates
that these individual elements were starting to fail, until they all
did. This is caused by inadequate heat conduction from the transistor
mounts - if its a single stud mount transistor, (most modern ones are
multiple mount to ensure BETTER thermal conduction) the actual mating
area to ANY heatsink is very small and this depends on very good
conduction - usually done by generous amounts of heatsink compound.
Unfortunately the heatsink grease degrades with prolonged temperature
- if you have pulled the devices out, has the heatsink compound dried
out and gone hard - if you have to scrape it off the heatsink with a
screwdriver, its effectiveness will be minimal. Too hot - well, an old
rule of thumb is "if its too hot to touch, its too hot..." - yes, I
know devices are rated to impossibly high temperatures, but over a
long period of time (ie, years) this aint necessarily so.

So there you go - its not "bad" design as such, its just that
knowledge has improved over the years - better package design, better
heatsink compound. If you replace them, they should last as long as
the original devices before it happens again - probably longer if you
can source some hi-temp rated heatsink compound.

Another problem is that solder degrades with prolonged temperature -
the tin is "sweated" out of the solder and you are left with just the
lead holding them down - this usually means it just stops working ,

and depending on which junction was isolated first, can be cured by resoldering. Have a look at the solder to the leads - is it a horrible grey colour with a crystaline appearance - again, high temperature solder is now specified for such applications.

These problems dont come up in commercial radio service work - by the time the devices are old enough to experience these problems, they are ready to be replaced by a more modern one so they just get junked. We, as amateurs, tend to keep our gear a lot longer and so experience different problems long term.

hope this helps

Usually when I see someone bitching about Radio Shack it's from one of
the small brained no-lifers who get their kicks from going to Radio Shack
and trying to show off how much more technically intelligent they are than
the clerks behind the counter.

Unfortunately, I can't make an assessment of your web site to see if it's
of the same ilk, because it appears to be shut down.

Awww.....

Let's all say 'Too F...in Bad" in unison. Doesn't seem like you're getting
the
internet support you wanted!

If you don't like Radio Shack, why do you go there? Unless, of course,
you like the abuse you think you get, and go just to get more ammo!

Wait, I didn't come here for abuse, I came for an argument! Arguments
are two doors down on the right.

Surrrrrrrrrrrrrrrrrrrre you did. You will either continue to haul it to hamfest boneyards or you tossed it in the landfill. If you really did sell it, you sold it to some newbie, bullshitting him what a great antenna it is. Do you also do estate sales? You know, where it goes like this, "Uhhhhh, Brenda, I know some guys uhhh been buggin' you for Tom's radio stuff, but he did promise it to me, and I'll give you market value for Tom's stuff. $300 is more than fair for his tower, beams, five transceivers, two amps., and all that other junk like his dynamic microphones and computers."

Well, I find it hard to believe that, in a weak moment, I visited the site mentioned below. It is obvious that a great deal of time and effort has gone into this thing, and to what cause? To save our rights? Me thinks not. What rights are we having trampled? You're right to slander RadioShack? That right is only in your mind. You are most likely a relatively well educated individual with many personal conflicts in his life and I feel deeply for you, but mostly your parents and family members. They most likely put up with your drivvel year after year and detest the site of you.

Why don't we just cut to the chase, and you explain, in a very short sentence or a very, very short paragraph what caused you to create this Radio Shack site that you claim sucks so bad that it has obviously destroyed your life and those of your loved ones? When They haven't harmed you. You are harming them by saying to the world that they suck.

I have enjoyed Radio Shack for many years. I was there when they became RadioShack, and I became a valued customer (I believe that because I still get free catalogs in the mail, not many do anymore 'ya know) to them and grew through the whole gammit of stuff they have added over the years and I must say that when I had a problem with a product, and that was extremely rare, they took care of it. In one case the manager returned my money because it was a last item and he couldn't replace it. A few years later when computers came along if this had happened, they could check all the stores in their system to see who still had it on the shelf and that store would mail it to me at my home. Is that cool? I say "Yea Verily".

I love Radio Shack. This little reply is probably enough to get you to open up KF5DEsucks.com I won't sue you unless you get nasty. All my friends will check in and post there I'm sure they will have comments to make there, they have a lot of freee speech to use 'ya know. I have a friend that can enlist, in moments hundreds of hackers that believe in not only free speech but free hacking tooo!! Free viruses', free wurmzs, 'n free other stuff too.

After that you can open up another site, KF5DEreallysucks.com

Or, you can channel your efforts into something productive and usefull and possibbly profitable for yourself and your suffering family which will no doubt heal many open wounds.

Butch Magee, KF5DE
Diamondhead, MS 39525

Hello, I have an Icom 706 that is close to my Computer. I know I could move it, but I was wondering is there a way to take away the noise from my Hard drive that I get on SSB on my 706? If I shut down my PC, SSB is very quiet, but when I fire up my PC it is Noisy. I did narrow it down to the HD. Just wondering if anyone has any ideas such as shielding or anything like that? thanks in advance.

hi dustin,

try putting a ferrite over the power leads that exit the power supply inside
the pc,
that should clean it up a bit.

We have
a working 2.4GHz . multi channel surveillance monitor with receiver and detachable SMA antenna plus micro high powered, weather resistant 2.4GHz wireless video sender (transmitter) with 900mW output at antenna. Surface Mount s-band (2400 MHz) amplifier mounted to micro transmitter unit. Unit has voltage regulation at 5VDC. Just add your camera or video source and you have a great, custom surveillance system. Unit (receiver) will work on many other types of commercial 2.4GHz receivers. Dip switch selectable channel switch on receiver and transmitter. The pinhole Black & White 1/3" CCD Board camera is included with this auction (normally an additional $35) Receiver unit runs on 4 AA batteries or 6 V regulated wall supply. Receiver can also act as a stand alone video monitor by switching the toggle switch below the video input connector. We accept POSTAL MO, some business checks (with clearance time) and Western Union payments. Asking $175 plus shipping. More photos available upon request. Units are great for ATV or model video.

Look in the BIOS and see if the clock options include turning on spread
spectrum clocking. That'll reduce the noise somewhat.

Source record: 20160

These are 2 piece feedthrough, takes a 3/4 inch chassis hole.
Excellent for high voltage supplies, tuners, antenna feedthrough
plates etc. 10 for $10 plus shipping. I still have quite a few left.
Have jpeg Thanks and 73s Lew K1NDV

# 4310. Ham Radio Banner Exchange

If you have a Ham Radio related website and are
looking for more exposure for it consider joining
The Ham Radio Banner Exchange Program.

For more information you may visit the link below
http://www.cq-cq.com/bp/index.html?ve7dao

In the few months that www.RadioZone.info had joined
the banner exchange program it had received a nice boost
in traffic.

It does not do automatic scanning. It will tune all sorts of freqs but
you gotta manually tune to it. The audio is great too.
How about 285 with no antenna.

Hi All;
Here is an interesting set of Five(5) NOS N-U control pots that were made during WWII(1942). They are Cat#2MEG-tx(tapped) with on/off switch if activated by pulling a tab!
They are Sav-a-Shaft design which means that "to help out the war effort" you cut off the old shaft & tap it into the new pot with has a collar.
Switch is rated at 3A@125v or 1A @250v
I have not tested them because they are nos in original boxes.
Anyone need any?
5 for $20ppd!

HF Linear Amplifier 80-10 meters single Eimac 4-400 with
separate RF Deck and Power Supply.
Nicely built the RF Deck looks like a Henry.

Output is adjustable with a simple change in value of a grid resistor.
Spare Eimac 4-400 NOS - tested however no hours,
both tubes in great shape.
Prefer pick up - the powersupply is heavy. $275

# 4330. WTB - Mobile Many-Band radio - Ideas? Thoughts?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-04 16:51:37 UTC
From: rjvalenta@yahoo.com
Message-ID: <cd88be12.0408040851.315ad0b3@posting.google.com>
Source record: 20179
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap,alt.ham-radio.marketplace,rec.radio.amateur

I've had my ticket for over 10 years, but just never got into things until recently. Everything I had until now was UHF, but there's so much more to be heard in 6m, 2m, 220, 900, 1.2ghz, right?

But who wants to end up with 6 mobiles, 4 antennae, blah blah, etc. So I'm looking for advice. A million years ago Icom made the IC900 and IC901, which could add modules for almost anything (but cost a fortune, and are impossible to find). Was there progress? Did anyone else pick up the torch where this left off? What's today's comparable version?

And why is it that the TM742 from Kenwood can hold 3 modules but there are 6 available? How come my 10 year old Alinco DJ580 can scan AM Airline freq's but thats so uncommon today? I remember a time when amateurs wanted to pack as much as possible into their rigs and do it all, is that no longer the case?

And what do people who know more than I reccomend? I get online and look around, and it seems like used tri-bands are the only option, and Kenwood being the only manufacturer which has one which can listen to more than one band at a time. I have a small car, but there is space equal to the size of the average auto stereo free to install a mobile rig. I would love to be able to load up all the local repeaters, and whatever else I'd want to listen to (fire, ems, 800mhz police, air) - and maybe even program it alphanumerically.

So tell me Gods of amateur radio - does such a model exist? Is it possible to get a small unit that can function as a police scanner, alphadisplay, 6m/2m/144/220/70cm/900/1.2gz tranceiver (or some 3 or 4 band mix)? Or am i destined to search for a larger car, mount 7 pieces in it, and drive a porcupine?

Thanks all, I look forward to hearing back in every capacity. And if you have an old IC900 or IC901 or Kenwood TM742, or any commercial rigs that may work (I've got mainly Motorola Saber stuff now) let me know via email.

Richard,
Well, I was also 'out' for a while and got back in about 5 years ago...I am not THE expert, but I believe what you ask for does not exist. There just isn't enough activity (worldwide) on 222 900 & 1296 to attach those bands to an 'all-band' radio.
Now, I don't know you budget...

HOWEVER, look VERY CLOSELY at the Kenwood TM-D700A mobile and the Kenwood TH-F6A hand held. I think these come quite close. There is also the Yeasu VX5R (not 100% sure of number), but its Rx doesn't go as high. There's a Yeasu hand held which has 6M, 2M & 440 Tx - don't remember if it is the VX5 or not.

The two Kenwoods I mention cover close to what you ask for RECEIVE.

The D700 mobile is Tx on 2M & 440, and Rx FM from 108 (AM in air band) to 1300.

The F6 hand held is Tx on 2M 222 & 440. Rx from 0.100 Mhz to 1300 MHz -- AM, FM, Wide-FM, SSB, & CW (some limitations, but pretty much everything you can listen to). Just remember that it is still a handheld and therefore has minimal front end filtering (as is more common for the general coverage Rx).

1296 Tx is rare. The Kenwood TS-2000 has it (and 1-2 others), but the 2000 is a 160 through 2M, (222 Rx) 440 & 1296 all mode. It does have a mobile remote control head.

I don't think there is (hardly) any Ham-commercial equip for 903.
Look for Alinco and Ten-Tec. I'm not familiar with their products.
73,

I am looking for a few items that fit the R71A Receiver.

1. FL - 44A
2. CR - 64
3. IC - EX309
4. IC - EX310

If you have these in good condition and working, please email
with price and your location. If you know of someone that has these
items, please have them contact me or give me a name and phone number.

Thanks,

Owen KB5XE >>>>>>>> Good in QRZ Data Base.

Hi Randy,

You're the first person to even offer! As long as I can
read it with my feeble eyesight, a scan will be fine.
You can scan it in sections, if you like. File size is
not a problem as I'm on a high speed network here.

There is no hurry on this. Whenever you get the time.

THANKS and 73,
Dean K5DH

Hi, I hope this is the right group for this post.
I work in a busy warehouse with allot of battery powered equipment that causes interference in AM broadcasts.
What I want to do is make a box that receives AM stations and rebroadcasts the signal on a small FM transmitter (on a unused frequency ).
This way I can listen to baseball and hockey games while I work.
Does anyone have an idea on how this can be done? How much it would cost and what it involves?
Any info would be appreciated. Thanks in advanced. Denny

Check out the kenwood ts 2000, as it covers 160m - 1.2ghz without 220 and 903.

Icom,Kenwood and Yuaesa have some hf/vhf/uhf radios on the market. They also have quad band vhf/uhf equipment. Icom also has a multiband vhf/uhf rig with optional band modules, but it is pricey. Down East Microwaves have transverters for 900 and 1296.

# 4341. Ground Radials - a new look!

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-05 09:51:56 UTC
From: Reg Edwards <g4fgq.regp@ZZZbtinternet.com>
Message-ID: <cesvvs$9ll$1@sparta.btinternet.com>
Source record: 20193

NOW AVAILABLE ** New Program "RADIALS2.exe"

This program takes a fresh, revolutionary look at the design and performance of a set of shallow-buried ground radials. Gone at last are the days when 118.5 was a sacred number.

A radial wire is considered as a lossy transmission line, there being no point in having it any longer than that at which its input impedance Zin has converged on its characteristic impedance Zo. The current flowing in the line at that distance from the input end is clearly small enough not to warrant extending the radial any further. With a crude knowledge of the resistivity and permittivity of the soil the greatest practical length of radial wires can be calculated. The number of radials can then be estimated on the logical grounds of economics versus antenna + transmitter radiating efficiency.

Download program RADIALS2, 53 kilobytes, in a few seconds from website below and run immediately.

# 4342. HOW TO FIX a wide trace (noise) on Tek 465 and 475 scopes

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-05 13:19:09 UTC
From: tomg@fullnet.com
Message-ID: <11915d6.0408050519.70a77600@posting.google.com>
Source record: 20194

---

HOW TO FIX a wide trace (noise) on Tek 465 and 475 scopes:

---

I have posted a detailed procedure (another free freebie) for
fixing a wide or noisy/fuzzy trace on Tektronix 465 and 475
(most or all Tek 400-series) oscilloscopes [i.e. cleaning the
Volts/Div Attenuator (and Bandwidth Limiter and Trigger View)
switch contacts], at:

==========

http://www.fullnet.com/u/tomg

==========

It may work wonders for your scope. And you can probably do it
yourself, even if you've never opened a scope, before.

It will also usually help repair cases where changing the
volts/div switch causes trace distortion, or intermittently
gives the wrong vertical amplitude (v/div gain error/problem).

Cheers,

Tom Gootee

There was a thread about this kind of thing in r.r.a.antenna not to long ago. Included was the following link:

http://www.ramseyelectronics.com/hk/default.asp?page=amfm

They have a variety of AM and FM transmitters at a variety of different prices. They are listed as kits but they are pretty simple to solder together. Just feed it with the output of a standard AM radio and keep the range limited. Information on the FCC rules and regulations governing this type of setup is available at:

http://www.ramseyelectronics.com/resource/default.asp?page=fcc

This is just one of the places to get this equipment. Other people may have other links.

Thanks for all your replies, they have been helpful.
What I don't know is what range I could expect with a warehouse full of metal racks and freight? The warehouse is about 450 X 450 feet.
Also is there a way the transmit 3 FM signals , on different frequencies, from the same antenna? I have 3 AM stations I want to retransmit and its looking like I am going to need three AM radio and 3 FM transmitters. Is there another way? Thanks for you help.

brue focre...3 AM radios, 3 FM transmitters, 3antennas, no switches ,,,
if it's one AM radio you'll need to tune it somehow and use one FM
transmitter..
get a pushbutton AM radio and all you'll have to do is push a button..
convert an old car radio..or...
get one of the new digitals with a remote that's work the distance, some
might..

His problem is that there is interference to AM radio, so using an AM
radio to feed an FM radio isn't going to solve anything unless he can
locate the AM radio somewhere that it won't pick up the interference.

Hello,

This is kindo of an odd question, I know.. I'm looking for the model number (and anyone who wants to sell one, dead or alive?) an older model Zenith (I think it's a Zenith) color TV, about 14 inch diagonal. The whole set was about 12 inches on a side, and was almost a perfect cube shape. It had a white case with a integrated carrying handle that folded out (on a spring) from the top. It had front panel digital tuning and volume control, a headphone hack on the side, and no remote (that I'm aware of)

The interesting thing abuot this was that the construction was that almost ALL the circuitry was discrete compoent. There was 1 IC I could see - which I think was either a tuning chip (or generated a signal for a traditional RC tuning circuit), or a volume chip. The power supply was on the left (looking from the screen), with a cable in on the right. 2 screws held on the cable input plate, 1 screw on either side held the white case onto the chassis. Air vents were on the top.

Does *anyone* have an idea of what TV I'm thinking of? It fit just right above our sink, and my mother made me get rid of the old one.. I wanted to repair it - after all, unless one of the picture-tube anodes was shot, it's quite likely that the fault was in some discrete component, which of course could have been replaced..

But, alas, my mother (and father) don't understand about such things - "it cost $90 to replace the picture tube the last time it was hit by lightning" - BTW, the power supply still worked, as well as (some part) of the audio circuitry.. - well, $90.. probably $40 of that was profit/labor, leaving $50 for the 'tube'. At a standard 15% markup from wholesale to retail, that about $35.. And it could very well have been on the video board and not the *vacumm tube* at all - they'd just replace the whole damn module as one and not bother looking for a single $0.50 blown cap..

Grr.. I should have gone to Purdue and majored in electrical engineering..

Jim

# 4358. DATRON 1051 multimeter help

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-06 12:54:46 UTC
From: Maurizio Tamburini <maurizio.tamburini@aliceposta.it>
Message-ID: <qcLQc.106464$5D1.5299590@news4.tin.it>
Source record: 20060

Having been sold a Datron 1051 multimeter with a missing IC, I am looking someone owning the same to tell me which code the IC has.
I can send the picture of the printed circuit where the IC should be. Thanks for your help.
Maurizio

# 4359. For sale or trade

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-06 16:58:28 UTC
From: John Schneider <thecop@optonline.net>

Source record: 20061

I have the following items for sale or trade:

1- Icom IC-R8500 (full coverage) in as new condition. Has been covered by a custom cover when not in use and has no dings nor scratches. Will sell for $950 (firm) or trade for a Drake R8B in as new condition.

2- Bencher BY-1 in very good condition ("Bencher" label has a small scratch). Will sell for $70 or trade for a quality straight key.

3- Yaesu AD-3 Duplexer in excellent condition. Will sell for $40 (I ship) or trade for ??

My eBay rating can be found under NPDXO.

Please contact me direct if interested.

John Schneider, KB2COP

Hi,
I have an old Alinco EP-2510 power supply that I would like to adjust the output slightly upwards.
Have about 12.5V (without load 12.1V with 17A load) and would like to drag it up about 1V to 13.5V.
The problem is that I don't have any manual or circuit description.
Anyone that could give me a hint about where to adjust?

cheers,
Hans / SM0IMJ

Thank you everyboby for you help. I am looking into some of the links that were sent to me. I just need to figure out how to make the antennas so that the signal will reach the outer walls of the warehouse.
JJ, I want to put the AM radio in the ceiling where the signal can come in clear. The interference is from the battery operated forklifts and pallet jacks that we drive around.
Thanks again everyone, Denny

# 4363. Data Precision frequency counter 5740 question

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-07 07:12:15 UTC
From: R C <yeah.right@example.com>
Message-ID: <L9WdneZ3yZ9QHYncRVn-oA@comcast.com>
Source record: 20065

Hello. I picked up a frequency counter cheap at a hamfest a couple of weeks ago. Playing with the thing, I've found several shortcomings and am wondering if it's broken or just operator error.

The period measurement seems to work just fine over the first three ranges, but not the forth (10 sec gate time.) The frequency measurement just counts up till it hits overflow. It works from at least 1KHz-2MHz, but not at 4 MHz.

Is it worth trying to fix? It looks like a manual for the thing will cost at least twice what I paid for the unit itself. Or am I better off scrapping it for parts?

Thanks,
R C

Yes it does.
That's what overflow means.

It works from at least 1KHz-2MHz, but not at 4
> MHz.
>
> Is it worth trying to fix? It looks like a manual for the thing will cost at
> least twice what I paid for the unit itself. Or am I better off scrapping it

What does it NOT do that you need to do?
If the answer is "nothing", it ain't broke.
If the answer is "anything else", it still ain't broke.

I kind of expected a direct frequency readout. X many cycles per gate time.
This
just counts and counts. Then again, I don't have a manual.. but there aren't
exactly
a lot of controls.

Well.. Something better than 2 mhz, I think. I was hoping this was a simple
problem; if not, it's simple enough to salvage the LED display and counters
and build a new one out of an AVR or PIC. I think the rated speed is around
100 MHz for this unit, which is why I'm suprised it doesn't work at 4.

Thanks,
R C

The 10 second gate time will open the input gate for 10 full seconds.
You may be running into the resolution limitation of your display.
How many digits do you have? If you want a direct frequency readout
start cutting down on the gate time. If you use the 1 ms gate time you
should be able to read everything directly in KHz, + or - a KHz.

But your are better off trying to get a manual. Otherwise you really
don't know the input specifications. The specs will tell you the
frequency limitations and probably give you some example setups.

IMHO never scrap anything that seems to work. It's at least worth
the extra research for a manual. Then it might even be sellable.

One lot of QST for sale as a complete lot only
1928 -2000
1928-37 ,39,41,44,46-48,71,72,80-2001 are complete
other years are missing various issues
$150 for the lot
Pickup only in SE Mass
for complete list reply to superbeetle101@hotmail.com

# 4389. For sale or trade

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-08 20:58:39 UTC
From: John Schneider <thecop@optonline.net>
Message-ID: <3uwRc.43016$zc4.16503132@news4.srv.hcvlny.cv.net>
Source record: 20091

I have the following items for sale or trade:

1- Icom IC-R8500 (full coverage) in as new condition. Has been covered by a custom cover when not in use and has no dings nor scratches. Will sell for $950 (firm) or trade for a Drake R8B in as new condition.

2- Bencher BY-1 in very good condition ("Bencher" label has a small scratch). Will sell for $70 or trade for a quality straight key.

3- Yaesu AD-3 Duplexer in excellent condition. Will sell for $40 (I ship) or trade for ??

My eBay rating can be found under NPDXO.

Please contact me direct if interested.

Standard C468A LNIB $100

Standard C568A 95%+ with extended range mod. $185

Icom 02AT with wall wart.
Icom BC-35 plus extra Ice brick battery $ 65

Icom IC-229H 90% $ 85

Icom SM-8 Like new. $100

MFJ-1272B Set up for the IC-229H $ 20

Maha MH-C777 Universal Charger-Conditioner LNIB $ 25

Dynamic Communications
Model A470-25 $ 20
Sold as is, no manual.
Model 10-0 $ 20
Sold as is, no manual.

Carver Mobil Audio Amp 95+%
Model M-2120
$ 75

All items will include manuals unless noted.

I have a lot of older computer parts/MOBS-CPUs/boards
ect. Everything from Rll,MFM to SCSII controllers.
contact me for what you are looking for.
I have an External Scsii CdRom changer that uses Pioneer
carts.

I also have a lot of C64's 3 good 3-5 fixable or parts.
Including a portable with screen that is fixable.
Assorted peripherals - drives,printer,parallel/serial ports,
modems, tape drive, graphics pads, joysticks, ect.
A lot of cartridges, and software - games to productivity.
Included are extra books for programming ect.
Plus software to run a bbs from the C64..

I would like to sell it all as one group. Will cost more,
if sold piecemeal....

$150 takes it all on the C64 equipment.

Shipping is NOT included

[SYNTOR] [SYNTOR X] [SYNTOR X 9000 and X 9000E] [TRUNKING SYNTOR X and SYNTOR X 9000]

Introduction:

This page has model charts and information for the original Syntor radios. These radios are very different from any other radio with Syntor in their name.

Programming is done outside the radio and uses a different one time only PROM memory chips for the frequencies and PL tones (the PL tones are optional). When you program a channel or PL tone into one of these chips it can never be changed or reprogrammed again. You must get a new chip and start over. These chips have not been made in years and

it is very hard to find ones that have not already been programmed. Be aware some substitute part number chips will work in the radio, but require completely different programming hardware than the chip Motorola used. Batlabs has more information and links about programming these radios. The links page also has programming software links.

This site also has a construction project to convert the Syntor frequency PROM over to a standard 2716 or 27C16 EPROM, along with accessory part numbers, standard Syntor cabling and other information. Unlike the standard PROM the 2716 EPROM can be erased and reprogrammed with the right equipment.

Locating radio model numbers:

Please see the locating radio model numbers instructions on the home page.

Locating radio unified chassis numbers:

On several VHF radios I have found the unified chassis number stamped in ink on the preselector housing (next to the optional receiver preamplifier plug-in slot). The number was abbreviated with the "HU" part missing and ended with the letter O (i.e. D10370). The factory frequency list on the VCO cover confirmed this was the correct unified chassis number.

VHF Model Information:

SYNTOR VHF MODEL CHART
T T = Trunk Mount
_ 4 = 40 watt, 6 = 60 watt, 8 = 75/110 watt adjustable
3 3 = VHF
_ _ _ SRA = Standard Radio, TXA = Secure Capable
_ 1 = Carrier Squelch, 3 = PL Squelch, 6 = DPL Squelch
_ 1 = 1 channel, 9 = 4 ch., 2 = 8 ch., 8 = 12 ch., D = 16 ch., J = 16 ch. with Talkaround
00
_ A, B, C, etc. revision
K K = Package radio sold with accessories (microphone, speaker, etc.)

Just fill in the blanks on the left side of the table with your model information and use the right side of the table to decode your model information.
The 16 channel with Talkaround is really a 32 channel radio.

SYNTOR VHF UNIFIED CHASSIS NUMBERS
Chassis # Description
HUD1036A 136-144 MHz, 40 Watt
HUD1037A 146-150.8 MHz, 40 Watt
HUD1038A 150.8-162 MHz, 40 Watt
HUD1039A 162-174 MHz, 40 Watt

HUD1041A 136-144 MHz, 60 Watt
HUD1042A 146-150.8 MHz, 60 Watt
HUD1043A 150.8-162 MHz, 60 Watt
HUD1044A 162-174 MHz, 60 Watt

HUD1047A 146-150.8 MHz, 75/110 Watt
HUD1048A 150.8-162 MHz, 75/110 Watt
HUD1049A 162-174 MHz, 75/110 Watt

The VHF radios have an optional Rx preamp (HLD4051A 136-144 MHz, HLD4052A 146-174 MHz) that is plugged into the radio, jumper JU101 is removed, JU102 is checked to be sure it is installed and then it is aligned (i.e. it is field installable).
The 75/110 watt power level can be selected and adjusted on the test bench (these are on the T83 model radios only).

SYNTOR VHF VCO MODEL NUMBERS
Model # Description
HLD4035A Range 1 VCO - 136-144 MHz
HLD4036A Range 2 VCO - 146-156 MHz
HLD4037A Range 3 VCO - 150.8-162 MHz
HLD4038A Range 4 VCO - 162-174 MHz

The above 4 VCOs are all the same, except for the connections on the tuning pads and the range 1 VCO has a slightly different value C1312 capacitor.

VHF Railroad Model Information:

SYNTOR VHF RAILROAD MODEL CHART
R R = Railroad
_ 3 = 30 watt, 4 = 45 watt
3 3 = VHF
RW RW = Standard Railroad radio
_ F = 36/12 VDC, G = 36 VDC, E = 12 VDC, C = 64/12 VDC, H = 64 VDC
11
8 8 = 12 ch.
0
_ A = AAR Compatible Radio, D = Clean Cab Radio, E=Radio Only

Just fill in the blanks on the left side of the table with your model information and use the right side of the table to decode your model information.
The AAR Compatible Radio uses the standard AAR mounting system.
The Clean Cab Radio uses a mounting tray mounting system.

SYNTOR VHF RAILROAD
UNIFIED CHASSIS NUMBERS
Chassis # Description
TLD2383A 150.8-162 MHz, Upper Housing Kit, 12 VDC
TLD2384A 162-174 MHz, Upper Housing Kit, 12 VDC

TLD2373A 150.8-162 MHz, Upper Housing Kit, 64/12 VDC
TLD2374A 162-174 MHz, Upper Housing Kit, 64/12 VDC

TLD2513A 150.8-162 MHz, Upper Housing Kit, 36/12 VDC
TLD2514A 162-174 MHz, Upper Housing Kit, 36/12 VDC

TLD2403A 150.8-162 MHz, Lower Housing Kit
TLD2404A 162-174 MHz, Lower Housing Kit

The VHF radios have an optional Rx preamp (HLD4052A 146-174 MHz) that is plugged into the radio, jumper JU101 is removed, JU102 is checked to be sure it is installed and then it is aligned (i.e. it is field installable).
The model number is required to find out what voltages your particular radio requires.

UHF Model Information:

SYNTOR UHF MODEL CHART
T T = Trunk Mount
_ 3 = 30 watt, 4 = 50 watt, 6 = 75 watt, 7 = 100 watt
4 4 = UHF
_ _ _ SRA = Standard Radio, TXA = Secure Capable
_ 1 = Carrier Squelch, 3 = PL Squelch, 6 = DPL Squelch
_ 1 = 1 channel, 9 = 4 ch., 2 = 8 ch., 8 = 12 ch., D = 16 ch., J = 16 ch. with Talkaround
00
_ A, B, C, etc. revision
K K = Package radio sold with accessories (microphone, speaker, etc.)

Just fill in the blanks on the left side of the table with your model information and use the right side of the table to decode your model information.
The 16 channel with Talkaround is really a 32 channel radio.
SYNTOR UHF UNIFIED CHASSIS NUMBERS
Chassis # Description
HUE1036A 403-430 MHz RGI, 30 Watt
HUE1037A 450-470 MHz RGII, 30 Watt
HUE1038A 470-494 MHz RGIII, 30 Watt
HUE1039A 494-512 MHz RGIV, 30 Watt
HUE1121A 403-430 MHz RGI, 30 Watt, Rx Preamp
HUE1122A 450-470 MHz RGII, 30 Watt, Rx Preamp
HUE1123A 470-494 MHz RGIII, 30 Watt, Rx Preamp
HUE1124A 494-512 MHz RGIV, 30 Watt, Rx Preamp

HUE1041A 403-430 MHz RGI, 50 Watt
HUE1042A 450-470 MHz RGII, 50 Watt
HUE1043A 470-494 MHz RGIII, 50 Watt
HUE1044A 494-512 MHz RGIV, 50 Watt
HUE1131A 403-430 MHz RGI, 50 Watt, Rx Preamp
HUE1132A 450-470 MHz RGII, 50 Watt, Rx Preamp
HUE1133A 470-494 MHz RGIII, 50 Watt, Rx Preamp
HUE1134A 494-512 MHz RGIV, 50 Watt, Rx Preamp

HUE1046A 403-430 MHz RGI , 75/100 Watt
HUE1047A 450-470 MHz RGII , 75/100 Watt

HUE1048A 470-494 MHz RGIII, 75/100 Watt
HUE1049A 494-512 MHz RGIV, 75/100 Watt
HUE1141A 403-430 MHz RGI , 75/100 Watt, Rx Preamp
HUE1142A 450-470 MHz RGII , 75/100 Watt, Rx Preamp
HUE1143A 470-494 MHz RGIII, 75/100 Watt, Rx Preamp
HUE1144A 494-512 MHz RGIV, 75/100 Watt, Rx Preamp

The UHF Rx preamp is not field installable.
The UHF manual states "HUE1036 to HUE1049 is replaced with HUE1121 to HUE1144 for RF Preamp models". The numbers above is what I interpreted this to mean (i.e. I hope I got it correct).
The second digit of the model number (i.e. T64 or T74) will indicate the output power. T63 is 75 watts and T73 is 100 watts.
As an example try this model number; T44TXA3800BK. It is a trunk mount, 50 watt, UHF, secure capable, PL squelch, 12 channel, B revision radio. To find the frequency range look at the frequency list on the VCO cover then find and match up the unified chassis number or locate the Unified Chassis number inside the radio.

PAC-PL and PAC-RT VEHICLE REPEATER MODEL INFORMATION
Please see the PAC page for this information.

Service Manuals:

Motorola manuals have a revision letter at the end of the manual part number (i.e. 68P81043E40-O is an "O" revision and 68P81043E40-B is a "B" revision). These revision letters separate the older manuals from newer ones. The -O revision is for the original manual in that part number series. Keep in mind, that Motorola will sometimes supersede a series of manuals for a particular radio with a new manual that has a new part number. When they do this, the first manual with the new part number will be a -O revision, but it will be newer than any of the manuals with the old part number, regardless of the old manual revisions. For this reason, not all manuals with an "O" revision can be considered "OLD" manuals.

Motorola has been know to drop valuable information from manuals as they release newer revisions. When different internal circuits of a radio are redesigned and given new assembly numbers, the information (schematics, parts lists, etc.) for the old assembly number can be completely dropped in a newer revision manual. If you work on these radios, sometimes you may need a specific older or newer version of a manual. When I have the information I will attempt to point out important differences in different manual revisions.

SYNTOR Radio Service Manuals
Part # Description Models
68P81043E40 VHF 136-174 MHz, 40/75/110 Watts T43, T63, T83
(SRA)
68P81048E70 VHF DVP, 136-174 MHz, 40/110 watts T43, T83
(TXA)
68P81044E90 RSX-410 Railroad, 150.8-174 MHz, 30/45 Watts R33, R43

(RW)
68P81043E45 UHF 403-512 MHz, 30/50/75/100 Watts T34, T44, T64, T74
(SRA)
68P81048E75 UHF DVP, 403-512 MHz, 30/50/100 Watts T34, T44, T74
(TXA)

The radio service manuals revisions ending in -O are not as complete (i.e. missing things like the optional PL board documentation). The -A manual revisions has the PL board documentation, early version / later version printed circuit Main Board layout drawings and early version / later version Interconnect Board layout drawings.
The VHF manual 68P81043E40 and the UHF manual 68P81043E45 were $ 16.50 and $ 17.25 respectively, brand new from Motorola the last time I checked.

SYNTOR Accessories Service Manuals
Part # Description
68P81106E45 Systems 90 Touch Tone Encoder
68P81106E46 Selective Signaling Touch Tone Decoder
68P81102E25 Micor System 90 Quick Call Selective Signaling Decoder
68P81102E27 Systems 90 Quick Call II Mobile Paging Decoder for Mitrek / Syntor X
68P81106E59 Syntor System 90*s Multiple Private Line Encoder
68P81102E31 System 90 / System 90*s Single Tone Encoder
68P81108E05 Systems 90 / Systems 90*s Electronic Siren and Public Address System
68P81109E75 Mobile Public Address
68P85900C35 Systems 90 Voice Privacy Adaptor

68P81110E62 Syntor System 90*s Accessory Group Installation
68P80200W07 Syntor Systems 90*s Accessory Group Installation (MDC600, MVS20)
68P81111E87 Syntor Railroad Radio RSX-410 Series PROM Module Security Set Screws
68P81102E60 Handset Hangup Units
68P81114E07 Touch-Tone Encoder Palm Microphone
Please see the PAC page for manual information on the PAC-PL and PAC-RT.

Some of the above accessories are also compatible with the Syntor X radios, but some are not compatible.
The 68P81102E27 Quick Call II manual is for the version that uses reeds. There is a newer one that does not use reeds that I have not located the manual for yet.
This is not a complete list of all the manuals.

Test Equipment Service Manuals
Part # Description
68P81069A78 Radio Test Set R-1033A, RTL-4118A and RTL-4119A
68P81123E37 RTK-4043A Cable (R-1033A) for Micor, MSR2000, Syntor, Syntor X Radios
68P81011A01 Portable Test Set Models S1056A, S1057A, S1058A and S1059A
68P81121A01 Tek-37 and Tek-37A Test Set Cable Adapter (S1056A-S1059A)
68P81069A30 "Digital Private Line" Test Set SLN-6413A
68P81021A05 S1053C A.C. Voltmeter
68P81069A94 R-1011B 40 Volt, 40 Amp., Variable Bench Power Supply
68P81069A34 R-1200A Service Monitor

The above test equipment is called out in the "maintenance and troubleshooting" section of the radio service manuals.
The R-1033A is an improved version of the basic S1056A. The R-1033A also has Sinad included. The R-133A comes in its own carrying case with a storage compartment lid.
The RTL-4118A is a R-1033 test set installed inside the lid of a R-2001 service monitor instead of its own case.
The RTL-4119A is a R-1033 test set installed inside the lid of a R-2200 service monitor instead of its own case.
The Syntor requires manual tuning procedures for its programmed frequencies. The S1056 or R-1033 makes tuning up the Syntor radio much easier and quicker.
These are the only test equipment manuals I have part numbers for.

Programming:

The Syntor can be programmed with the original Motorola R1800/R1801 series suitcase programmer, EPROM and adapter. Or you can use one of the many aftermarket programs to create the program then burn the PROM in a PROM programmer. Check the Syntor page on http://www.batlabs.com/ or the links to find some of the programs. Some of them let you select high or low receiver injection, which is good trick to retune the 150.8 MHz range radio for HAM use without modifying the VCO tuning pads.

Audio Routing:

The receive audio routing is all done through the radio cable pins J6-20 (Detected Audio), J6-2 (Volume - Receiver Audio) and J6-25 (Sidetone). J6-20 is the received audio output that goes to the volume control in the control head. J6-2 is the received audio input that gets the received signal from the control head volume control. All of the receive audio shaping (RAS) is done internally after the J6-2 volume control connection. J6-20 Sidetone is an audio input for external options to send alert signal tones directly to the radio's speaker. The alert tones are basically square wave signals like beeps, not normal undistorted audio sine wave signals. Instead of having alert tones, the Sidetone input can also be jumpered (JU451 and JU453 installed) for direct sine wave audio input to the audio amplifier (no

RAS conditioning is used on this direct connection and a shielded cable wire should be used for sine wave signals). The later models of the Interface Board have a second duplicate Sidetone connection at J6-6.

The transmit audio routing is show in this drawing. As shown J6-15 Mic. Hi is pre-emphasized, deviation limited and filtered (i.e. the filter removes the splatter). J6-27 can be used for external Tx encode PL/DPL audio or high speed data audio (never both PL/DPL and data at the same time). The Interface Board jumper JU3 can be installed to enable this external connection when no internal PL/DPL Board is installed in the Syntor. Some of the optional internal PL/DPL boards have their own built in jumpers that do the same job as JU3 as well as allowing their PL/DPL encode audio to be disconnected. The drawing also includes an optional J6-18 custom modification for repeater audio Tx conversions and low speed data Tx audio.

Audio Muting Interface:

The received audio J6-20 (Detected Audio) is sent to the control head squelch control potentiometer and back to the radio's internal squelch hybrid via J6-19 (Squelch).

The receive audio muting interface is available on later model Interface Boards at J6-7 (Channel Activity), J6-24 (Audio Mute) and J6-35 (Detected Audio Disable). Early Interface Boards will require custom wiring for these connections (only if you need them).

The Channel Activity and Audio Mute outputs are generated internally by the squelch hybrid circuit. When the Channel Activity line is active, it simply means the receiver has detected a received signal (it can also mean the squelch control is adjusted to open the squelch when no received signal is present). The Channel Activity does not care about any received PL or DPL signals (i.e. it will be active even when the PL or DPL does not match the received decode PL or DPL, if the PL/DPL option board is installed). Channel Activity is not used all by itself for the squelch decision to mute the receiver audio, so it is processed and sent to the squelch hybrid Audio Mute output. When the squelch hybrid Audio Mute output is high, the received audio section is muted and when it is low the received audio is active (i.e. you can hear the received signal in the speaker). These high and low squelch hybrid Audio Mute output voltage levels are not appropriate for driving external control circuits like a repeater controller, so a custom single transistor switching circuit must be used to condition this signal if it hooked to an external device. The squelch hybrid Audio Mute output is sent to J6-24 where it can be used as an output. The J6-24 Audio Mute can also be used as an external input to control the audio muting by imposing + 5 volts on this pin or by grounding it through a 220 ohm resistor. This is how the internal optional PL/DPL Board controls the Audio Mute when decoding a proper Rx PL or DPL signal (if you have a PL/DPL board installed then J6-24 should not be used for an external control input, use it only as an output, if at

all). When the J6-24 Audio Mute is pulled high (to + 5 volts) it overrides the internal squelch hybrid circuit and mutes the received audio. When J6-24 is pulled low (i.e. grounded with a 220 ohm resistor) it overrides the internal squelch hybrid circuit and un-mutes the received audio. If J6-24 is only pulled high when no PL is detected (i.e. force the audio to mute) and never pulled low low when the correct PL/DPL is detected (JU13 is removed on some models of PL/DPL boards), it works with the internal squelch hybrid circuit to adjust the receiver sensitivity through the squelch control potentiometer (this is used to make the radio less sensitive when unwanted weak signals with the correct PL or DPL are causing interference on your receive frequency). J6-24 should never be shorted directly to ground by any external control circuit as it might damage the squelch hybrid, PL/DPL Board or Interface Board transistor Q1.

The Detected Audio Disable control input (also know as Detector Mute) on J6-35 can be wired to P201 on the main board and used to mute the receiver audio detector (the Mobile Voice Storage option is the only thing I am aware of that uses this). When hooked up to P201, this control input mutes the U201 detector audio before it even gets to the squelch hybrid, so the squelch control has no function while the detected audio is muted.

Repeater Conversions:

As mentioned in the home page introduction you need two of these radios to make a repeater conversion. Either use J6-7 Channel Activity as the repeater controller Carrier Operated Relay conrol or make a custom voltage level converter switch (a single transistor and a few resistors) for the J6-24 Audio Mute output and use it as the Carrier Operated Relay control signal. The difference between them is the J6-7 Channel Activity will ignore any internal Syntor PL/DPL option board (i.e. it is controlled strictly by the control head squelch adjustment setting) and J6-24 Audio Mute will have any optional PL/DPL detect included (when an optional internal PL/DPL board is installed it can completely take over control of the J6-24 Audio Mute). If your repeater controller has a CTCSS or PL detect input, install and setup an optional Syntor internal PL/DPL Board and make the voltage level converted J6-24 Audio Mute the CTCSS/PL control signal. Then make J6-7 Channel Activity the Carrier Operated Relay control signal.

The received audio source comes from the J6-20 Detected Audio. For FM voice signals this audio will have already been pre-emphasized by the transmitter the voice signal originated from, so this detected audio will be pre-emphasized. If you feed this pre-emphasized audio to the J6-15 Microphone Hi input, it will get pre-emphasized again giving it double pre-emphasis and very noticeably distorting the audio frequency response. As an alternative you can make the J6-18 Flat Audio modification show here and use it instead of J6-15. You can also make your own custom external de-emphasis circuit (i.e. de-emphasize J6-20) or use the PL/DPL filter receiver section alternative modification

(next paragraph below) and still use J6-15 if you want. One advantage of the J6-18 modification is the microphone can still be connected to J6-15 and used for on site Tx operation and testing. Also using J6-20 Detected Audio for the repeater audio means you can still use the volume control and audio section / speaker for on site monitoring.

The J6-20 Detected Audio will pass any received PL or DPL signal on to the transmitter. In this case you will need to make a custom PL filter for the detected audio and install it. As an alternative you can use the Syntor internal audio signal after it is de-emphasized and filtered (i.e. RAS) to remove the PL/DPL, by making a custom modification to output this RAS audio to the J6 connector (you should also disable the last power output section of the audio amplifier and make the volume control internal to the radio as adjusting it will alter the audio level sent to the transmitter - the audio section will not be usable for on site monitoring).

As repeaters can have a 100 % duty cycle, it is recommended the Tx power level be tuned down to no more than 1/2 the rated power level and an external cooling fan should be installed over the PA heat sink if additional cooling is needed. The Tx output should be checked with a spectrum analyzer to make sure there are no spurious emissions when the power is reduced.

You have probably had the experience of being mobile in a noisy vehicle and having one station with such weak audio levels you have to turn up the volume control, only to get blasted by the next station with normal audio. Here is one solution to this problem. If you feed the Tx audio though the deviation limiter (J6-15 or the J6-18 modification) and you adjust the transmitter to hard limit the deviation at no more than 5 KHz, then you can slightly overdrive the Tx audio into the deviation limiter on purpose. There will be a slight amount of distortion when the deviation limiter kicks in, but this is only communications audio, not some high quality home entertainment system (when properly adjust any distortion will not be noticeable). The advantage of this is someone that speaks softly or holds their microphone too far away will have their under deviated signal boosted by the repeater transmitter and the transmitter will not be able to over deviate on the normal signals. BTW, this should never be done to a link repeater signal or if the repeater Tx output is used for signaling (DTMF, QC-II, MDC, etc.) as distortion will get noticeably amplified after passing through several more links and the gain boost can mess up signaling systems causing them to malfunction. Two drawbacks of this particular approach are the squelch tail noise burst from the repeater receiver will also be boosted and if you do not filter any Rx PL/DPL out of the detected audio it will also get boosted up to above normal deviation levels in the repeater Tx output.

When adjusting the Tx deviation for repeater voice signals, keep in mind that is is different than adjusting deviation for a microphone. The Rx output has a much wider output range than a microphone. You

must temporarily overdrive the Tx modulation input to correctly adjust the Tx deviation limiter (IDC). Failure to do this can allow an over deviated user's radio to over deviate your repeater and cause your repeater to violate FCC rules and regulations.

It appears the PL/DPL board could be modified for dual level squelch control. It would un-mute when the correct PL or DPL is detected, even for a weak signal. However, the squelch control could be adjusted such that a modified PL/DPL Board would allow the radio to un-mute without the correct PL or DPL, but only for strong signals. This is the opposite of the previously described normal method of eliminating weak unwanted signals in the Audio Muting Interface section above. This would allow strong stations to work the repeater without a PL or DPL, but require PL or DPL for weaker stations. This should eliminate weak signal interference on the repeater input without absolutely requiring the use of PL or DPL. The PL DPL board would have to be modified to only pull the J6-24 Audio Mute line down to ground through a 220 ohm resistor when a valid PL or DPL was received (i.e. un-mute the audio) and to never pull J6-24 Audio Mute up to + 5 volts (i.e. thereby allowing the squelch hybrid circuit to determine when the audio is muted). Then you would have to turn the squelch control up far enough to eliminate any interference. BTW, if your repeater controller has a COR input, a PL/DPL detect input, and is programmable to use both inputs together in a logical OR fashion to key the transmitter, then you can accomplish this weak signal PL/DPL and strong signal performance without making any modification to the PL/DPL Board.

There are aftermarket PL/DPL filters, pre-emphasis circuits, de-emphasis circuits and automatic audio gain control systems available for repeater applications if you do not want to make your own.

Here is a list of the modifications done to a Syntor to make a repeater transmit radio:

The cable wire for J1-19 (Squelch) was moved to J1-18 to provide a shielded audio input line for the Flat Audio modification. The plus side of a 63 volt 10 uf capacitor was soldered at J6-18 and its minus side to P2-4 (Spare) (insulators were slipped over its leads). On the bottom of the radio under the RF Board shield, a 1/8 watt 12 k resistor was soldered between P2-4 (Spare) to U502 pin 4 (the resistor and its wires had an insulating sleeve placed over them).
Pins at J6-2 and J6-20 were removed from the connector body, left inside the connector housing and taped over to prevent any shorts.
A new pin was placed at J6-2 and connected to ground. This should help prevent any unnecessary power drain from the unused receiver.
New pins were placed at pins J6-19 and J6-20 with a 3.3 K resistor connected between them to close the squelch gate circuits and activate the audio section mute. This should help prevent any unnecessary power drain from the unused receiver.
Here is a list of the modifications done to a Syntor to make a

repeater receive radio:

The single transistor voltage level converter input wire was connected at P1-8 (Audio Mute) on the solder side of the RF Board.
The transistor voltage level converter output (i.e. the transistor collector) wire was connected to P1-10 (Decimal Select Talk-Around at J6-12) on the solder side of the RF Board. J6-12 was not connected anywhere else besides P1-10 inside the radio, so it was just an available unused pin at J6-12 and the radio cable already had a wire at this pin location.
The manual was used to find a suitable ground on the solder side of the RF Board for the transistor voltage level converter emitter wire.
The voltage level converter NPN transistor and its two bias resistors were put on a perforated board, wires were soldered for the 3 above connections and the entire perf board was wrapped in electrical tape.
The bias resistors values were determined empirically (i.e. you might need different values as my setup may not be reproducible over a wide variety of Syntor radios). Both turned out to be 10 K with one in series with the transistor base and the other connected from the transistor base to ground (the emitter in this case). The repeater controller had its own internal pull up resistor so only the transistor collector was wired directly to the J6-12 output. The signal at J6-12 for this type of interface is either a high impedance when it is not active or a short to ground when it is active.
An unused wire in the cable connector was moved to J6-7 (Channel Activity). The actual wire used will depend on your cable.
The transmit and receive cables were wired to a double sided barrier strip and attached with the barrier strip screws (the Rx and Tx radio F1 frequency select lines were both grounded and the other F2 through F12 lines were not connected). The barrier strip positions were labeled:

Volume
Squelch
Detected Audio
Rx Audio Shield
Tx Audio Shield
Tx Flat Audio
Mic. Hi
Audio Mute (PL Detect - I used an internal Syntor PL Board)
Channel Activity (COR)
PL On/Off (HUB)
PTT
Speaker Hi
Speaker Low
Rx Chassis
Tx Chassis
Switched B+ (from clamshell control head)
The modified receive and transmit cables were cut to length and terminals for the barrier strip were crimped on and soldered (actually some old 4 frequency Micor cables were used, the gauge of the large

red and black power wires were matched to the Tx radio power level). Then a clamshell control head, the repeater controller cable, the receiver cable and transmit cable was wired up to the barrier strip (one of the cut off Micor cable ends was used for the clamshell control head). A fused power wire was provided to the clamshell control head, the PTT reference lines were wired to switched B+, a microphone and speaker were plugged into the clamshell. The PL On/Off (HUB) was wired to a programmable repeater controller logic level output for DTMF remote control. All unused cable wires were tie wrapped back onto their own cables, strain releifs were attached to the cables near the barrier strip and everything except the power supply, radios and repeater controller were mounted on a 19 inch rack panel. Both the Rx and Tx radio large red and black power wires were fused and connceted to the power supply (the Rx audio amplifier will not function without power from these wires). Another wire was fused and attached to the clamshell control head 22 pin black connector at pins 12 and 13 . All the power fuses were the same ones used in a normal Syntor installation (our repeater 70 amp power supply and battery backup are more than capable of blowing the 40 amp fuses). Another fused power wire was connected to the repeater controller. It all makes a very clean easy to work on installation.

Frequency Agility:

The http://www.batlabs.com/ web site (see the Syntor model specific information) has links to information on converting these radios to be frequency agile via thumb wheel frequency controls (look for Syntor VHF/UHF modification instructions). The VHF conversion can cover the entire 144 to 148 MHz HAM band in 5 KHz steps. There are other links to frequency agile conversion kits on Batlabs.

EPROM Conversion:

The Syntor radios come with a U1100 16 channel (82S129) or 32 channel (82S131) one time only programmable PROM which is used to control the radio's synthesizer (i.e. the receive and transmit frequencies). Jumper JU1101 will be installed in 16 channel radios and removed in 32 channel radios (a 32 channel control head and cable with 12 frequency select wires is required for proper operation). Since the PROM can not be reprogrammed once a channel has already been programmed, it must be replaced with a brand new PROM which can be programmed. New PROMs are getting very hard to find and the easier to find substitute PROMs that will plug into the Syntor PROM socket, program differently than the original PROMs (i.e. the PROM programmer must be able to handle the substitute PROMs).

One solution is to make a converter that will allow the use of a reprogrammable EPROM. This device allows you to use standard 2716 or 27C16 EPROMs to program the transmit and receive frequencies. There is enough room on the EPROM for 128 channels, but the Syntor can only make use of up to 32 channels. By changing the wiring shown in the construction project details below, you should also be able to use

2816 EEPROMs (it was reported to me that a 2816 worked, but Q1101 had to be jumpered - see below).

The power to the U1100 chip has its power switched by transistor Q1101. The power to the U1100 socket is only turned on when the synthesizer wants to read the frequency information. Some substitute EEPROMs do not recover quickly enough after the power is turned on to read correctly (the original PROM has a very fast recovery). If this happens (i.e. your substitute EEPROM chip does not work), try shorting out the emitter and collector on transistor Q1101 to supply uninterrupted +5 volt power to U1100. This is never a problem with the original PROM. Remember to use the correct wiring if you choose a chip other than a 2716 for this construction project.

Remember to take anti-static precautions and always pay very careful attention to the pin 1 orientation on the chip and socket. Be careful when pulling a chip from its socket. PC board traces can be accidentally damaged if you are not very careful about where you place any tools used to pry a chip out. A real chip removal tool should be the safest thing to use.

Click here for a construction project details.

Click here to see a similar construction project done by Ries Labs.

Brinkley Electronics has manufactured PROM converters and is selling them (link). I have not tried one yet, but they look nice. BTW, they also have a MCX-100 converter (link).

35 Detected Audio Disable* (Input)

The Interconnect Board inside the radio that has the main J6 connector on it, has other undocumented connections on the spare pins that are not covered in the -O and revision manuals.
J6-12 Decimal Select Talk-Around goes to an unused pin (i.e. not connected) on the main receiver board at J1-10.
J6-18 and J6-26 are not connected to anything on the Interconnect Board. The cable wire at J6-26 is an unused spare line that can be moved to a different J6 pin if needed.
J6-27 PL/DPL audio can also be used for a flat Tx modulation connection if there is no PL/DPL board installed in the radio and the Interconnect Board JU13 is installed.
* - These signals are not available on radios with an early version of the Interconnect Board.

There are several different varieties of Syntor cables. The most common differences are the number of frequency select wires (F1 - F12).

The System 90 Micor cables can be interchanged with Syntor cables (some wires may need moving and some Micor cables may not have enough

frequency control wires). Also be sure to match the Micor main red and black power wire gauges (i.e. the thickness of the wire) with the current requirements of the Syntor radio.

SYNTOR RADIO CABLES

SYNTOR RADIO & CONTROL HEAD POWER CABLES

PART NUMBER
DESCRIPTION
HKN4051A 30" #8 gauge Red Power Cable and Fuse kit (40 amp)
HKN4052A Control Head Power Wires and Fuses

SYNTOR DVP CONTROL HEAD CABLE KITS
PART NUMBER
DESCRIPTION
HKN4078A Light Green 22 pin connector cable kit
HKN4079A Light Purple 22 pin connector cable kit, Positive ground
HKN4080A Light Purple 22 pin connector cable kit, Negative ground

The above cable kits are for the back of the DVP control head. They include wires to connect to the mode control head.
The above DVP Control Head Cable numbers may be found on a Syntor Radio Cable and mistakenly reported as the part number for the entire Radio Cable. These numbers will only really tell you the cable is a DVP cable. There is no information from these part numbers about the number of frequencies, length, negative / positive ground, or weather resistance.

SYNTOR OPTIONAL CABLE KITS

PART NUMBER
DESCRIPTION
HKN4044A Public Address, Orange 22 pin Connector
HKN4069A MDC-600, Green 22 pin Connector

HKN4145A MVS-20, Dark Blue 22 pin Connector
TKN6503A QC II and Touch-Tone Decoder, Green 22 pin Connector
TKN6506A Single Tone Encoder, White 22 pin Connector
TKN6520A Voice Privacy Adapter, Red 22 pin Connector
TKN6731A Touch-Tone Encoder, Dark Blue 22 pin Connector
TKN6754A Siren/PA, Pink 22 pin Connector

These optional cable kit part numbers may be found on radio cable connectors and can be confused with the real cable part number which might even be missing.

Additional Information:

When the Syntor uses a binary code to select the frequency (as is done with the 16 position rotary clamshell control heads), the first channel is coded as a value of 1. For comparison, the Syntor X first mode is coded as a value of 0. Both of these control heads also ground other select lines to tell the radio it is a binary code, but they use different lines to do so (see below).

A Syntor Clamshell control head with the 16 position rotary switch is different from a Syntor X Clamshell control head with the 16 position rotary switch. The white disc with the numbers 1 through 16 is keyed differently and the Syntor X also does not ground the F11 and F12 frequency select lines. Here are the Motorola part numbers for the disc:

36-80148B01 - Syntor $ 7.50
36-80148B02 - Syntor X $ 7.95

The Syntor disc is keyed differently from the Syntor X disc, so the channel selected by the Syntor X 16 position switch does not match the number it displays on a Syntor radio. To fix this problem all you have to do is get the Syntor 36-80148B01 disc, take the Syntor X clamshell apart, swap the new disc for the old one and put it back together. If you are really good at working with plastics I suppose you could reshape the D shaped hole in the center of the Syntor X disc to duplicate the Syntor orientation instead of getting a replacement disc.

In addition, the Syntor X control head will ground frequency select lines F6, F7 and F8. If there is no A/B or R/D switch then frequency select line F5 will also be grounded. These grounds should be removed from inside the control head. If there is an A/B or R/D switch it will be wired backwards (i.e. B/A or D/R). Lastly, frequency select lines F11 and F12 need to be grounded. The Syntor X isolation diodes will not cause any problem for the Syntor.

Because the Syntor has no internal microprocessor control, scanning must be performed directly by the optional scan control head. On the Syntor X, the scan control head only provides information to the radio's internal microprocessor and does not actually perform the scanning. The Syntor and Syntor X scan control heads are not

compatible.

Please check out http://www.batlabs.com/ and its Syntor links for more Syntor information.

Control head configuration:

This page has information about clamshell, System 90, System 90*s and HHCH control heads, accessories and internal options. Please be sure to check the clamshell control head or System 90*s control head basic configuration information as incorrectly configured control heads are a frequent problem. To determine if you need to use Mode Strobe check the board number of any System 90*s boards hooked up to the radio cable. Look up the boards on this page and if you find one listed with a ** then you need to use Mode Strobe.

Clamshell mode select control heads:

HCN1009A* - Control Head, 8 Mode
HCN1019A - Control Head, 16 Mode, photo
HCN1020A - Control Head, 32 Mode, photo
HCN1022A - Control Head, 16 Mode with Talk-Around, photo
HCN1023A - Control Head, 8 Mode with Talk-Around
* - this 8 mode clamshell is also a Syntor part and is lacking some internal diodes the other Syntor X clamshell control heads use. It works just fine when it is used by itself and the radio is setup properly.

Here is how to check the basic configuration of your clamshell control head.
When the clamshell control head is used all by itself, the mode select rotary switch common terminal is internally wired to the 22 pin black connector pin 21 (ground). This is also true when the clamshell is combined with accessories that do not use the radio's mode lines (i.e. there are no other boards connected to the cable that supply the Mode Strobe signal).
When the clamshell control head is used with System 90*s accessories that use the radio's mode lines, the mode select rotary switch common terminal is internally wired to the 22 pin black connector pin 5 (Mode Strobe).
For normal non-DVP operation, audio is supplied through the 22 pin black connector pin 16 (Detected Audio), the 22 pin blue connector pin 16 (DVP Audio) is not connected and resistor R1103 (3.3 K ohm) is present.
DVP compatible control heads remove resistor R1103 (3.3 K ohm) and supplies the receiver audio through the 22 pin blue connector pin 16 (DVP Audio).
See the radio service manual for details.
The HCN1022A 16 mode with Talkaround clamshell control head and the HCN1020A 32 mode clamshell control head are both 32 mode control heads. The only difference is the HCN1022A has a bank select switch

marked "R - D" and the HCN1020A has a bank select switch marked "A - B".
The HCN1023A 8 mode with Talkaround clamshell control head and the HCN1019A 16 mode clamshell control head are both 16 mode control heads. The only difference is the HCN1023A has a bank select switch marked "R - D" and the HCN1019A has a bank select switch marked "A - B".

System 90*s housings:

There are several slightly different housings for System 90*s boards. The difference is the rear panel connector configuration. Most of the time the System 90 or System 90*s part number found on a small white label on the printed circuit board is the only identification (not to be confused the housing part number, see below). The DVP housing is a special housing designed to accommodate a round keyloader connector on the front of the housing.

There is a standard configuration used for the board that controls the power on/off, volume, squelch and selects the mode banks. The microphone and speaker are also connected to this board. There is a 22 pin connector on the left side and a 6 pin, 2 pin, and 6 pin connectors on the right side (as viewed from the rear of the housing). I will refer to this as the "STD" configuration.

There is a configuration with two 22 pin connectors, one on the right and the other on the left. I will refer to this as the "OPT" configuration.

Each housing has positions for two boards, one on top and the other on the bottom. Each one of these boards has its own connector configuration.

HHN4008A - Black System 90*s Housing, back photo (top position - OPT, bottom position - STD)
HHN4009A - Black System 90*s Housing, back photo (top position - OPT, bottom position - OPT)
HHN4010A - Black System 90*s Housing, back photo (top position - STD, bottom position - STD)

HHN4011A - Black System 90*s Housing for Securenet (DVP)

Often one of the above four part numbers is the only one found on the outside of a System 90*s housing and therefore is incorrectly mistaken as the part number for the entire assembly including the boards inside the housing.

HLN4235A - Public Address or Siren System 90*s housing back plate.

System 90*s mode select control heads:

Below is a combination of complete control heads and the printed circuit boards that go into the complete control head. To help sort things out the part numbers for the circuit boards are underlined. The

"used with" notes in parenthesis are information I added. The circuit board numbers are the ones mostly encountered in the field. Kit numbers are usually only found on factory shipping containers and and are used when ordering new parts from Motorola. Most of the time the circuit board part number is found on a small white label on the printed circuit board is the only identification (sometimes the part number is printed directly on the board). The information in the curly braces is the manual code. Use it to find the manual that covers the board.

Motorola considers the clamshell (rotary) control heads to be the "standard" Syntor X control heads. The following list is System 90*s "alternate" (pushbutton) control mode selection modules:

HLN1062A - 8 Mode Pushbutton Select Module
HLN1061A - 8 Mode Pushbutton Select Module with Scan for 8 Mode Control Head
HLN1075A - 8 Mode Pushbutton Select Module with Scan for 16 or 32 Mode Control Head
HLN1063A - Alternate Control Module, 8 Mode, photo
HLN1065A - Alternate Control Module, 16 Mode, photo
HLN1066A - Alternate Control Module, 32 Mode, photo

A complete pushbutton control unit also requires the following components: first select one of the three 8 Mode Pushbutton Select Modules, second select one of the three alternate control modules, then add the HHN4008A (housing) and HLN4208A (single housing trunnion).
The above part numbers were used for ordering and if you find any new in the box System 90*s control heads you may run into these part numbers. I have no information on which circuit boards were provided with these order numbers (see below).
TRN4395A - Bank Select or 1 Mode Select, Volume, Squelch board {S9s-1}
TCN1352A - Bank Select or 1 Mode Select, Volume, Squelch Kit w/ TRN4395A , Hardware & Escutcheon, photo
TRN4340A - A, B Bank Select or 2 Mode Select, Volume, Squelch board {S9s-1}
TCN1351A - A, B Bank Select or 2 Mode Select, Volume, Squelch Kit w/ TRN4390A , Hardware & Escutcheon, photo
TCN1350A - R, D Talkaround Bank Select, Volume, Squelch Kit w/ TRN4340A , Hardware & Escutcheon
HLN4296A - A, B Bank Select, Volume, Squelch board (use with TRN4344 or HLN4336) {S9s-1}

HLN4296 or HLN4298) {S9s-2} **
TLN1075A - 16/32 Mode Select with Scan and Display Kit w/ HLN4336A ,
Hardware & Escutcheon, photo

Here is how to check the basic configuration of your System 90*s
control head bank select board.
When a bank select board is used without a mode select board (1 and 2
mode control heads) and there are no other System 90*s accessories
that supply the Mode Strobe signal, the 6 pin blue connector pin 4
(Mode Strobe In) is connected to ground.
If any boards are present that supply the Mode Strobe signal then the
6 pin blue connector pin 4 (Mode Strobe In) is connected to Mode
Strobe (if it is used at all).
For normal non-DVP operation, audio is supplied through the 22 pin
black connector pin 16 (Detected Audio), the 6 pin blue connector pin
5 (DVP Audio) is not connected and resistor R4 (3.3 K ohm) is present.
DVP compatible bank select boards remove resistor R4 (3.3 K ohm),
supplies the receiver audio through the 6 pin blue connector pin 5
(DVP Audio) and jumper JU8 is installed.
See the S9s-1 manual for details.
** - These boards supply the Mode Strobe signal.
Normally, a Bank Select board is combined with Mode Select board and
placed in a HHN4008A housing. Combined they make up the Mode Select
control head. Bank select boards can be used without a mode select
board. This is done for 1 and 2 mode control heads that do not have
scan or indicators.
The HLN4336A 16/32 Mode Select with Scan and Display actually has 8
Mode Pushbuttons. All of the other Mode Select boards with Scan and
Indicators are only designed to show one specific bank (A/B/C/D) of 8
modes (jumper selected). The 16/32 Mode Select board shows any scan
activity in banks A, B, C or D (i.e. if the mode 5 light lights up
while scanning, it could mean mode 5 bank A, bank B, bank C or bank D
is actually active). This difference appears to be the reason this
board is the only one listed with a Display, instead of Indicators.

The TRN4338A can mimic this multiple bank scan display when jumper JU11 (orange wire) is moved to the JU7 position A, but it lacks protection from the false mode 32 display problem.
"Display" or "Indicators" means the radio directly controls the boards Mode and/or PRI lights. Otherwise these lights are directly wired to the board's switches and are not accessible to the radio. So just because "indicators" or "display" is not mentioned does not mean the board has no display lights, it means it has no display lights the radio directly controls. The method used by the radio to control the lights is unique to Syntor X radios and therefore so are the boards with "indicators" or "display".
Unlike earlier Motorola radio lines the Syntor X radio has an internal microprocessor that does the scanning. Older radio lines needed external hardware to make the radio scan. Avoid the scan control heads from older radio lines (i.e. Syntor, Mitrek, Micor, etc.).
For mode select boards with "Scan", all "Scan" really means is the board has a switch (labeled PRI) to ground J1-31 Channel Scan Enable to activate the radios built in scanning.
False mode 32 display: for 32 mode selection control heads with scan, the HLN4336A and HLN4298A boards should be used together. The radio sends a false mode 32 display to blank the display (used by 16 mode or fewer control heads) and these two boards have additional hardware to filter out this false mode 32 display. There are extra connections that must me made between the control head and radio for these boards (PTT and Squelch Tail). Other boards (i.e. TRN4338A) can be made to display all 32 modes, but the mode 8 light will light up when it should not because of the false mode 32 display. The 2 bank select (A/B) HLN4296A also has the hardware for the PTT output connection and it can be used if you convert it to a 4 bank select HLN4298A. None of the other bank select boards have the PTT connection to handle the false mode 32 display. If you convert a HLN4296A into a HLN4298A you will find Motorola no longer sells the A, B, C and D escutcheon, but the old Micor F1, F2, F3 and F4 escutcheons can be salvaged and they work just fine.

System 90*s operator select non-priority scan modules:

HLN1059A - Alternate Control Module Operator Select Channel Scan, 8 Non-Priority Modes
TRN4326A - 5 Mode Operator Select Scan with Display board (use with non-scanning TRN4343 or Clamshell) {S9s-2} **
TLN2256A - 5 Mode Operator Select Scan with Display Kit w/ TRN4326A , Hardware & Escutcheon
HLN4290A - 8 Mode Operator Select Scan with Display board (use with non-scanning TRN4344 or Clamshell) {S9s-2} **
TLN1059A - 8 Mode Operator Select Scan with Display Kit w/ HLN4290A , Hardware & Escutcheon, photo
TRN4328A - 2 Mode Scan Indicators board {S9s-2} **
TRN4332A - 5 Mode Scan Indicators board {S9s-2} **
TLN2259A - 5 Mode Scan Indicators Kit w/ TRN4332A , Hardware & Escutcheon

TRN4336A - 8 Mode Scan Indicators board {S9s-2} **
TLN2261A - 8 Mode Scan Indicators Kit w/ TRN4336A , Hardware & Escutcheon

** - These boards supply the Mode Strobe signal.
All of these boards only work with the Syntor X radio line because of their unique interface.
For non-priority operator select scan select boards, all "Scan" really means is the board has a switch (labeled PRI) to ground J1-31 (Channel Scan Enable) to activate the radios scanning.
Up to 4 of the HLN4290A boards can be used to select and display 32 non-priority scan modes (8 modes per board). The radio can be programmed to use these boards or its internal non-priority scan list, but it can not use both together. Many radios with 16 or 32 mode control heads only have a single HLN4290A board so programming the radio to use the board will limit them to 8 operator selectable non-priority scan modes. If the radio's internal non-priority scan list is programmed all 32 modes can be used, but then the HLN4290A board can not be used to select any modes. Each mode in the radio can be individually programmed to use the internal non-priority scan list or to use the HLN4290A board, however, it can never use both at the same time.
The TRN4336A and TRN4290A are both victims of the false mode 32 display. If the boards are jumpered for modes 25-32 (bank D) the mode 8 light will light up when a scan is started. The lights will display correctly when the scan stops on an active mode. There is no cure for these boards.
The 8 mode boards are used to make 5 mode or 2 mode boards by not fully populating the board with parts.

System 90*s operator select multiple PL/DPL modules (MPL):

TRN4322A - 4 Code MPL Operator Select board {S9s-3} **
TLN2254A - 4 Code MPL Operator Select Kit w/ TRN4322A & Hardware, Conventional 800 MHz only
HLN1057A - 4 Code MPL Operator Select Kit w/ TRN4322A , Hardware & Escutcheon
TRN4324A - 8 Code MPL Operator Select board {S9s-3} **
TLN2255A - 8 Code MPL Operator Select Kit w/ TRN4324A & Hardware, Conventional 800 MHz only
HLN1058A - 8 Code MPL Operator Select Kit w/ TRN4324A , Hardware & Escutcheon, photo

** - These boards supply the Mode Strobe signal.
All of these boards only work with the Syntor X radio line because of their unique interface.
The radio must be programmed to use these MPL boards.
The 8 mode boards are used to make 4 mode boards by not fully populating the board with parts.

System 90*s and System 90 optional equipment:

HLN1019A - Singletone Encoder, 1 Tone
TLN4525A - Singletone Encoder, 1 Tone Circuit Board
HLN1020A - Singletone Encoder, 5 Tone
TLN4526A - Singletone Encoder, 5 Tone Circuit Board
HLN1021A - Auxiliary Switch Panel
HLN1022A - Voice Privacy Adapter (VPA), simple frequency inversion
TLN4571A - VPA circuit board
TKN6520A - VPA hookup cable (control head to VPA)
HLN1023A - "Touch-Code" Mobile Encoder
TLN5837A - "Touch-Code" Mobile Encoder circuit board (6, 7, 8, 9, 0, #
keys)
TTN6006A - "Touch-Code" Mobile Encoder supplemental switching circuit
board (1, 2, 3, 4, 5, * keys)
TKN6731A - "Touch-Code" Mobile Encoder interconnecting cable
HLN1024A - "Touch-Code" Mobile Selective Signaling Decoder Kit w/
TRN6015A, photo
TRN6015A - "Touch-Code" Mobile Selective Signaling Decoder circuit
board, photo
HLN1018A - Public Address circuit board (uses radio's audio amplifier)
HLN1025A - Siren, wail-yelp-steady pitch
TRN4223A - Siren, control board, wail-yelp-steady pitch
HLN1026A - Siren, wail-yelp-Hi-Lo
TRN4222A - Siren, control board, wail-yelp-Hi-Lo
TRN1691B - Siren/Public Address audio power amplifier
TKN6754A - Siren Cable kit
HLN1017A - Quick Call II 2 Reed Decoder & 4 Reed Group Call Decoder
TLN4523A - Quick Call II 2 Reed Decoder Circuit Board
TLN4522A - Quick Call II 4 Reed Decoder Circuit Board
HLN4270A - Internal Retrofit Board: EMS, Single Tone Encoder, MDC-600
and 110/10 watt VHF T83 radios.
HLN1079A - EMS Rear Control Group with Headset
HLN1080A - EMS Rear Control Group with Handset
TRN4221A - EMS Rear Control Board
HLN1042A - EMS Transfer Module
HLN4312A - EMS Transfer Board
HLN1146A - Internal Retrofit Board, Mobile Voice Storage MVS-20
(includes MDC-600 retrofit)
HLN1117A - MVS-20 (Mobile Voice Storage - MVS)
HLN1146A - MVS-20 (Mobile Voice Storage - MVS) Syntor X Retrofit
HLN4535A - MVS-20 Circuit Board
HLN1068A - MDC-600 Unit Identification
HLN4302B - MDC-600 PTT ID Circuit Board
HLN1077A - MDC-600 Selective Call Decoder, photo
HLN4347A - MDC-600 Selective Call Decoder Circuit Board, photo
HLN1069A - MDC-600 Selective Call Encoder/Decoder
HLN4303B - MDC-600 Selective Call Encoder/Decoder Circuit Board
HLN1070A - MDC-600 Five Status with Alarms
HLN4304B - MDC-600 Five Status Circuit Board
HLN1071A - MDC-600 Five Status/One Message
HLN4305B - MDC-600 Status/Message Circuit Board
HLN4343A - MDC-600 Emergency Footswitch

HLN4349A - MDC-600 Emergency Pushbutton
TRN4394A - Adaptor Cable (800 MHz Radio Only)
TRN4353A - Interface Board, used with TRN4394A (800 MHz Radio Only)
HLN4423B - Securenet DVP One Code Board
HLN4424B - Securenet DVP Two Code Board
HLN5244A - Securenet DVP Bypass Board

The DVP Bypass Board allows a "VXJ" radio that is jumpered for and cabled for DVP to be used for normal voice communication without having to re-jumper the radio's Personality Board or re-wire the cable. This board is used in place of the DVP board and it has no front panel switches.

HHCH control head and accessoriess:

HCN4026 - Handheld Control Head, Securenet
HCN4027 - Handheld Control Head, Securenet, Non-Priority Scan Control
HCN4028 - Handheld Control Head, Non-Priority Scan Control
HCN4029 - Handheld Control Head
HKN4190 - Internal Controller Board Cable
HKN4216 - Radio to HHCH (Non-SecureNet)
HLN1170 - SecureNet Junction Box
HKN4187 - Radio to Junction Box Cable (SecureNet)
HKN4188 - Junction Box to Physical Security Housing Cable (SecureNet)
HKN4215 - Junction Box to HHCH Cable (SecureNet)
HHN4014 - Physical Security Housing (SecureNet)
HLN4849 - Junction Box Board
HKN4190 - Cable Controller Board
HHN4015 - Securenet Physical Security Housing, Single Card
YHN4006 - Securenet Physical Security Housing, Dual Card
YCN4014 - Handheld Control Head, Securenet, Zone/Channel
YCN4015 - Handheld Control Head, Securenet, Group/Channel
YCN4017 - Handheld Control Head, Securenet, Dual Code, Group/Channel
YLN4194 - Siren/PA Control Box
YLN1046 - System Interface Unit w/Siren/PA Interface
YLN1056 - System Interface Unit
YLN1056ASP02 - System Interface Unit, Dual Code
YLN4187 - Control Head Interface Board
YLN4188 - Siren/PA Interface Board
YHN4001 - System Interface Unit housing w/ Siren/PA
YHN4005 - System Interface Unit housing
YKN4112 - Radio Control Cable
YKN4113 - Control Head Control Cable
YKN4114 - Siren/PA Cable
YKN4116 - Securenet Control Cable
YKN4116BSP01 - Securenet Control Cable, Dual Code
YKN4129 - Securenet Control Cable
YKN4188 - Siren/PA Cable
HLN1099 - Securenet Control Board
YLN4405 - Securenet Dual Code Control Board
TLN4404 - Securenet Dual Code Board

TLN1691BSP02 - Siren/PA Power Amplifier
YLN4209 - Transmitter Modification
TRN4838 - Securenet DES Encryption Hybrid
HSN1001 - Speaker, special connector for HHCH cable - Renumbered to HSN4018A
YSN1003 - Speaker, special connector for HHCH cable - Renumbered to HSN4018A
HLN4830 - Hang-up Box

The hand held control head also requires the HLN4728A - Hand Held Control Head Interface Board to be installed in the Syntor X radio. The HCN4026 and HCN4029 control heads can be field programmed with the non-priority scan list. However, the procedure involves removing the bottom cover of the radio. The other two HCN4027 and HCN4028 control heads easily program the non-priority scan list directly from the control head.

PAC-RT and PAC-PL Vehicle Repeater:

Please see the PAC page for information on the PAC-PL and PAC-RT.

Syntor X accessories:

HMN1015A - Microphone, Weather Resistant
HMN4000B - Microphone, Weather Resistant
TMN6116A - Microphone, noise canceling
HMN4002A - Microphone
HMN1022B - DTMF Microphone, Non-Trunked
HMN1014B - DTMF Microphone, Trunked
HLN4188A - Microphone Hangup Box
TMN6057A - Handset, simplex
TMN6067A - Handset, duplex
TMN6152A - Handset, trunking
TMN6090A - Headset w/pre-amp and lip mic
TLN5557A - Headset footswitch
HSN4005A - Speaker, 15 watts, 8' cable
HSN4006A - Speaker, 15 watts, 25' cable
HSN4011A - Speaker, 20 watts, 12' cable, weather resistant
TSN6016B - Speaker, 10 watts, 10' cable, X3 trunked radio only
07-84567B01 - Speaker hangar bracket
14-84566B01 - Speaker Connector Housing (use 09-84151B03 pins - same as cable and control head pins)
TAB1002C - Low Band Antenna with Spring Base
01-80016K02 - Radio Mounting Tray

Many accessories from older Motorola radio lines will also work with the Syntor X.
The only difference between the HMN1022B and HMN1014B DTMF microphone is the jumpering. Motorola manual 68P81114E07-B has the jumpering information. An unmodified trunking microphone is still usable on a conventional radio, but the touch tones will be pre-timed bursts no matter how long you hold down the button.

The Speaker hangar bracket also requires a 6-32 x 3/8" machine screw.

Internal options for the Syntor X:

HLN4728A - Hand Held Control Head Interface Board
TRN8868A - 800 MHz Rx pre-amp
HLN1087A - Fusible Link PROM Module (early Syntor X radios), White Label
HLN1088A - Fusible Link PROM Module (early Syntor X radios), White Label
HLN1089A - Fusible Link PROM Module (early Syntor X radios), White Label
HLN1125A - Re-programmable (2816A) EEPROM Module, Orange Label

Special Syntor X parts:

In general, Motorola part numbers that start with a "Y" are special order variations of standard parts (i.e. YCN1009A would be a factory customized variation of the HCN1009A). These parts can be quite useful, but you will have to figure them out on your own unless you are fortunate enough to get the documentation with them.

Control head diodes:

Missing diodes: an important difference between the Syntor and Syntor X clamshell control heads is the Syntor X clamshell control heads have diodes added to the mode selector outputs. When the control head is used with any System 90*s accessories that connect to the mode lines (see example cable wiring pin out for a clamshell control head), the diodes allow the clamshell control head to be electronically removed from circuit. If the diodes are not present (i.e. as with Syntor clamshell control heads) the control head will mess things up when the radio attempts to communicate with System 90*s accessories that use the mode lines. You can only use Syntor clamshell control heads on a Syntor X when there are no other System 90*s options that use the J1 cable mode lines connected to the radio. The EEPROM should also be programmed to not do anything that causes the radio to try and communicate with any System 90*s non-priority scan and MPL options, the "display enable" line on the cable should be disconnected and finally JU14 the display enable jumper should be removed (JU14 is only on the HLN4760A, B and C Personality Boards, but remember to check the other Personality Boards for custom jumpers on the trace side of the Personality printed circuit board).

The HCN1009A clamshell control head is a hold-over from the original Syntor radio line that lacks the diodes, so it should follow the above rules for Syntor control heads. When an 8 mode control heads is mixed with System 90*s accessories that use the mode lines, the 8 mode System 90*s alternate control module should be used instead of this clamshell. The other option is to modify the 8 mode clamshell control head and add the diodes yourself. It will still need to be correctly connected to the cable (see example cable wiring pin out for a

clamshell control head).

The System 90*s alternate control modules (i.e. pushbutton mode control heads) also have different methods of releasing the M1-M8 mode lines as well as using "mode strobe" and diodes. They use logic chips that use the "control head strobe" signal and decode the M9-M12 address from the radio instead of diodes. Again, like the Syntor clamshell without diodes, if you set up the EEPROM, jumpering, display enable and do not use any System 90*s options that connect to the mode lines, you can use older Syntor pushbutton mode select control heads parts. If you break these rules a Syntor X radio may display strange behavior because the mode selector will interfere with the radio when it attempts to use the mode lines to communicate with other System 90*s options.

I have the following items for sale. Prices do not include shipping. I will ship overseas.

Eico Model 950A Capacitance/Resistance Checker.....$35 plus shipping
This unit works well and is in beautiful cosmetic condition considering it's age. Includes a photocopy of the manual.
http://members.cox.net/radiostuff9/eico950a.jpg

Hewlett Packard HP3400A RMS Voltmeter.....$40 plus shipping
This is a tested and is a working unit. It does not include a power cord. It does include a copy of the manual on CD
http://members.cox.net/radiostuff9/hp3400a.jpg
http://members.cox.net/radiostuff9/hp3400a2.jpg
http://members.cox.net/radiostuff9/hp3400a3.jpg

Hewlett Packard HP400E AC Voltmeter.....$30 plus shipping

This is a tested and is a working unit. It does not include a power cord. It does include a copy of the manual on CD.
http://members.cox.net/radiostuff9/hp400e.jpg
http://members.cox.net/radiostuff9/hp400e2.jpg
http://members.cox.net/radiostuff9/hp400e3.jpg

Realistic DX-160 Communications Receiver & Matching Speaker......$125 plus shipping
This is a 5 band solid state receiver that covers 150 kHz to 30 MHz. It has a BFO for CW and SSB reception and bandspread for the ham bands. This radio will run on 110 volts AC or you can run it from a 12 volt battery. Other than a few very minor scuffs, this receiver is in really nice shape and works well on all bands. I even heard some signals down in the VLF band. Includes a photocopy of the manual.
http://members.cox.net/radiostuff9/dx160.jpg
http://members.cox.net/radiostuff9/dx1603.jpg
http://members.cox.net/radiostuff9/dx1602.jpg
http://members.cox.net/radiostuff9/dx1604.jpg
http://members.cox.net/radiostuff9/dx1606.jpg

National Type MCN Dial.....$25 plus shipping
Used but good condition with a clean dial face
http://members.cox.net/radiostuff9/natdial.jpg
http://members.cox.net/radiostuff9/natdial2.jpg

Heathkit SB-604 External Speaker.....$30 plus shipping
This is the matching speaker for the SB-104. The speaker sounds great

and is in nice shape with a few minor scuffs.
http://members.cox.net/radiostuff9/heath_sb604.jpg
http://members.cox.net/radiostuff9/heath_sb6042.jpg

Cold War Relic - Civil Defense - Radiological Survey Meter......$75 plus shipping
These are NOS meters painted in Cvil Defense yellow with a neat Civil Defense logo left over from the cold war. These were to be used for checking for radiation after a nuclear attack. Includes manual, an original but now dead vintage battery (note the 20 cent price), remote cable (not shown but stored in the unit), and carrying case. A neat collectible for your 1950ï¿½s or 1960ï¿½s station to set by your CONELRAD alarm
http://members.cox.net/radiostuff9/cd_meter.jpg
http://members.cox.net/radiostuff9/cd_meter2.jpg
http://members.cox.net/radiostuff9/cd_meter3.jpg
http://members.cox.net/radiostuff9/cd_meter4.jpg
http://members.cox.net/radiostuff9/cd_meter5.jpg
http://members.cox.net/radiostuff9/cd_meter6.jpg
http://members.cox.net/radiostuff9/cd_meter7.jpg

Schaub Lorenz "T30L Weekend" German Portable Radio.....$45 plus shipping
This is a Portable Radio made in Germany. As near as I can determine this radio is from the late 1950's or early 1960's. This is a 3 band transistor radio that covers long wave, medium wave (standard broadcast band) and FM. The radio is in beautiful shape cosmetically but it is not working. I can hear weak audio from the speaker but no stations. Their is no battery acid damage. The two antennas are in good shape. The insides are clean.
http://members.cox.net/radiostuff9/schaubl.jpg
http://members.cox.net/radiostuff9/schaubl3.jpg
http://members.cox.net/radiostuff9/schaubl5.jpg
http://members.cox.net/radiostuff9/schaubl6.jpg

Jackson Model 103 Tube Tester.....$30 plus shipping
Older tube tester in working condition.
http://members.cox.net/radiostuff9/jacksontubetester.jpg
http://members.cox.net/radiostuff9/jacksontubetester2.jpg

Triplett 800 VOM with Manual.....$40 plus Shipping
Very clean working VOM with original manual
http://members.cox.net/radiostuff9/triplett_800.jpg
http://members.cox.net/radiostuff9/triplett_8002.jpg
http://members.cox.net/radiostuff9/triplett_8002.jpg

Thanks for looking.

---

Motorola TWO-WAY RADIOS FOR SALE

---

New Items (July 18, 2004)

Motorola NTN1174A Battery Charger (no transformer), $25.00 EA
($35.00 for 2, $45.00 for 3)

New Items (July 18, 2004)

Motorola Charger for Jedi Radios (HT1000, MT2000, MTS2000): $30.00.

Motorola Charger for GP300 or P1225: $30.00.

New Items (July 05, 2004)

DVP Secure Hybird Module TRN6777B for Spectra, Syntor, KVL: $135.00

DES Hybrid TRN4836A for Spectra, Syntor, KVL: $125.00

Motorola Spectra Desk Mike: $35.00

Motorola GP300/GP68 Speaker Mike: $35.00

Motorola Convertacom for P200, HT600 (Genesis Series HTs): $45.00

---

Motorola Astro Spectra Mobile
* Model: T99DX+148W_ASTRO.
* ID: T04QKH9PW9AN.
* Serial: 494AYY----.
* FCC ID: AZ492FT4786.
* MFG Code: 1000080000000.

* Firmware: R095100.

* Flashcode: 100008-000000-0.
Options Installed on this Flashcode:
Q806/G806 IMBE / APCO-25 Digital Operation.
H38/G51 Smartzone Operation.

Includes:
- Radio unit
- W9 Control Head
- control head to radio link cable
- Mike
- Speaker

Model/features:
Type of Mount: Trunk Mount.
Frequency Band: UHF low (Government Split).
Physical Package: Full Keypad, with Display.
Channel Spacing: Programmable.
Primary Operation: Programmable.
Primary System Type: Programmable.
Feature Level: Full Featured/Programmable.

This is a trunk mount radio with a W9 full keypad with display control head. The radio is Securenet capable and is APCO25 digital capable as well as conventional operation.

Paypal or checks accepted. Pictures can be emailed.

$585.00 plus shipping.

---

Motorola UHF Saber I
- 12 Channels
- Frequency range: 439.000 MHz - 471.000 MHz.
- Model: H99SA + 057H.
- Factory ID: H44SAN7137CN.
- Includes UHF Antenna.
- Can provide copy of manual if desired
- $135.00 plus shipping

This radio works great on the UHF Ham Band, but is way more rugged than just about any amateur grade HT. Of course it also works great on commercial frequencies as well.

Radio is in great physical shape and has been tested and works fine. Batteries and chargers are available from many sources including Ebay.

I have a friend who works at the local radio shop who can program a few channels at no extra cost.

---

Motorola UHF GP300
- 16 Channels
- Drop-in charger.
- With UHF antenna.
- Includes Battery.
- Model: P94YPC20C2AA
- USA Model with FCC ID.
- Will do PL and DPL (Digital PL)

- Copy of manual available
- $165.00 plus shipping

This radio is in great condition. Pictures can be emailed.

This radio works great on the UHF Ham Band, but is way more
rugged than just about any amateur grade HT. Of course it also
works great on commercial frequencies as well.

A speaker mike can be added for an additional $30.00.

---

Motorola Radius VHF P1225 HT
Model: P93ZRC90A2AA
FCC ID: ABZ99FT3071

$145.00

Includes Battery and Antenna.

A drop-in charger can be added for an additional $35.00.
Speaker Mike $30.00.

Motorola Suitcase Repeater
- UHF
- Securenet Encryption
- Includes Speaker Mike
- Does not have internal duplexer or battery
- Contained in a Halliburtion Zero Case
- Copy of instruction card
- $365.00

Front Panel Features:
- Code select switch
- Encryption on/off switch
- Repeater on/off switch
- Power level switch
- Mike jack
- Code insert jack
- Power on/off/charge switch
- Channel selector: 1 - 8
- Volume Knob
- Squelch Knob

This unit needs an internal duplexer. It appears to have Securenet
encryption, but the specific type is unknown. The battery is not
included. Sold as-is.

---

Motorola Encryption Equipment For Sale:

Key Loaders (KVL):

Motorola T3011DX DES/DES-XL KVL w. Hybrid, Batt & Charger: $575.00

Motorola T3020AX DES KVL w. Charger: $145.00 w/o hybrid, $195.00 w. hybrid

Motorola DVP KVL w, Charger & Hybrid: $495.00

Securenet Encryption Modules (Hybrids):

DVP Secure Hybird Module TRN6777B for Spectra, Syntor, KVL: $135.00

DES Hybrid TRN4836A for Spectra, Syntor, KVL: $125.00

Motorola Saber DVP-XL Securenet Encryption module NTN4713B $85.00 (SOLD)

Motorola Saber DVP Securenet Encryption module (hybrid) $85.00

Key Loader (KVL) Cables:

TKN8229C (equiv) KVL cable, KVL to KMC keyloading: $72.50 ($152.00 from Mot)

TKN8209C (equiv) KVL cable, keyload MX: $39.50 ($75.00 from Motorola)

TKN8210C (equiv) KVL cable, keyload micor: $39.50 ($75.00 from Motorola)

TKN8351B (equiv) KVL cable, KVL to Hirose:

See list below for radios that support encryption.

Other Motorola Radio Equipment For Sale:

Motorola UHF MTS2000 HT: $350.00

Motorola UHF JT1000 HT: $645.00 (SOLD)

Motorola UHF Astro Spectra: $585.00 (see above for details)

Motorola VHF Expo with Encryption: $165.00 (6 available, same freq)
Package available with all 6 radios, 6 position charger, KVL and cable

Motorola GP68 UHF: $225.00 (Radio, Charger, Battery, Antenna)
Field programmable, Full Keypad.

Motorola GP68 VHF: $245.00 (Radio, Charger, Battery, Antenna)
Field programmable, Full Keypad.

Motorola UHF GP300 (see above for details)

Motorola GP300/GP68 Speaker Mike: $35.00

Motorola VHF Saber I Securenet: $275.00 (w/o hybrid)

Motorola UHF Saber I Securenet: $275.00 (w/o hybrid)

Motorola UHF Saber I: $135.00 (see above for details)

Motorola UHF Saber IE: $135.00

Motorola Saber Six radio charger/battery reconditioner RLN1001A

Motorola UHF Visar HT: (email for details)

Motorola Visar HT (800 MHz) with battery and antenna: $125.00

Motorola UHF P200: $115.00

Motorola UHF P200 (T-Band): $115.00

Motorola Convertacom for P200, HT600 (Genesis Series HTs): $45.00

Motorola P200/MTX drop-in charger: $35.00 ($25.00 if bought with radio)

Motorola Radius P10 HTs, Lot of 6 on same freq (Itinerant "Red Dot")

Motorola 900 MHz Spectra: $135.00 (Radio Only, No accessories)

Motorola 900 MHz MTX-900 HTs. Trunking or Conventional, 4 Available

Motorola Spectra HHCH Mike (Hand Held Control Head) Model YCN4021A

Motorola Spectra Desk Mike: $35.00

Motorola UHF MCX1000 Mobile: $135.00
(Includes mike, speaker & power connector)

Motorola Expo Charger: $30.00

Motorola Expo Charger cup: $15.00 (quantity discount)
(power adapter or DC power cable not included)

Motorola Spectra Siren cable: $55.00

Motorola Spectra Siren Unit with DEK Controller and Cable: $125.00

Aftermarket RIB for Motorola radios: $85.00 (no software available)

Contact me for details.

Hello
I am doing some mods on my old Sangean ATS-803A but there are some
difference
between the my old ATS-803 schematic from 1986 and the radio. I�m intrested
in the part of the PCB with AM-MF and the BFO.
The receiver i also sold as Radio Shack DX-440, Siemens RK-651 and ESKA
DX-33.
I doing sync AM and DRM-mod on the radio and hope someone can help me with a
copy of that part of the radio.

Regards

Kjell Bjornfors

It would seem if the signal has interference on it when received via
AM, that interference would still be there when rebroadcast on FM. I
just don't think that you gain anything by rebroadcasting in FM;
garbage in/garbage out.

You might look at something like the ClearSpeech speaker...

http://www.nct-active.com/css.htm

Another possibility is the GAP Hear It speaker...

http://www.universal-radio.com/catalog/speakers/0749.html

Both speakers have built in noise-cancelling systems that could
possibly filter out the noise at your location.

You would need to be able to plug an external speaker into your AM
radio -- or just go into the radio an detach the speaker leads and use
them for your external speaker with its noise-cancelling system.

# 4401. Re: Help with a AM to FM converter

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-10 00:59:24 UTC
From: Robert Kubichek <bobn9lvu@lakefield.net>
Message-ID: <41181DEC.1010105@lakefield.net>
Source record: 20003

What I would do, is;

1) Mount several -(2)- AM radios in a weatherproof enclosure on roof, take the output of each through a shielded cable to an impedance matching transformer or in line match then to a (1) stereo FM transmitter. Each AM radio is either right or left channel inputed to transmitter. That gives you 2 AM frequencies per FM transmitter if you have a stereo receiver.

2) Same idea as above, but output goes to both sides (L+R) of FM transmitter. Can be used with any FM receiver, but costs more...

Do a search for FM transmitters, there are many to be found, from kits, to digital ready made..

As a final thought, the RF FM output should go to a set of vertical antennas mounted upside down (ground plane to ceiling) located centrally in building for best coverage. Depending on output power and radiated signal, you should have ample coverage.

Why. You have to run the thing to catch it. I have the defaults
turned off, I use Agent as a news reader, and Firefox as a Browser..

You should see the code in some of these. They are adding Netscape as
well as Explorer.

# 4418. IC-2AT and 12 Volt Power Source

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-10 17:06:28 UTC
From: "R.M" <usenetjunk@usenetjunk.com>
Message-ID: <4119009A.8040705@usenetjunk.com>
Source record: 20020

I have a IC-2AT that I'm wanting to use as a Fox Hunt Transmitter. From what I understand feeding 12 volts directly into the radio will cause problems. As such, I plan to drop the voltage from 12 volt to 9 volts, however I don't know the best way to do this. I thought about using a voltage regulator, but all the regulators I have seem are only rated to 1 amp. After some searching I found the IC-2AT pulls 1.2 amps on transmit. The power source is going to be a 6 Amp Hour 12 volt battery. What would be the best way to step the voltage down to 9 volts, and still allow plenty of current to last an hour or more on transmit.

Thanks for any assistance

Although the 7809 and similar fixed-voltage regulators are often
limited to 1 amp, the LM317 adjustable regulator is rated for 1.5 amps
maximum current.

You'd need an LM317, a modest-sized heatsink, two resistors (to set
the voltage), and a couple of capacitors (to ensure stability). The
two resistors will form a voltage divider network between the
regulator's output terminal and ground, with the LM317's "ADJ" pin
connected to the junction of the two resistors. You'll want the two
resistors to be sized so that they draw at least 5 mA of current from
the output (10 mA might be safer) - the LM317 needs a minimum load to
regulate properly.

The LM317 needs between 2.0 and 2.5 volts of headroom, between the raw
supply and the output voltage, in order to regulate properly - it'll
"drop out" if the supply voltage drops too low. For a 12-volt-nominal
battery and a 9-volt load, this shouldn't be a problem.

You could use a series/parallel string of 1N4002 rectifier diodes (or
similar) as a voltage dropper, but the regulation would be distinctly
poorer and I don't know that it'd be any cheaper.

# 4422. Re: IC-2AT and 12 Volt Power Source

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-10 20:03:28 UTC
From: k5dh@raytheon.com
Message-ID: <kS9Sc.5$1i.4@dfw-service2.ext.ray.com>
Source record: 20024

You definitely do not want to feed 12 VDC directly into
the IC-2AT. Smoking components will result!

One option, although it may be a bit of a "tall order",
would be to obtain the Icom DC-1 module. This was the
optional DC-DC converter that Icom sold to go with the
IC-#AT series. It slid onto the bottom of the radio in
place of the NiCd pack and took a 13.8 VDC input and
down-coverted it to a regulated voltage (probably 9.0
VDC; sorry, fuzzy memory here!) that the radio could
handle safely. DC-1's are not easy to come by these
days, but it's worth a try. Try searching eBay.

If you decide to build your own (which should be an
easy task, as others have suggested), I suggest you
mount it inside a dead battery pack housing so that
it will easily slip on and off the radio, just like
the DC-1.

73,
Dean K5DH

I have the following items for sale. Prices do not include shipping. I
will ship overseas.

Hammarlund HQ-129X Speaker.....$35 plus shipping
Needs repainting. Rusty but works and does sound good
http://members.cox.net/radiostuff9/hamm_spkr.jpg
http://members.cox.net/radiostuff9/hamm_spkr3.jpg

MacElroy Bug.....$40 plus shipping
This is a project key as the mainspring is broken and will need to be
replaced - seen in photos.
http://members.cox.net/radiostuff9/mcelroybug.jpg
http://members.cox.net/radiostuff9/mcelroybug2.jpg
http://members.cox.net/radiostuff9/mcelroybug3.jpg

Heathkit C-3 Capacitance Meter.....$35 plus shipping
Nice working capacitance checker with photocopy of manual
http://members.cox.net/radiostuff9/heathc3.jpg

Heathkit SG-7 Signal Generator.....$35 plus shipping
Nice working signal generator that covers 160 kHz to 500 MHz with
photocopy of manual
http://members.cox.net/radiostuff9/heath_sg7.jpg

NOS Cold War Relic - Civil Defense - Radiological Survey Meter.....$75
plus shipping
These are NOS NIB meters painted in Civil Defense yellow with a neat
Civil Defense logo left over from the cold war. These were to be used
for checking for radiation after a nuclear attack. Includes manual, an
original but now dead vintage battery (note the 20 cent price), remote
cable (not shown but stored in the unit), and carrying case. A neat
collectible for your 1950ï¿½s or 1960ï¿½s station to set by your CONELRAD
alarm. I have a whole bunch of these.
http://members.cox.net/radiostuff9/cd_meter.jpg
http://members.cox.net/radiostuff9/cd_meter2.jpg
http://members.cox.net/radiostuff9/cd_meter3.jpg
http://members.cox.net/radiostuff9/cd_meter4.jpg
http://members.cox.net/radiostuff9/cd_meter5.jpg
http://members.cox.net/radiostuff9/cd_meter6.jpg
http://members.cox.net/radiostuff9/cd_meter7.jpg

Hewlett Packard HP3400A RMS Voltmeter.....$40 plus shipping
This is a tested, working unit. It does not include a power
cord. It does include a copy of the manual on CD
http://members.cox.net/radiostuff9/hp3400a.jpg

http://members.cox.net/radiostuff9/hp3400a2.jpg
http://members.cox.net/radiostuff9/hp3400a3.jpg

Hewlett Packard HP400E AC Voltmeter.....$30 plus shipping
This is a tested, working unit.. It does not include a power
cord. It does include a copy of the manual on CD.
http://members.cox.net/radiostuff9/hp400e.jpg
http://members.cox.net/radiostuff9/hp400e2.jpg
http://members.cox.net/radiostuff9/hp400e3.jpg

Realistic DX-160 Communications Receiver & Matching Speaker......$125
plus shipping
This is a 5 band solid state receiver that covers 150 kHz to 30 MHz. It
has a BFO for CW and SSB reception and bandspread for the ham bands.
This radio will run on 110 volts AC or you can run it from a 12 volt
battery. Other than a few very minor scuffs, this receiver is in really
nice shape and works well on all bands. I even heard some signals down
in the VLF band. Includes a photocopy of the manual.
http://members.cox.net/radiostuff9/dx160.jpg
http://members.cox.net/radiostuff9/dx1603.jpg
http://members.cox.net/radiostuff9/dx1602.jpg
http://members.cox.net/radiostuff9/dx1604.jpg
http://members.cox.net/radiostuff9/dx1606.jpg

National Type MCN Dial.....$25 plus shipping
Used but good condition with a clean dial face
http://members.cox.net/radiostuff9/natdial.jpg
http://members.cox.net/radiostuff9/natdial2.jpg

Schaub Lorenz "T30L Weekend" German Portable Radio.....$40 plus shipping
This is a Portable Radio made in Germany. As near as I can determine
this radio is from the late 1950's or early 1960's. This is a 3 band
transistor radio that covers long wave, medium wave (standard broadcast
band) and FM. The radio is in beautiful shape cosmetically but it is not
working. I can hear weak audio from the speaker but no stations. Their
is no battery acid damage. The two antennas are in good shape. The
insides are clean.

I remember the "causes trouble" on the back I think. Always made me laugh.
Anyway, I think it will run on 6 volts DC, just a bit less output. That
might be the easiest way??

Anybody out there know any info on this brand?
Question, I got my hands on a Yshon AT-308/C handi.
The "C" version operates from 450-470MHz.
There must be a way to change this to 430-450MHz.
Other versions of this radio work in this range, and many others.
Any clues out there on how to do this??
Maybe a simple keypad trick while turning the power on?
Maybe solder pads on one of the circuit boards?
Any help would be great!!

Take a listen to the new radio song . . . Q R S by Hindsight...written
and performed by radio guys.

Visit http://www.radiointel.com

Click on the Q R S logo on left side of home page.
This takes you to the Hindsight page, scroll down and click on Q R S
logo for the player. You can pull up lyrics also.

Feedback very welcome & appreciated...here or to
hindsight@radiointel.com

Thank you

Shiny! DC-to-daylight, lots of features. Dual this, multiple that, passband t'other, panadaptor displays. It's enough to overflow my PC's glitz buffer.

Who knows, it may even be as sensitive as my FRG-100 in the HF bands. I don't expect it to be as sensitive as my R-390, but it does cover a lot more territory.

National Semiconductor makes an adjustable TO-220 package regulator that can handle 5 amps.
It is available from Digikey.com for$2.11. Part number is LM338T-ND
Check National's web site for an application note with typical circuitry.
You will probably need a metal case to heatsink it.

I don't think sensitivity is much of an issue especially on HF. However,
one thing that caught my eye was the IP 3. It was in the 'watts' range.
Useful for the multi op contesters, I'm sure. I also here the simulated
meters are pretty neat.

# 4437. Coils or specifications needed for Heathkit GD-1B Grid Dip Meter.

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-12 07:36:40 UTC
From: Bob <no@spam.com>
Message-ID: <sf7mh0ldbmqkkecop397pbjon3s2o2ua9q@4ax.com>
Source record: 20039

I have a Heathkit GD-1B grid dip meter that is missing the coils. Kind
of useless without them, as you can imagine. What I am hoping is that someone
has:

1) An set of coils that they are willing to part with.
or
2) Information about where I can get coils of it.
or
3) Specifications on how to make my own. Things like coil dimensions, wire
sizes, number of turns for each, etc., etc.

Any help would be greatly appreciated. It would be nice if I can get
this thing working so I can "play" with it. You know how it is. Thanks to all.

73, Bob KB2ZGN

Message-ID: <411b331c$0$34762$e4fe514c@news.xs4all.nl>
Source record: 20040

I'm not sure if the IC-T2A can do full power TX for extended periods,
as required for a fox transmitter. If you switch it to low power,
then the current will be lower and hence less of an issue.

Keep in mind that most fox hunting is *AM*.
This is actually not difficult: locate a mobile rig with ALC/SWR protection
(a crystal rig is fine), adjust it to 1/4 of the max rated power, then
insert the audio modulation through a capacitor to the SWR/ALC circuit.
With luck, the ALC circuit will nicely modulate the PA in AM.

With the rigs I used, the modulation was clean, not exactly linear but
sufficient for wobbler tones or EISH5 as required for fux hunting.

As a benefit, mobile rigs (especially when turned down) stand a batter
chance of being able to survive 100% key-down for a fox hunt, as it's
heat design will be better than the T2A handheld..

Cheers,

Geert Jan PE1HZG

Source record: 20041

Bob -- the specs from the meter manual are:

L1 - (1.6 - 3.4 MHz/Red) = 171 ?H [that's micro if the symbol didn't come thru]

L2 - (3.2 - 6.6 MHz/Orange) = 41.1 ?H

L3 - (6.3 - 13 MHz/Yellow) = 10.2 ?H

L4 - (12.5 -26 MHz/Green) = 2.62 ?H

L5 - (25 - 51 MHz/Blue) = 0.72 ?H

L6 - (48 - 100 MHz/Violet) = 0.196 ?H

L7 - (100 - 250 MHz/Brown) Unfortunately there is no spec for this coil. Looking inside the coil form it looks like a single "U" shaped loop constructed from wire that has an outer diameter of about 1.28mm [kinda tough to get my micrometer inside the form!] and is about 2.4mm long.

The coil forms are about 13.2mm outer diameter and about 34mm long (except for L7 which is about 15mm long); I can't tell the diameter of the magnet wire used but it's very thin for L1-L3. I'd count the turns for you but it's too hard with these old eyes, so here are the lengths of the coil turns:

L1 - 30mm

L2 - 9.7mm

L3 - 8mm -- thicker gauge wire so fewer turns

L4 - 10.7mm -- 17 turns thicker again wire

L5 - 6.5mm -- 6 turns

L6 - 2.5mm -- 2 1/2 turns

Wish I could measure the wire gauge for you....

Hope this helps

Dino KLOS/4

The 1st Amendment guarantees only that the Government won't imprison,
torture, or otherwise go after you for voicing your opinions. It makes
no guarantee that
someone ELSE might not kick your ass for it. I hear all this whinning
all the time regarding the 1st Amendment. Linda Ronstadt found out
about the 1st Amendment when she got kicked out of a venue in Las
Vegas a few weeks ago for voicing her opinion. Whoopi Goldberg (is she
a Jewess ? Is her name really Whoopteesha ?)learned about it, too, as
did Mike Moore. Sure , you can say whatever you want, but be prepared
to pay the consequences.

# 4445. Transformers 4 sale

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-12 18:20:28 UTC
From: Teleski <crag@cableone.net>
Message-ID: <10hnd9ede6mbj96@corp.supernews.com>
Source record: 20047

Gentlemen (and homebrewers still kicking ...)

I have about 1.5 tons (+/-) of transformers and chokes of
all sizes to sell (maybe 150). All sizes up to some big ones. Plate,
filament, power transformers, RF, smoothing chokes, a few swing chokes
(2 to 10h, a few 10 to 30h, most around .35A), you name it. 5v 6.3v,
10v, 12v, 120v, and high voltage/power ones. Inputs mostly 120 & 230 or
330 or variants thereof. Generally 1 to about 30 amps. Many with various
center taps (multiple volt/current). Most are barometric sealed or oil
filled with the schematic printed on the cover like FAA and military uses.

Multiple leads or simple 2 wire in 2 out. many are combination
plate and filament power. Weight from a few ounces to barely able to
pick up, so shipping can be a problem. Some are old, scavenged from old
gear, some were replacements parts never used.

Email me with your requests at KD7QAT@cableone.net or call me
at (208) 343-6231 and we'll see if we can find what you need, at a
reasonable price. Most of the money will go to the guy who gave them to
me (before he dies I hope). Don't expect instant replies, but I will
check the email several times a week. Remember- One of your most
interesting operating privileges is being able to build 1 RF Amp a year,
--Make it a BIG one, or repair that radio with the burned up brick.

Also have a case of 12v 160000 mfd Mallory Capacitors, new
(about 3"x5-7/8") (Tentatively priced at $25.00 each plus shipping).
Probably best used to buffer the big load some mobile radios put on puny
electrical systems when transmitting. Go easy on me as I haven't the
depth of knowledge on some of this stuff that some of the E.E.`s seem to...

Thanks,
KD7QAT

# 4449. ICOM PS-125 Power Supply Glitches?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-12 22:24:58 UTC
From: munged@address.com
Message-ID: <1092349498.613131@cswreg.cos.agilent.com>
Source record: 19901

The operating manual for the Icom PS-125 power supply states an order of sequence for power up/down. It says supply on first, then load. Then load off/supply off in that order.

When I asked Icom Tech support why, they said it was to make sure no glitches got to the load (in this case a 756ProII.)

When I pull the "Big Switch", everything goes off. Anyone ever heard of the PS-125 blowing its load? (Oops, you know what I mean).

for a multi band multimode rig, take a look at Icom IC706, Yaesu FT 857/897
they do up to 70cm, but don't do 220 AFAIK. I have the FT 857 in my car.
as for FM / AM handies. the Yaesu VX7 is fun .. 50,144,220,440. (My wife
has one)

The VX7 and the 857 can do AM airband etc etc.

Thanks Dino for the thorough explanation and specs for the coils, it is greatly appreciated. If someone else doesn't come up with wire gauges, (or a whole set of coils they are willing to part with) the information you provided is more than enough to replicate the coils. Thanks for all the work you put into providing this information.

Did you see the One Page Add by Icom in QST?

Please visit the Icom Website and download the videos.
http://www.icomamerica.com/amateur/video/

The first two videos gave a great overview of Dayton from an Icom Marketing perspective.

The third video was an great production demonstrated by two teenage amateurs Trevor and Sara.
I would like to suggest you put this video on a CD and send your kids to school with it and let them play it for there friends.
Play it at your next amateur radio event for others to see.

I would like to thank John Webb - W7NWH and Icom for producing these videos to help promote the hobby.
Wouldn't be great to get something like this on TechTV or get a corporate sponsor to use this to market our hobby as well as there product.

Hello All,

I am in the process of fitting my TS-450 into the family Landcrusier.
The problem I have found is, that even though the Landcrusier is a big
vehicle, it still lacks the space to fit a large size rig. Even having
problems fitting a TM-742 VHF/UHF rig.

Before I go through a lot of pulling out hear, which there is not much of it
left, I would like to know if anyone else has fitting a rig of this size
into a Landcrusier. I would think a few Ozzies might of.
I want to make the install safe, easy to access, use the controls on the
rig, and be able to see the display.
Any help would be grateful.

Regards

Kevin, ZL1KFM

Hi Kevin, wishing you luck as you will need it.
A mate managed to fit a Yaesu 757 into his 60 series cruiser, but with an 80 series, you will be very lucky to find anywhere that will be safe and not in the way of other people. There are two areas that I can think of - firstly on the transmission hump on the passengers side - but it is a reasonable sized radio and will take up a fair bit of room for the front seat passenger. Not sure if she who must be obeyed would approve of that.
Second spot is between the front seats (assuming that you don't have a bench seat or the arm rest unit between the seats). It is a bit of an ambuggerance and does require you to take your eyes off the road, but you have very little option with a radio that size. You will have to ensure that you do not kill off the ventilation for the radio though.
I have a 94 cruiser and have gone for an Alinco DX70TH with a remote head that is mounted on the bottom of the dash. The remote head for my Codan is sitting on the transmission hump - but there is a bit of a size difference between the remote head and the 450 though I guess.
Unfortunately with modern vehicles, there is not a lot of room to play, so mayve you can use this as an excuse to upgrade your HF gear, get ready to go on your hands and knees in front of SWMBO.

Matt

Hi Matt,

My Cruiser has the factory cooler and arm rests. So this area is out of the question. Did look at the passenger side transmission hub, however when I put the radio in as a trial, it restricted the leg room (not by too much), and it also does not permit the glove-box from being open.

Kevin.

If you still want to stick with the TS-450, about the only other possible option would be an overhead console, but I personally would not go down that path - from experience it is a right royal pain in the proverbial to use a radio in the console when mobile. I now have all the freqs I use programmed into the radio, but still need to have the occaisional glimpse up there if I travel out of my normal area and need a different freq. Suspect it may be time to get a new and smaller one - maybe the 706 IIG??

You can't be serious. Sell the damn thing and get a smaller radio like a
70611G or a FT100D.
I know they cost more money, but then you have more bands to play with.
Most blokes could save that much by not smoking or drinking for a month.

> information. Much appreciated.

I believe that it uses the same protocols as the Spectracom
8170, which is well documented in many places including the NTP
source code. From refclock_wwvb.c:

```
* This driver supports the Spectracom Model 8170 and Netclock/2 WWVB
* Synchronized Clocks and the Netclock/GPS Master Clock. Both the WWVB
* and GPS clocks have proven reliable sources of time; however, the
* WWVB clocks have proven vulnerable to high ambient conductive RF
* interference. The claimed accuracy of the WWVB clocks is 100 us
* relative to the broadcast signal, while the claimed accuracy of the
* GPS clock is 50 ns; however, in most cases the actual accuracy is
* limited by the resolution of the timecode and the latencies of the
* serial interface and operating system.
*
* The WWVB and GPS clocks should be configured for 24-hour display,
* AUTO DST off, time zone 0 (UTC), data format 0 or 2 (see below) and
* baud rate 9600. If the clock is to used as the source for the IRIG
* Audio Decoder (refclock_irig.c in this distribution), it should be
* configured for AM IRIG output and IRIG format 1 (IRIG B with
* signature control). The GPS clock can be configured either to respond
* to a 'T' poll character or left running continuously.
*
* There are two timecode formats used by these clocks. Format 0, which
* is available with both the Netclock/2 and 8170, and format 2, which
* is available only with the Netclock/2, specially modified 8170 and
* GPS.
*
* Format 0 (22 ASCII printing characters):
*
* <cr><lf>i ddd hh:mm:ss TZ=zz<cr><lf>
*
* on-time = first <cr>
* hh:mm:ss = hours, minutes, seconds
* i = synchronization flag (' ' = in synch, '?' = out of synch)
*
```

```
* The alarm condition is indicated by other than ' ' at a, which occurs
* during initial synchronization and when received signal is lost for
* about ten hours.
*
* Format 2 (24 ASCII printing characters):
*
* <cr><lf>iqyy ddd hh:mm:ss.fff ld
*
* on-time = <cr>
* i = synchronization flag (' ' = in synch, '?' = out of synch)
* q = quality indicator (' ' = locked, 'A'...'D' = unlocked)
* yy = year (as broadcast)
* ddd = day of year
* hh:mm:ss.fff = hours, minutes, seconds, milliseconds
*
* The alarm condition is indicated by other than ' ' at a, which occurs
* during initial synchronization and when received signal is lost for
* about ten hours. The unlock condition is indicated by other than ' '
* at q.
*
* The q is normally ' ' when the time error is less than 1 ms and a
* character in the set 'A'...'D' when the time error is less than 10,
* 100, 500 and greater than 500 ms respectively. The l is normally ' ',
* but is set to 'L' early in the month of an upcoming UTC leap second
* and reset to ' ' on the first day of the following month. The d is
* set to 'S' for standard time 'I' on the day preceding a switch to
* daylight time, 'D' for daylight time and 'O' on the day preceding a
* switch to standard time. The start bit of the first <cr> is
* synchronized to the indicated time as returned.
```

Tim.

>Tim.

Tim,

thank you for your response. This clock does not receieve the WWVB signal
directly, instead it is inputed via a WWVB receiver. The receiver that
can be used are the 8160,8161, 8164, and 8165. At this point I guess I need
one of those receivers.

Dennis

Been there, done that. The only real solution is to swap the radio for
something smaller, preferably with a remote head. Or operate without SWMBO.

Cheers

# 4487. Saber III Securenet UHF set of radios

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-14 20:40:52 UTC
From: Michael <paracop@bellsouth.net>
Message-ID: <411E78D4.CA07A331@bellsouth.net>
Source record: 19939
Cross-posted to: rec.radio.swap,rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.swap,rec.radio.lmr-commercial,alabama.brimingham.radio.amateur

I have 2 Saber III UHF Securenet radios with DES-XL installed in them
and working currently, the radios are 8/10. I also have the T3011 BX KVL

Keyloader for the DES-XL so you can change your Securenet "key". I have
2 smart chargers for the radios and a charger for the KVL. The KVL has a

new battery bought last year I think and the radios have several
batteries bought over the past several years. I also have the
instruction book
for the KVL (something hard to find now days). The radios also have
antennas
with them. I will gladly program 10 channels in them for you for
nothing. I am
still currently using these but will be upgrading them soon to an APCO
25
SmartZone Astro XTS5000 III 800MHz so I am looking to sell these as
a unit only and will not break the set. Please contact me off line for
more
information. Located in zip 35080. $2000.00 for the entire setup.
Shipped
only in the USA since there are DES-XL boards installed.

Charles, N5PVL:

I'm sure very little thats politicised is ever straightforward!
I read a long story in the Raleigh newspaper that showed the local ham club working in the field with the power company to insure fcc compliance and a ham-friendly relationship. This arrl clip was from may'04. My recollection was that the news story was about the same time.

Its about time for an update.

FYI, my Heath solid state dipper, the HD-1250, seems to have coils
that are identical to those the other gentleman is describing. Coils
from the 1250 would apparently work with your vacuum tube model.

Hi All;
I have this neat and Hi-Quality built CW Filter by G3PPD, might be british made. Applied 12 volts to it via jacks in back and seems to work fine. Something for the CW-Head to play around with, can be bypassed also.
Price is $30.00 + Postage.

Here in Raleigh NC, Progress Energy has closed down the BPL testing for now.

Duke Power Co. and other companies in the state plan on testing their BPL.

# 4507. Is this a Ham IV rotor or Ham III ?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-16 19:18:29 UTC
From: PDT <pmtree@graffiti.net>
Message-ID: <1M7Uc.50439$vO1.256544@nnrp1.uunet.ca>
Source record: 19959

I have a CDE rotor that I think is a Ham IV.
Date stamp on the bottom is July 79.
Can anyone tell me if it is a III or a IV.

The controller is a Ham M (old brown case) but was not from this unit I am pretty sure.
TIA

# 4510. Saber III Securenet with KVL UHF set

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-17 03:22:18 UTC
From: Michael <paracop@bellsouth.net>
Message-ID: <412179EA.96B0A2E4@bellsouth.net>
Source record: 19962

I have 2 Saber III UHF Securenet radios with DES-XL installed in them
and working currently, the radios are 8/10. I also have the T3011 BX KVL

Keyloader for the DES-XL so you can change your Securenet "key". I have
a smart charger for the radios and a charger for the KVL. The KVL has a
new battery bought last year I think and the radios have several
batteries bought over the past several years. I also have the
instruction book
for the KVL (something hard to find now days). The radios also have
antennas
with them. I will gladly program 10 channels in them for you for
nothing. I am
still currently using these but will be upgrading them soon to an APCO
25
SmartZone Astro XTS5000 III 800MHz so I am looking to sell these as
a unit only and will not break the set. Please contact me off line for
more
information. Located in zip 350xx. $2000.00 for the entire setup.
Shipped
only in the USA since there are DES-XL boards installed.

# 4528. wire antenna

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-17 21:29:41 UTC
From: Tim Boyd <timboyd@tds.net>
Message-ID: <41227aa7$1_3@newspeer2.tds.net>
Source record: 19980

I have installed a inverted V wire antenna. I have it connected with a 1:1 balun at 30 feet from the ground. The center wire is 66 ft 6 in long. The end is 8 feet from ground. The other leg is 28 ft long and attached to the roof of my house (appox 20 feet). I am getting started in MARS and need to transmit around 3.350 MHZ. What can I do to this antenna to tx around that freq ? Right now the antenna works from 40 meters to 6 meters with my MFJ 945 tuner. I was thinking I could make a wire trap for it. Thanks for any ideas.
"73"
Tim

I have the following items for sale. Prices do not include shipping. I
will ship overseas.

Western Union Legless Telegraph Key.....$30 plus Shipping
http://members.cox.net/radiostuff9/wu_key.jpg

Western Union Legless Telegraph Key.....$30 plus Shipping
http://members.cox.net/radiostuff9/key5.jpg

Skillman Telegraph Key.....$35 plus Shipping
Popular Japanese key from the 1960ï¿½s that was imported to the USA
http://members.cox.net/radiostuff9/key2.jpg

Telegraph Key- Brand Unknown.....$30 plus Shipping
http://members.cox.net/radiostuff9/key3.jpg

Telegraph Key with Shorting Switch - Brand Unknown.....$35 plus
Shipping
http://members.cox.net/radiostuff9/key4.jpg

Philips 4-125A Power Tetrode Tubes - Pair.....$50 plus shipping
These tubes appear to be NOS. I checked filament continuity and they
test good. I don't have the capability to test them but from visual
inspection they appear to be new tubes. Here are the specs for the
4-125A. These tubes can be used to build a linear amplifier or a high
power audio amplifier.
http://members.cox.net/radiostuff9/4125tubes.jpg

Eimac 450TH/VT-108 Transmitting Tube.....$50 plus shipping
I have checked filament continuity which is good but have no way to test
beyond that. the tube is in excellent condition and may well be NOS but
I really have no way of knowing for sure. This came from an estate.
Specs are shown below.
http://members.cox.net/radiostuff9/450th.jpg
http://members.cox.net/radiostuff9/450th2.jpg
http://members.cox.net/radiostuff9/e450th.jpg

Eimac 25T Power Triode Transmitting Tube.....$25 plus shipping
I did check the filament for continuity and it is OK. No other way to
test.
http://members.cox.net/radiostuff9/eimac25t.jpg

Large Precision Multi-Section Capacitor & Dial Assembly.....$60 plus
shipping
This almost looks like it came out of a National HRO receiver but it did
not. The capacitor contains 8 sections. Each section measures

approximately 85 pf minimum and 360 pf max. The assembly is in excellent condition and would be a neat assembly for a home-brew receiver project.

http://members.cox.net/radiostuff9/cap_assy.jpg
http://members.cox.net/radiostuff9/cap_assy3.jpg
http://members.cox.net/radiostuff9/cap_assy5.jpg

3 Multi Position Rotary Switches.....$35 plus shipping
These are not your standard rotary switch. Two have more than 20 positions. These came out of a military W.W.II static impedance bridge. They look like new but you will need to remove the inductors. The shafts are standard 1/4ï¿½ but they have removable adapters. These would be great for an antenna tuner project.

http://members.cox.net/radiostuff9/bigswitches3.jpg
http://members.cox.net/radiostuff9/bigswitches4.jpg
http://members.cox.net/radiostuff9/bigswitches5.jpg

Eico High Voltage Probe.....$25 plus shipping
http://members.cox.net/radiostuff9/eico_hvprobe.jpg

Batch of W.W.II Crystals.....$50 plus shipping
39 Crystals. See photo for frequencies. Here is a link to the frequency conversion chart
http://members.cox.net/n7rk/ft241_xtal_list.jpg
http://members.cox.net/radiostuff9/xtal_batch.jpg
http://members.cox.net/radiostuff9/xtal_batch.jpg

NOS Cold War Relic - Civil Defense - Radiological Survey Meter.....$75 plus shipping
These are NOS NIB meters painted in Civil Defense yellow with a neat Civil Defense logo left over from the cold war. These were to be used for checking for radiation after a nuclear attack. Includes manual, an original but now dead vintage battery (note the 20 cent price), remote cable (not shown but stored in the unit), and carrying case. A neat collectible for your 1950ï¿½s or 1960ï¿½s station to set by your CONELRAD alarm. I have a whole bunch of these.
http://members.cox.net/radiostuff9/cd_meter.jpg
http://members.cox.net/radiostuff9/cd_meter2.jpg
http://members.cox.net/radiostuff9/cd_meter3.jpg
http://members.cox.net/radiostuff9/cd_meter4.jpg
http://members.cox.net/radiostuff9/cd_meter5.jpg
http://members.cox.net/radiostuff9/cd_meter6.jpg
http://members.cox.net/radiostuff9/cd_meter7.jpg

Hewlett Packard HP3400A RMS Voltmeter.....$40 plus shipping
This is a tested and is a working unit. It does not include a power cord. It does include a copy of the manual on CD
http://members.cox.net/radiostuff9/hp3400a.jpg
http://members.cox.net/radiostuff9/hp3400a2.jpg
http://members.cox.net/radiostuff9/hp3400a3.jpg

Hewlett Packard HP400E AC Voltmeter.....$30 plus shipping

This is a tested and is a working unit. It does not include a power
cord. It does include a copy of the manual on CD.
http://members.cox.net/radiostuff9/hp400e.jpg
http://members.cox.net/radiostuff9/hp400e2.jpg
http://members.cox.net/radiostuff9/hp400e3.jpg

National Type MCN Dial.....$20 plus shipping
Used but good condition with a clean dial face
http://members.cox.net/radiostuff9/natdial.jpg
http://members.cox.net/radiostuff9/natdial2.jpg

Jackson Model 103 Tube Tester.....$30 plus shipping
Older tube tester in working condition.
http://members.cox.net/radiostuff9/jacksontubetester.jpg
http://members.cox.net/radiostuff9/jacksontubetester2.jpg

Thanks for looking.

# 4530. Re: wire antenna

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-18 02:47:40 UTC
From: Butch <lynyrd@cableone.net>
Message-ID: <10i5gqrcp7e87cc@corp.supernews.com>
Source record: 19982

Tim,
Rule of thumb for finding the length of the dipole for a particular frequency is to divide the frequency (in mHz) into 468. So in your case 3.350 into 468 is 148.66 divided by 2 (length of each leg of the dipole) is 74.33 ft. Nothing is perfect because Murphy is allways around, so the thing to do is use a tuner or find out just where that 74.33 ft. on each leg is really resonant and cut or add wire as needed to get you to that 3.35 freq you need. Remember to cut or add the same amount on each leg.

Gud luck Tim es 73

# 4533. Weird Problem With Icom 2100H

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-18 07:58:56 UTC
From: <>
Message-ID: <41230a5f.4287279@news.usol.com>
Source record: 19985

I've had the Icom 2100H for several years with little use, but not long ago I attempted to set the scanning band limits and was unable to do so. Following the manual's instructions I reset the CPU / cleared all memories etc. Now I can program memory frequencies but I can't program any subaudible tones and I've noticed that the radio will now transmit from 140 MHz to 150 MHz ? I don't know whether to send the now out of warranty radio back to Icom for repair or to eBay it as is and buy a different radio. Anyone ever heard of this problem before ?

FWIW: If I do sell the radio does anyone have anything good or bad to say about the Alinco DR135T ?

Thanks in advance !

73 Gary K8IQ

Mid-'80's ICOM R71A for sale. Recently removed from sailboat as I am looking for RX/TX capability and this SSB is RX only. It works. It shows no outward signs of any abuse. It comes with owner's manual and some schematics. No AC power cord.

Since anyone interested in such a machine knows its value, I'll ask that you simply make me an offer that will satisfy both of us.

# 4535. AR40 problem help

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-18 16:16:43 UTC
From: Alain <alain@truc.fr>
Message-ID: <41237d8f$0$22043$626a14ce@news.free.fr>
Source record: 19987

Hello
Looking for schematic about the AR40 (1982) rotator by CDE.
My problem is the rotor turns one moment then stop during a few minutes then
starts off again.

Thanks in advance for any help.
Alain

Message-ID: <4a618109.0408181342.353ea664@posting.google.com>
Source record: 19990

Looking for advice on my FT-90:

I recently did a reset on th radio (not complete reset, just defaults) and I lost all the extended receive in the rig-you can only tune now between 144-148 and 430-450 MHz. Does anyone know how to bring back the extended rx? Doesn't seem to be in the menu, and its not a problem with the band scan limits. I reset it again, and the extended receive didn't come back. Any ideas?

Ken, N2ZN

According to:
http://www.radiomods.co.nz/yaesu/yaesuft90.html

you need to do a 'Master Reset', as described, when turning on again,
assuming you've done the hardware mod in the first place.

# 4541. Texas Balloon Launch Team (BLT) to fly ham radio and GPS this saturday 10am

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-19 00:38:48 UTC
From: Craig Davidson <nospam@earthlink.com>
Message-ID: <sESUc.27239$9Y6.24209@newsread1.news.pas.earthlink.net>
Source record: 19993
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.amateur.space,rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.digital.misc

It's time again for the Texas Balloon Launch Team (BLT) to fly their 20th mission.

The Primary GPS APRS transmitter is on 440.950 Mhz FM

The Backup GPS system transmits on: 445.925 MHz FM

There is also a Crossband voice Repeater on the balloon which transmits on 446.000 MHz FM

In addition there will be a Live television Camera transmitting its signal on
1255 MHz FM

The balloon will take about one hour to rise to 100,000 feet where the balloon explodes and the electronics payload parachutes back to earth for another hour. You should be able to hear the balloon transmitting from over 300 miles away.

They will launch from the same airport in Wharton Texas ( http://www.airnav.com/airport/5R5 ) on Saturday morning at 10am and will use most of the same equipment as BLT 19 last year. If the frequencies or launch site change then I will post another message by Saturday morning. The airnav web page shown above has a handy distance calculator where you can enter the code for your local airport and it will tell you the distance from wharton.

The GPS coordinates transmitted from the balloon are used to locate the landing site.

The electronics package is also fitted with a Piezoelectric beeper to help the recovery
crew find the payload in "that last 100 feet of tall grass".

See the photos from previous missions at:
http://www.qsl.net/w5acm/b18_1825.html
http://www.qsl.net/w5acm/b18_1826.html
http://www.qsl.net/w5acm/b18_1827.html
http://www.qsl.net/w5acm/b19.html

For all the non hams out there:

The GPS data is transmitted in APRS format.

To learn more about APRS click here:
http://www.tapr.org/tapr/html/sigf.html
http://web.usna.navy.mil/~bruninga/aprs.html

Receivers are available from Ham radio stores such as Amateur Electronic Supply http://www.aesham.com/ or Ham Radio Outlet http://www.hamradio.com/ Or you could look on Ebay for a 440 MHz FM receiver. You can also get a police scanner from Radio Shack to do the job. Make sure it receives the proper frequency.

You also need an antenna. I recommend the arrow antenna to get started:

http://www.arrowantennas.com/146-437.html

You will also need a packet modem to decode the APRS audio tones. The Kantronics KPC3 is an example http://www.kantronics.com/kpc3+.htm These units plug into the speaker jack of the receiver and also to the RS232 serial port of your computer.

Or you could try to decode the audio tones with software and your sound card instead of buying the modem above. Check out these web sites for packet software:

http://www.qsl.net/soundcardpacket/
http://packetradio.com/rascalmkv.htm
http://www.elcom.gr/sv2agw/agwsc.htm

# 4545. IC-820H manual/help needed

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-19 10:01:09 UTC
From: "Odd Erling N. Eriksen" <odderi@pvv.org>
Message-ID: <cg1tp5$6b4$1@orkan.itea.ntnu.no>
Source record: 19997

Hi,

I am in need of a manual for an IC-820H, and as www.mods.dk is down,
rrae seemed like my best bet.

If anyone has a scanned/PDF version, I would be most grateful if you
mailed it to me, using the address above (odderi@pvv.org).

Specifically, I need to know:

a) What the jumpers on the bottom PCB is for (PACT/AMOD + MAAF/SAAF I
found out via google).

b) Pinout of the accessory jack.

c) How to make the PWR/COMP button set power level, not compressor.

d) Why the heck I get -20dBm power output when keying the rig (regardless
of band/mode). Do I need to have either a microphone or a modem connected
for the rig to enable its PA?

If anyone can help with at least part of the above, it would be most
appreciated.

Thanks,

--

Source record: 19806
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Hey guys, have some more stuff I'm not using for sale or trade:

Motorola Extender Boards mostly for MSR2000/MSF5000 I believe,
(Anyone know for sure, please let me know!)

One each

TLN5158A, pins to pin receptacles, bare.

TLN8799A, pins to pin receptacles, bare.

TLN5935A, pins to pin receptacles, plastic shrouds.

TLN5306A, card contacts to card slot, "Centracom II" written in marker on
it.

TAKE ALL OR NONE PLEASE!

******

DOUG HALL extender board, DHE-A-EXT, card contacts to card slot, appears
unused.
******

Able2 undercover siren. Model sticker is damaged, I only read xx-109. Its a
small brown box with front "shelf" where a 12-pin molex, 15A fuse and two
transistors reside. Older model I assume. Great shape, untested but presumed
working. Has some double-sided tape leftovers.
******

Motorola: 3ea., front upper plates for standard issue (double paddle)
L-shaped desk mics. If you've stripped yours out, these will cure your ills.
******

Federal Signal, siren control box, new, out of box. SmartSirenSM, 17
soft-touch buttons and a 3-position pursuit switch in bottom left corner. RJ
connector on right side. No labels on buttons.
******

NEC, two-tone voice pager, VHF, 155.490, not sure of tone reed freqs.
working great.
******

Icom ?2AT handie talkie. <HAM> 10ch, VHF with BP23 battery and universal
wall wart charger. I think it's a 2-watt with this battery, but will do 5w
on bigger pack. Works great with only a small blemish in far bottom rt.
corner of lcd that doesn't affect view. See reference:
http://www.rigpix.com/icom/icmikro2.htm

---Pix show no DTMF pad. This radio is taller with a DTMF pad.
******

For sale, trade <motorola, kenwood>..... Make an offer, if I like it, I'll
get back to ya!

I need:
1500mAh Battery for Kenwood TK350 <KNB12-A>
Charger for Kenwood TK350
Belt clip for Kenwood TK350
Ear transducer or throat mic for Kenwood TK350 or Motorola SP50
Or whatever...
thanks!

Date: 2004-08-20 21:08:38 UTC
From: kbozek@yahoo.com
Message-ID: <506a3e3b.0408201308.55330275@posting.google.com>
Source record: 19815

I have an ICOM 706 MKIIG. I know there is a DTMF mic yet I have the Heil mic that uses the RJ45 connector.

I saw a web page detailing how to connect a DTMF box to the rear of the radio via a radio shack DTMF generator. That generator does not seem to be available now. Has anyone built a box from something else. I was even thinking about an old phone...

Keith, N3HGN

Hello, i wonder if Kenwood AT-300 automatic remote antenna tuner is good or not.
Any experiences on it?

Thanks,
73 de Riccardo IK5WQO

What makes you think he reads any of these replies?

I would think it a reasonable compromise that auction postings be done
in a consistent way, so that others can choose to read, or choose not
to read them, using automated filters.

If that doesn't work, the newsgroup policy might have to be changed to
ban them completely. While the newsgroup might accept an occasional
For Sale or For Auction posting from a private individual, the
quantity from this poster would suggest a business enterprise.

<< If you have a spare on lying around you'd like to part
with, let me know! >>

Wby-

If you didn't already know, the same power cable is used with many Kenwood, Icom and Yaesu models.

Also, you may be able to find the connector shell and contacts, to make up your own cable. You can frequently find these parts at a hamfest.

As a point of interest, the TS-120S and TS-130S are the only ones I know of using that connector, that use all six pins. The last two pins provide a connection to the power switch in the radio, so it can be used to turn the dedicated AC power supply on and off. This feature was provided in the Kenwood PS-30, and the connector and cable were wired directly into the power supply. For use with a different power supply or with a car battery, those two pins would not be used.

<< I saw a web page detailing how to connect a DTMF box to the rear of the radio via a radio shack DTMF generator. That generator does not seem to be available now. Has anyone built a box from something else. I was even thinking about an old phone.. >>

Keith-

The touchtone pad in an old telephone has numerous wires connecting into the guts of the phone. Perhaps an old ARRL handbook or FM & Repeaters Handbook would have information about how to hook one up, but there may be a simpler way.

Just connect the two leads out of the phone through a series resistor (maybe 620 Ohms?), to a DC power source. The phone company used 48 volt batteries, but it will probably work with as little as a 9 volt transistor battery.

Connect a series capacitor from the junction of the resistor and the phone, to a potentiometer, and the output of the potentiometer to your audio input.

When the phone is on-hook, the phone line is disconnected, so you might want to bypass the hook switch. When off-hook, the phone's earphone and microphone are connected, so you may want to disconnect them.

Good luck!

Fine.

This is not a buy and sell newsgroup, and it's never been one.
It's intended for discussion of amateur radio equipment.

ONce again, the issue isn't auction ads, the issue is that people
post ads here. Once Joe Blow decides to sell his rig here, and
that happened a long time ago, then it gives permission to the idiots
who post multiple ads to sell multiple things here. But note that it's
only a matter of quantity, the individual selling things is just as
off-topic here as the commercial posters.

I have asked many questions here on different radios on this newsgroup over the years. Even some "HELP" questions, one about a week ago. I only received ONE answer in all that time!

> 
> This is not a buy and sell newsgroup, and it's never been one.
> It's intended for discussion of amateur radio equipment.

# 4608. HUSTLER TRAP VERTICAL MANUAL

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-22 12:10:53 UTC
From: Stuart Cole <sacole@cableone.net>
Message-ID: <10ih3abagrnjm3c@corp.supernews.com>
Source record: 19860

Anyone out there have an assembly instruction sheet or the whole manual for the Hustler
series of trap verticals? I sure would like to get a copy if you could scan it for me.

Thanks

Stu N4LBZ

Here are a few items for sale. Prices do not include shipping. I will
ship overseas.

Heathkit Phone Patch.....$15 plus shipping
Looks good except for 2 holes drilled in the top. Unit is untested.
http://members.cox.net/radiostuff9/heathpatch.jpg
http://members.cox.net/radiostuff9/heathpatch2.jpg

RCA Type LM-1 Multimeter Plus Parts Unit.....$55 plus shipping
This is an unusual looking Bakelite cased VOM which is from the late
1940's and early 1950's. Measures volts from 3 to 1000 ac and dc volts,
1 mA to 1000 mA DC and resistance. This unit is in excellent condition.
Also included is a 2nd non-working unit. The non-working unit has a free
movement. I did open up the inside and it is clean with no evidence or
of abuse or arcing. It is missing the battery cover which is just a flat
piece of plastic.
http://members.cox.net/radiostuff9/rca_lm12.jpg
http://members.cox.net/radiostuff9/rca_lm13.jpg
http://members.cox.net/radiostuff9/rca_lm1.jpg

Vintage Westinghouse Portable DC Voltmeter.....$35 plus
shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are
changed by making the appropriate connections to the meter. The ranges
are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
The instruction card on the inside cover has a date of 1942.
http://members.cox.net/radiostuff9/west_meter2.jpg
http://members.cox.net/radiostuff9/west_meter.jpg

Unknown Microphone #1.....$30 plus shipping
Neat Brushed aluminum housing. Manufacturer is unknown. Needs a new
cartridge which you can probably get from Radio Shack to work.
http://members.cox.net/radiostuff9/weirdmike.jpg

Unknown Microphone #2.....$25 plus shipping
Manufacturer is unknown. This does work and was hooked to a Ranger I
when I got it.
http://members.cox.net/radiostuff9//odd_mike3.jpg

Eimac 450TH/VT-108 Transmitting Tube.....$40 plus shipping
I have checked filament continuity which is good but have no way to test
beyond that. The tube is in excellent condition and appears to be NOS.
http://members.cox.net/radiostuff9/450th.jpg
http://members.cox.net/radiostuff9/450th2.jpg
http://members.cox.net/radiostuff9/e450th.jpg

Eimac 25T Power Triode Transmitting Tube.....$20 plus shipping
I did check the filament for continuity and it is OK. No other way to
test.
http://members.cox.net/radiostuff9/eimac25t.jpg

Eico High Voltage Probe.....$20 plus shipping
http://members.cox.net/radiostuff9/eico_hvprobe.jpg

Books
1995 ARRL Handbook.....$10 plus shipping
http://members.cox.net/radiostuff9/1995arrlhandbook.jpg

ARRL - The Mobile Manual 1962 Edition .....$8
http://members.cox.net/radiostuff9/mobilebook.jpg

ARRL - FM and Repeaters 1972 Edition.....$6
http://members.cox.net/radiostuff9/fmbook.jpg

Fifty Years of ARRL - 1965 Edition.....$12
http://members.cox.net/radiostuff9/fiftyyearsarrl.jpg

Ham Radio Horizons Magazine - First Issue.....$10 plus shipping
This is the first issue of Ham Radio Horizons magazine which premiered
in March of 1977. This was a spin-off of Ham radio magazine by Jim Fisk
designed targeting beginning and new hams. This issue is in excellent
condition inside and still has the mailing cover over it. This mailing
cover is a duplicate of the front cover. The back side has a handwritten
address along with 26 cents in US postage.
http://members.cox.net/radiostuff9/hr_horizons.jpg

Thanks for looking.

# 4612. FS: Icom RP-2210 repeater with 4 cavity duplexer

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-22 17:39:19 UTC
From: timw@dilyns.com
Message-ID: <SdqdnYrZJKnaR7XcRVn-iw@ctc.net>
Source record: 19864

The Rockingham County Amateur Radio Club is offering their complete 220Mhz Repeater up for sale. This is a complete repeater system that includes repeater with built in 120vac power supply, Controller, and 4 cavity Duplexers. Connect your antenna(s) and it is on the air! Repeater has recently been checked and tuned. Duplexers also just retuned and checked out. Currently on 224.780Mhz.
This is a fully functional Repeater and was just taken out of service on August 21, 2004 for the posting for sale. We are only selling this system due to lack of use and the Club has other projects that is in the works. This will be sold as a complete setup and will not be parted out. Also included in the sale will be a ACC FC-900 Interface Unit, Icom UX-29H 144Mhz Band Unit, and Icom UX-49A 440Mhz Band Unit. Note: we are selling the Interface, 144Mhz, and 440Mhz units as condition unknown due to they have not been used in about 3 years. They were last used on this repeater when we run a RC-85 Controller but switched to a NHRC-4 Controller and the Links were never configured back in.
This is being offered as a complete package only. Price for the complete listed system is $1800.00 plus actual packing, shipping, and insurance. Payment may be made to the Rockingham County Amateur Radio Club Inc. We will accept Cash, US Postal Money Orders, and Checks. Checks will delay shipping of the system till the check has cleared our bank. Local pick up is welcome to avoid shipping. May be able to deliver this system to the Shelby, NC Hamfeston September 4 & 5, 2004.
More information and equipment details at
http://www.rcarc.com/220sale.html or email Tim at wd4gxd@rcarc.com.

# 4613. FA: JRL-2000F 1KW SOLID STATE HF LINEAR AMPLIFIER

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-22 17:41:31 UTC
From: acannell@wwc.com
Message-ID: <51ca721c.0408220941.7d248acd@posting.google.com>
Source record: 19865

ebay:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5716596708

my email is asa@NOSPAMNOSPAMwwc.NOSPAMcom

JRL-2000F 1KW SOLID STATE HF LINEAR AMPLIFIER

Manufacturer: JRC (Japan Radio Co., Ltd.)
Model: JRL-2000F

Operating freq. range **SEE NOTE**: 1.8, 3.5, 7, 10, 14, 18 & 21 MHz
(24 & 28MHz ant. tuner only)

NOTE: The "General Coverage Mod" has been performed. However,
I am not sure what bands this gives access to. The mod involved
removing resistors 3 and 4 on the control board.

Rated Output Power*:
SSB 1KW PEP, 100% duty cycle, 24 hour
CW 1KW 100% duty cycle, 24 hour
FSK/SSTV 1KW, 100% duty cycle, 1/4 hour
*at 220VAC

Output impedance: 50 ohm unbalanced, VSWR 3.0 (16.7 to 150 ohm)
Harmonics: -60dB or less
IMD: -35dB or less below PEP (at 1kW output)
Input impedance: 50 ohm unbalanced
Exciting power: 100W max.
Frequency switching time: 0.1 second
Power supply voltage: 85 to 264V AC, single phase
Power consumption: 2.5KVA or less (at 1KW output)
Input power factor: 95% or more (at 1KW output)
Temperature range: -10 to 40 C

Protection circuits: PA excess current, PA overheat, PA abnormal load
AC power supply excess voltage, power supply overheat, PA failure,
excessive antenna VSWR, exciting power excess, antenna matching
anomaly

Dimensions: 430 x 300 x 402 mm

Weight: 28kg

48 power mosfets
SEPP-type low distortion power amplifier
fully automatic antenna tuner
four antenna automatic antenna selector

automatic frequency counter system
high efficiency power supply with internal power factor corrector

Cosmetic condition: Very good. This unit has seen very little use. The paint is
flawless overall with a few isolated scratches. The owners manual has the word 'COBBE'
written in large black letters on the front cover.

I have powered the unit up and gotten more than 500W output power into a dummy load, I did not have a higher power dummy load so I could not test
it at higher powers. I have inherited this unit from my grandfather. I know it was
working perfectly when he used it, and he barely ever used it. This unit has
spent 99% of its time in a box.

The units power cord is about 5 feet long with a temporary three prong plug on the
end for testing. It had been wired directly to the AC mains. You should attach a
more permanent plug or wire it to the mains.

ALSO INCLUDED:

Remote control
Operating manual
Two copies of the service manual

WARRANTY:
3 days with full refund minus shipping costs (both ways) and
ebay/paypal fees.
This unit appears to work perfectly but I do not have the ability to fully test it.

RETURNS:
Absolutely no returns unless the unit fails to work within 3 days after delivery.

SHIPPING:
Shipment by FEDEX or UPS only.
Buyer pays actual shipping and packing costs.
Unit will be packed professionally in double boxes.
Shipment must be insured for the selling price of the unit or $3000, whichever is higher.
This unit is heavy and may be very expensive to ship internationally.

# 4615. Heathkit SW-717 receiver

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-22 19:46:20 UTC
From: Engineer <notme@nowhere.com>
Message-ID: <dK6Wc.1571$H23.17542@newscontent-01.sprint.ca>
Source record: 19867

Hi, everyone,
I picked up a (low end) Heathkit short wave transistorized radio, model SW-717, "series no" 08731, at a garage sale this W/E - not working well, some reception on BC bands but low sensitivity. I put a few low level sig. gen. RF signals on the antenna terminal, from 1 MHz to about 12 MHz but reception spotty and not to dial scale.

My guess is that it is 1970's vintage, perhaps a bit before. It has 9 transistors (2 power types); no integrated circuits; cannot find any IFT's (very odd!) but there are a total of 7 unshielded coils on the PCB. It has a 2 gang tuning capacitor with one gang of lower capacitance than the other with 10 plates vs. 11, about 390/500 pF in size - suggests an oscillator to me, i.e. not a TRF set.

I've not yet done a full forensics yet in case I can save time by looking at the schematic. Will pay for copying and mailing costs for a manual, or the original, or would appreciate even just a scan of schematic by email to:
'surfnews "at" sprint "dot" ca' suitably written, of course..

All info on this model will be greatly appreciated. Many thanks for all replies,

Cheers,

Roger

Hi all, I picked up a Bencher Iambic paddle. It was not wired for any
keyer.
Question, what is the correct way to wire it up??
Does the dit belong on the left paddle or the right??
Is there a correct way??

Don't bother with that old technology. If it's the gold plated one
I'll offer ten bucks<:-))

Normally they are wired so your thumb sends the dits.
wire accordingly for right or left handed operation.

I picked one up at a swapfest and found it was backward (dits on the
right) or wired for a lefty so I just swapped the wires on the bottom.

Usually, configure so your thumb sends the dits, wire accordingly for right
or left handed operation. Some folks connect it in reverse and it is really
a personal preference, but you may be in for a surprise if you operate some
else's station. If you do encounter a "backwards" paddle, a quick fix that
works on some paddles is to turn them upside down! I did this at our last
Field Day rather than rewire temporally, however a lefty was right at home
with it rightside up (;-)

Dit on the Left side (same side a "BUG" uses- those mechanically
generate dits, with a pendulium), but then mine is backwards--
learned on a buddies key , was left-handed! When in doubt, simple
mod is double pole, double throw - glue under side of key, "X" strap the
far sides , and wire to key- wire the center to rig- as a reverser
switch- then anyone can use it even if trained on a backwards setup!

It does not really mater. It is usually the dits on the left paddle if you
are right handed. REason being that is the way the mechanical bugs are
wired. The thumb is able to hit the paddle harder to make the mechanical
bud do the dits. With no hard hitting needed for the electronic bug it will
not mater but most will learn dits with the thumb.

One of my lecturers (and I'm sure she wasn't first) said: "The difference
between plagiarism and research is the length of the attributions."
(Now that I've said that, I can say it next time as "Like I've said
before....")

Look at the vibroplex page at URL:
http://www.la.ca.us/frandy/

sez:
The Vibroplex was based on a lever that rotated around a vertical pivot.
Pushing a paddle mounted on one end of the lever to the right and holding it
there caused a spring-mounted contact on the other end of the lever to
vibrate against a stationary contact, making strings of dots.

Dashes were made manually by pushing the lever to the left and releasing it.
--
One Watt

To steal ideas from one person is plagiarism;
to steal from many is research.

Dits on the thumb side, so left side should be sending dits if your
right handed.

Mine is wired for right handed CW operating, but I also have a MFJ
Memory Keyer that has a button on it that will reverse the keys for
left handed CW operators.

It's probably all garbage anyway, as is most ham equipment on ebay!

Is it garbage to find an item that you need? Is it garbage to find an item from your youth? Is it garbage to find an item that you always wanted from your youth but you could not afford? Is it garbage to find a hard to find item? Yes, some items on ebay are garbage but where else can you go to get what you want, need from around the world?? You should really grow up and look at the big picture. You can get screwed at hamfests just as easily. I have been burned at hamfests here and there over the last 25 years. I have won many of auctions on ebay since 1996. NEVER have I been cheated or stiffed on a ham item! My last "big" item I won on ebay was a Yaesu FT-847. I won it last year for the price of $790.00. It works like a champ and looks like BRAND NEW!!! Never a problem.
So don't you be so cynical (sin-ecch-al, just for you). Wake up and smell the coffee. Ebay is here to stay.

Well I built it and it seems work exactly like I want expect for one thing. Please excuse the terminology error here, but I'm going to refer to the part of the lm317 that you attach to a heat sink as the "top". I built my transmitter inside an ammo can with a BNC-BNC bulkhead connecter on the top of the can so I'm have an external antenna. I also figured that the ammo can would be perfect to affix the lm317 to for heat distribution. You may already see the problem. Basically when I installed bulk head BNC connecter to the ammo can it grounded the entire ammo can. The problem is, the "top" of the lm317 that you attach the heat sink to has positive voltage on it. Its the same voltage as the output pin on the lm317. Is this normal? So when I connected the lm317 to the ammo can(not knowing the problem) its created a short and the lm317 really really hot. I just assumed that the "top" of the lm317 would work if it was grounded, but l was wrong. Am I missing something or is this normal. As long as I either unhook the lm317 or the bulkhead BNC connector from the can everything works great. Any comments.

That's correct, the "top" or "tab" of the lm-317 is connected to output voltage.
Here's a link to a data sheet: http://www.national.com/pf/LM/LM317.html

The Metal Tab is NOT "GROUND".... You're supposed to use an insulator
between the tab and the metal case. Yes, you DID - short it out.
Use an Insulator and Heat Sink Grease........ Try it again doing it the
right way, you'll have better luck. Just so you know, the TAB is the
COLLECTOR.
If you had the package there it came from, it would probably tell you that.
Sometimes, the package tells how to mount it also.

Yes, this is normal for an LM317 in a TO-220 package. The heatsink
tab is connected, internally, to the Vout pin.

> So when I connected the lm317
>to the ammo can(not knowing the problem) its created a short and the
>lm317 really really hot.

Yup. The LM317 will have put itself into its internal
current-limiting mode, and might eventually go into thermal-limit as
well.

You're fortunate that the LM317 has such a self-protection circuit.
If you were using a regulator with a separate, external pass
transistor, and hadn't included current-limiting safe-operating-
area protection components, the pass transistor would probably have
blown out in a fraction of a second.

> I just assumed that the "top" of the lm317
>would work if it was grounded, but l was wrong. Am I missing something
>or is this normal. As long as I either unhook the lm317 or the bulkhead
>BNC connector from the can everything works great. Any comments.

Un-ground it. You can either use a separate heat-sink (one of the
little finned types would be best) which is isolated from ground, or
you can mount the LM317 to the ammo can using components which
transmit heat, but not electricity. A nylon screw, and a washer with
a raised inner rim are often used for the mounting; the electrical
insulation can be provided using a thin "Sil-pad" silicone pad, or the
traditional "thin mica insulator, with a very very thin coating of
silicone heat-sink grease on either side" arrangement.

I noticed ALF Enterprises is selling the Yo-Yo-Tenna line of portable dipole antennas recently featured in QST, Worldradio, CQ, etc. at a little bit cheaper price and cheaper s&h than noted at the mfg's website. Being that most of us hams are frugal, I'd thought I'd spread the word. Here is that long webpage URL:

As the others have said, you need to have an insulator between the case of
the LM317 and the box. See:
http://eportal.apexmicrotech.com/mainsite/pdf/accessor.pdf
to see what the different washers, heatsinks and other accessories actually

look like and a few explanatory notes.

Cheers.

Ken

Incidentally, the bits you need are probably down at RadioShack (maybe even an application note showing how to do it), or certainly at any decent electronics shop.

Ken

You need to insulate the heat sink tab of the LM317 from ground. Your
local electronics hobby store such as Radio Shack, should carry them.
Also be sure to get some heat sink compound. You will need to apply a
small amount between the heat sink tab of the LM317 and the insulating
material, and between the insulating material and ground.

I'm offering a complete PRC-77 radio set in excellent, fully
operational condition. The radio itself near-mint. It's been
aligned and checked and is guaranteed functional. I've included
the best of the accessories I have with this radio.

1 ea. PRC-77 R/T unit, almost new-appearing, guaranteed functional
1 ea. ST-138 carrier/straps, unused/unissued
1 ea. CW-503/PRC-25 carry bag, unused/unissued appearing
1 ea. AT-892/PRC-25 short whip (gooseneck plus tape section),
excellent
1 ea. H-250 handset, used excellent
1 ea. AT-271 sectionalized long whip, used excellent (getting tougher
to find)
1 ea. AB-591/PRC rubber base for long whip, used very good condx
1 ea. Battery, BA-5598, lithium primary (for a little instant
gratification)

Hi,

I just finished to review shortly my 37th propagation software.
You will find all reviews accompanied with screen dumps (and links to
in-depth reviews too) at
http://www.astrosurf.com/lombry/qsl-review-propagation-software.htm
More to come.

Due to the number of reviews, very soon the document will be split and the
layout improved as well.

GOT BUGS?

{ YOU KNOW- THE KIND THAT HEAR AND SEE EVERYTHING YOU DO}

We find them fast and dispatch the little buggers super fast. We employ government level Spectrum Analyzers. We sweep to 22-GHZ and above if necessary. We use real TDR's (Time Domain Reflectometers) to sweep your phone lines. We also sweep limos and private jets, cars... And of course, we offer complete computer forensics to sweep your computer for the insidious SPYWARE which records your every email, keystroke, picture, instant message, virtually everything on your computer and summarily sends it back secretly to its waiting master. SPYWARE is so sneaky that it can and will change directories to avoid being discovered. We will find and execute the slimy little buggers and install a program on your computer to keep them out for good. We're pros with the right equipment to do the job right the first time. You won't find any SPY STORE toys here. No little mysterious black boxes with long antennas and a guy running around chasing mysterious signals in the air. We utilize SPECTRUM ANALYZERS which you could expect to pay $30,000 to $50,000 for a lab grade unit. The same applies to our TDR's- all pro equipment, period. Ask about our SPECIAL- $99.00 SWEEP for RF bugs and COVERT MICRO VIDEO CAMERAS. UP TO THREE ROOMS, Los Angeles area only. Email SurveillanceInc@aol.com

# 4677. Re: Texas Balloon Launch Team (BLT) to fly ham radio and GPS this saturday 10am

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-28 00:25:34 UTC
From: Craig Davidson <nospam@earthlink.com>
Message-ID: <2iQXc.464$8d1.336@newsread2.news.pas.earthlink.net>
Source record: 19779
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.amateur.space,rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.digital.misc

The balloon was successfully launched last Saturday. It reached 83,000 feet over Texas before the balloon burst and the electronics payload parachuted back to earth. Amateur radio operators were heard talking through the cross band repeater from Galveston, Houston, Dallas, Austin, and Rio Grande. Recovery was as simple as entering the last broadcast GPS coordinates as a waypoint into a hand held GPS receiver and following the arrow to the landing site. Conveniently the package landed only a few hundred feet from a paved road.

Watch for future balloon launch announcements at:

Here are the photos from BLT-20

http://www.qsl.net/w5acm/b204821b.html

Hi folks

I plan to use two Yuasa NPO.8-12 12v 0.8Ah gelcells for portable radio amateur rig..

I will use them in France where power is 50 Hz. I see that chargers available here in Canada always specify 60 Hz.

So, do I have to expect some problems?

Thanks

Pierre

Hello Everyone,

First I would like to say thank you to those of you that read my original post and visited my new web site. I also appreciate all the feedback and comments that I received.

Based on that feedback, and since my web site is still new, I have decided to allow members to post a free photo ad. You can use this free ad to advertise your radio gear for sale, post a want ad, or even advertise your eBay auction item.

While you're checking out my new web site, please be sure to sign up for the free door prize drawing. The first door prize drawing will be held in October and one lucky registered member will win either a new ham or CB radio.

To learn more about how to get a free photo ad and to read the rules for the free door prize drawing, please visit http://www.onlinehamfest.com .

Please also tell a friend about my new web site or add a link to your web page. I could really use everyone's help in getting my new web site off to a good start. :)

Tnx es 73
Dave, Zed Zed

HF Linear Amplifier 80-10 meters single Eimac 4-400 with
separate RF Deck and Power Supply.
Nicely built the RF Deck looks like a Henry.

Output is adjustable with a simple change in value of a grid resistor.
Spare Eimac 4-400 NOS - tested however no hours,
both tubes in great shape.
Prefer pick up - the powersupply is heavy. $275

Better find a charger that works on both because on 50 cps you need more
iron in conventional charger but a switcher will probably be OK since the
first thing it'll do is conver the ac to dc.

He didn't mention how fast he wanted to charge the batteries. Many older camcorder chargers were 12 volt and have universal inputs. Would be easy to modify and most thrift stores have them.

Does anyone have any information on the SOTA 1296 Linear Transverter.

Specifications, connections, circuit diagram or a manual would all be useful.

In particular the unit has a 5 pin DIN socket, for control, which appears to have slightly unusual connections.

# 4707. RF ALC problem - theory help needed!

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-30 00:07:12 UTC
From: ablight@alphalink.com.au
Message-ID: <1fc7b362.0408291607.7e60507c@posting.google.com>
Source record: 19709
Cross-posted to: sci.electronics.design,rec.radio.amateur.equipment

Hi Folks,
consider this situation:-

I have a problem with 2 HF transmitters, both misbehaving in the same manner.

On all HF bands (from 3.5 to 28Mhz) bands, the alc meter shows drive variable by mic gain control - this is set up by watching meter deflection on voice peaks as per instruction manual. In CW mode, power output is max 100 watts each band.

The EXCEPTION is 80m, where
1.ALC does not register on meter irrespective of voice drive/mic gain setting.
2.Power output is 180 watts in CW mode.

Something is wrong - I have checked drive level to RF power amp section with my CRO, same level all bands. I have checked the LPF on the PA output, the switching relays work OK and every component has been removed from the board and checked - the caps have, the toroidal coils were examined for burning/shorted turns/continuity, but not inductance measured.

Can you suggest what has gone wrong - I am running out of ideas and knowledge!
My limited theory states that a portion of the RF output is sampled and fed back to the exciter stage to reduce gain and thus prevent overdriving and splatter. This ALC detector circuit is common to all bands, so its unlikely to be faulty. All test results were on a 50R dummy load, so antenna variations have been eliminated.

Thanking you,

Andrew Blight VK3BFA

# 4708. FS - I found some large neon bulbs NOS for very old tube testers, radios, etc.

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-30 11:46:40 UTC

I have located some large neon bulbs, the ones that were in very early tube testers, they are about the size of a refrigerator light bulb, I found both bayonet mount and also screw in type. They are GE new old stock.

here are the specs on the bayonet mount ones

type NE-36
GE brand
105-125V
base: BA15d - Double Contact Candelabra Bayonet
2 Watt
External Resistance 3500 ohms

here is a data sheet I found with some measurements which appear to be correct
http://www.donsbulbs.com/cgi-bin/r/b.pl/ne-36.html

here are the specs for the very similar looking candelabra base (screw in ones)

type NE or also known as NE-34
GE brand
105-125V
base: E26 - Edison Medium Screw (like a standard light bulb)
2 Watt

here is a data sheet I found with some measurements which appear to be correct
http://www.donsbulbs.com/cgi-bin/r/b.pl/ne-34.html

I also have a lot of other neon bulbs such as NE-16, NE-30, NE-48, NE-51 etc.if anyone would like to buy any before I put them on ebay
also will trade for NOS GE NE-45 neon bulbs

if you are interested, email me at cacheoverflow@yahoo.com

cheers!

wild bill

## 4709. The exciting world of APRS

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-30 12:14:56 UTC
From: hxc98@yahoo.com
Message-ID: <aa8577c5.0408300414.21ab06d7@posting.google.com>
Source record: 19711

Start learning about the exciting world of APRS with APRSPoint, the APRS software regarded by most hams as having the best map support and most intuitive user interface. Track other hams on a zoomable, street-level detail map in an intuitive and easy to use interface. Send instant short messages through either RF or internet link. If you are an experienced APRS user, you'll appreciate the ability to plot a digipeater or other ham stations' signal range on the map, connect to APRS internet servers, send email through your ham radio, and other advanced features. This week you can get APRSPoint with MapPoint 2004 included for the best possible price ever. Check out the website at http://www.aprspoint.com/ for details.

> Andrew Blight VK3BFA

I believe your theory is correct, but await further detail from the net...

Here's a thought. Because the problem is on the lower frequency band,
perhaps there is a bypass capacitor failure somewhere allowing RF to go
where it shouldn't. Without seeing the circuit I can't suggest more. From
your description above, I'm not sure if you checked cap VALUES or just
looked for burning. Also if there is a choke for blocking RF a short would

also let RF through.

# 4712. WANTED: Info on VHF Portable

Newsgroup: rec.radio.amateur.equipment
Date: 2004-08-30 20:45:49 UTC
From: Norm VE3CZI <ve3czi@arrl.net>
Message-ID: <8oMYc.12950$0c.3266@read1.cgocable.net>
Source record: 19714
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.swap

Recently obtained a VHF Portable Radio that has NO information as to
Manufacturer or Model of Unit.
From info already in the unit, I know it is:
VHF Wide Spaced / 1W & 5W / 15 Channels / CSQ / Has a battery marked as
B-706 / Has a sticker on side marked KH142UH / PC Boards inside are marked
KOMBIX PC-181 & PC-177.
I have listed a link to a picture of this unit below.

Any assistance with this unit's Identification, Manuals etc... would be
appreciated...then I have to find a Programmer ! !
Tnx & 73....Norm VE3CZI
http://home.cogeco.ca/~rodemi/Images%20%5bMISC%5d/KH142UH%20VHF%20Portable.jpg

Lots of them on Yahoo groups -- for example:
http://groups.yahoo.com/group/Kenwood/

Covers An open forum of discussion concerning Kenwood Amateur Radios with an emphasis on VHF/UHF operations. Some of my favorites are the :TM-V7A, TH-F6A, and the TM-G707.

But there are several more like
http://groups.yahoo.com/group/Kenwood_Ham_Radio/

Here are some older ones -- don't know if they are still active

Subject: [karc-l] Website Question (fwd)
Date: Fri, 27 Aug 2004 08:10:52 -1000
From: Arthur
To: karc-l@karc.us

I'm posting this on behalf of Richard Detweiler, K5SF.

If any of you run across his Icom 208H rig, please let him
know. It was stolen from his car while on vacation here.

Also if someone could post this to the Ham Radio Hawaii
yahoo group that would be cool.

Mahalo!

------------ Forwarded Message ------------
Date: Thursday, August 26, 2004 9:03 PM -0500
From: Richard

Hi,

My name is Richard, K5SF.

I received your e-mail address from Jack, KH6DQ, He suggested I contact
you two.

I was operating in Honolulu on 2M FM on my trip to Hawaii, On the 3rd day,
someone broke into the trunk of my car and took a ICOM 208H S/N 0502905.

Wanted to know if you had a place to post the info so local hams in Hawaii could look out for it,

I know it probably won't show up, but you never know...

Thanks and Best of 73's

Rich
K5SF

# 4734. New ham wants advice on a good 2m/440 HT for a first radio

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-01 02:56:51 UTC
From: Andy Entrekin <entrekin@iname.com>
Message-ID: <TTaZc.94588$Fg5.26081@attbi_s53>
Source record: 19736
Cross-posted to: rec.ham-radio,alt.radio.amateur,alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,rec.radio.amateur.swap

I passed my Element 2 exam last week and am eagerly awaiting the posting of my Tech ticket on the FCC site. In the meantime, I have been doing research on radios. I have considered as many factors as I know of, including TX power, physical size, and portability. My needs have led me to look for a good handheld unit. Before anyone chimes in with a recommendation to go for a mobile, let me say that being able to carry the radio with me wherever I go is a must, which rules out mobiles.

I am looking for opinions about HTs that cover the 2meter and 70cm bands and have at least 5 watts output. I value the opinions and experiences of other hams, so I figured that these newsgroups would be a good place to solicit them.

Please either post your opinions here, or feel free to email me at "entrekin-at-iname-dot-com" with the appropriate symbols (low-tech anti-spam measure). I look forward to getting lots of input!

Thanks,
Andy Entrekin
Bedford TX USA

For any of you who frown on cross-posting:
Sorry for the cross-posting, but I wanted to get as many responses as possible. If I hadn't cross-posted, I would have just copied this same message in to each post to a single group. This just seemed smarter.

I haven't bought a new dual-bander recently, but I love my Yaesu FT-530. It
has been
bullet-proof. I have dropped it, overheated it (both internally and with
sunshine on a
car seat) and it keeps coming back for more.

Based on my experience, you should have
-- a radio with external 12V power input
-- a radio has a detachable antenna (BNC mount probably best)
-- an external speaker/mike for your radio (I think they all accept
one.)
-- a repeater directory for your area (or find one on the Internet)
-- at least one outside antenna cabled into a favored operating location
(2M j-pole also works on 440)
-- a holder for your HT that props it up on a desktop or bench
-- an accessory battery for long-term worry-free portable operation
(Gel-cells are good.)

5 watts on VHF/UHF will generally take you out to the radio horizon, or to a
high-level repeater even with a
rubber duck antenna. The outside antenna will help you QSO with low power
stations or somebody with a bad antenna.

Welcome to the amateur ranks.

I like my Kenwood TH-D7a, which gives me essentially two radios in one (as opposed to a single radio that can be on one of two bands) plus APRS and packet capability.

Congratulations on your ticket!!!!!!!!!!
I agree, the FT-530 is a GREAT radio!! Also, check out the Alinco DJ-580T.
Almost the same and built like a tank also! These are older radios and a bit
larger.
This is not a bad thing! They usually have louder speaker audio than the tiny
HT's of today, although the Alinco DJ-580T has the edge on speaker audio. . One
more favorite on mine is the Yaesu FT-50R. It is smaller than the other 2 and
works great with LOUD speaker audio. This is a dual band radio but one band at a
time. The best part of all, these radios can be gotten at a good price that
won't kill you!!

Well, a bit more information. One is a Yaeusu FT707, the other is a
Yaesu FT747. What is common to both is they have been hacked around to
get them on the 27Mhz CB bands - they both use similar solid state PA
modules. Possibly the CB stuff is a red herring - but there is always
the nagging thought that someone has used the "golden screwdriver" to
do something radical on them. No documentation, of course.

So far have fixed 9 separate faults on the 747, only 2 of them
legitimate "radio" faults (faulty switching diodes on the RF
attenuator, dry joints on the Xtal filter module) - the rest were the
result of "fiddling". The 707 was a bit more straight forward -
oxidised relays, replaced 1 and cleaned the others - plus a big
electro cap on the 12v DC input power line was literally blown like a
shotgun cartridge - very messy, but didnt seem to bother the radio
that much.....

Have checked the caps in the output LPF (both of them) by removing
from circuit, testing with a 500v megger for leakage, and measured
value with cap meter - all ok, within tolerance ie 5% of value (both
from the circuit, and printed on them) - would it be THAT critical for
this application? Havent measured the inductance of the coils - the
solder on them is untouched so they LOOK original, just examined for
burning/shorts/heat distortion.

I know that power output on the lower bands is greater than the higher bands for tube type PA - would the same apply for modern transistor devices - maybe a consensus from the group on this one.....Interestingly enough, the manual for the FT707 only states "Transmitter power 240w DC input" - no specific figures for each band!

The FT707 has had a 4.something MHz xtal fitted in the aux. position - ALC works fine on this frequency, but go to 3.5Mhz - nothing, although the internal power meter (using the same Bruen style coupler, just one side of it) works fine. My next step is to see if there is DC out from the coupler on 80M and see where it drops off or why it drops off.

Both are mechanical nightmares with very poor accessibility -the 707 because of tight wiring looms with plugs easily dislodged when trying to gain access to test points, the 747 because its in a nice plasticized box with no removable cover plate access to the boards - and in common with nearly every other piece of equipment I have ever worked on, the leads are deliberately designed (in both of them) to be just that half inch too short to allow partly dismantled access and so live testing.

Am trying to fix my spectrum analyser (dodgy connections on mating plugs/sockets) to see what they do on air.

And in response to an earlier question - yes, the 80M dummy load was reactive,(XL=30R at 3.5Mhz) so used a different one that wasnt - still the same results..... got to thinking, well, two things with the same fault, then perhaps the test gear itself is faulty ...it wasnt....

If the PA module was unstable due a crook bypass cap (or whatever) surely the LPF on the output would attenuate the RF watts out to a sane level - as I said, they both do about 180 watts output on 80m, and draw about 20 amps on TX - same figure for 100 watts out on the other bands, dropping off to about 60w on 10 metres. - going round in circles - is there a TX fault, or is it an ALC fault, or is it both!

Anyway - thanks, people, for ideas and comments, got my brain thinking about it in a new light from some of the suggestions...

It's interesting that your 707 was fiddled with by a CBer. I had a
friend about 20 years ago who made good beer money by "tweaking-up"
countless 707s by maxing-out the preset pot that controls that
circuit. AIR, they did seem to work quite happily with 180W out on 80M
without detriment to the lifetime of the PA., although it's true to
say that even the unmodified ones are pretty gutsy on the lower bands
(140W approx. on CW) I reckon your problem - such as it is - is mostly
the 'golden screwdriver' adjustment and partly just the normal higher
output you get with a factory-spec rig.
I agree there's nothing worse than opening the lid and finding out
some joker has messed about with your radio, though. You won't know
what exactly the extent of his mods - or skills for that matter -
were. :-(

There are any number of good radios out there, a lot depends on personal
preferences.

But, the one thing I urge you is to invest a few more bucks on a
telescoping antenna. For less than 20 bucks, you'll double or more your
effective power, plus improve your reception, as compared to the rubber
duck that comes with most HT's.

Of course, the telescoping antenna will be a bit more bulky than the
duck, so that may or may not be a factor for you, depending on how you
intend yo use the radio.

Indeed.. The duck that comes with the Kenwood TH-D7a is by far the WORST
antenna I've ever seen.. A comet SMA whip tripled my range.

The other thing that's a big range booster, is a "tiger tail", which is
nothing more than a 19" wire and a lug to fit under the antenna connector..
This provides a counterpoise for the antenna, and acts as a crude dipole.

With a good antenna, you will find that the 5W setting is rarely needed, and
mostly just chews up batteries.

Don't blow all your cash on an HT. By all means get one, but save some dough for a nice starter rig like a Yaesu FT-857 or an 897. You'll get all-mode on a lot of bands for not a ton of cash.

Kudos on your ticket!

May be the sensitivity of the ALC detector is different at various frequencies in the 3.5 to 30 MHz range. This circuit usually uses a toroidal core transformer. May be they made a batch using the wrong core type. May be the transformer has nulls in sensitivity around this frequency. Or If your problem is at 3.5 MHz, may be is not designed optimally and could do with a few more turns. Not too many more or it may lose sensitivity at the 30 MHz end. Try to figure a way to check the ALC detector sensitivity over the frequency range.

>
> Thanks
>
> Pierre

Hello Pierre

50hz ou 60hz ne feras aucune diffďż˝rence au niveau de la charge.
Puisque que ce n'est pas de la puissance mais le cycle de phase
du courant dans les lignes d'alimentation.
Ce qui est important c'est la tension en entrďż˝ du chargeur!!!

- habituellement en France tu as une alimentation en 220V biphasďż˝
- ICI au Quebec on a une alimentation domestique en 120V monophasďż˝
et une alimentation de puissance pour les chauffages ou certain
appareils comme la secheuse a linge en 240V biphasďż˝

Alors avec un petit peu d'imagination, un tournevis et deux ou trois
morceaux tu peu brancher ton chargeur ICI sans risque pour tes batterie
juste surveille le chargeur pour qu'il ne chauffe pas trop. !!!!

# 4756. S-meter setup for Kenwood TS-50

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-02 16:00:12 UTC
From: eickrman@aztec.asu.edu
Message-ID: <ee6c448a.0409020800.5ec9f188@posting.google.com>
Source record: 19658

If you want to use the service menu to set the S-meter on a TS-50 (A5 for S1, A6 for S9, and A7 for full scale), what frequency is the receiver operating on?

I suppose I could just start sweeping around with a signal generator, but just wondered if anyone knows.

Curtis

# 4757. Re: New ham wants advice on a good 2m/440 HT for a first radio

> and have at least 5 watts output.

Well you did get many very good comments. I won't repeat any.

I have the TH-F6. I can't compare features, but what I think can be
important to you:
* You can get an AA battery pack for when your Li=Ions are dead in an
emergency, or you are too poor to afford new ones (Tx power lower however)

* I believe it has the widest general coverage available for a "dual
bander".= 100 KHz to 1,300 MHz. AM , FM, Wide FM, U/L SSB, CW. You name it
(except the CW beacons on 902 and 1296) and you can probably listen...TV,
CB, AM & FM broadcast, FRS, GMRS, Aircraft...wad-I-miss?

Fine tuning on HF down to (sort-of) 33 Hz.

* It does 222 - kinda rare. Lets keep the band alive!

* It is pricy, but it is around a very loose rule of thumb for cost of
'about' $100 per band.

* Better antennas are available. I have a 19 inch for mine, when needed.

5W, .5W, .05W on internal

5W, 2W, .5W on external 12 V sig lighter plug avail.

I forget the double A power, possibly 2W, .5W, .05W

The beeps are pretty "blind-friendly"

Disadvantages (to some - I'm ok with it)
* SMA Antenna connector.
* It doesn't receive FM below 29.7.
* Doesn't receive CW & SSB above 470MHz (See beacon comment above, but AM or
FM "works").

True for most HTs, and a very good idea.
I have AA packs for all my emergency gear, and I keep a stock of batteries
in the car which I rotate out into the kid's toys periodically.

> appears to have slightly unusual connections.

Hello Steve.

It's been many, many moons since we last met at one of the inaugral
CATS meetings back in my SWL days!

Anyhow, I recently sold one of those old SOTA 23cms transverters, but I
still have some documentation.

The DIN socket is wired as follows:-

1 +13.8Vdc power in
2 Ground
3 PTT (active low) in
4 Switched +12Vdc TX out
5 Switched +12Vdc RX out

Standard DIN pin numbering (clockwise from 9 o'clock) 1,4,2,5,3
The TX IF in is maximum 500mW and RF out is approx 500mW also.

A good suggestion - unlikely, as it would have shown up from new and
been known by now. However, will check the DC volts out of the alc
detector cct - possibly the glue used to hold it together has gone
funny and had some strange effect. Need to trace the wiring thru - in
the FT707 its a real pig due interlacing but will persist over the
next few days when I have time from more commercial (pay the utility
bills) jobs.

I'm offering a complete PRC-77 radio set in overall excellent, fully operational condition. The radio itself near-mint. It's been aligned and checked and is guaranteed functional. I've included the best of the accessories I have with this radio.

1 ea. PRC-77 R/T unit, almost new-appearing, guaranteed functional
1 ea. ST-138 carrier/straps, unused/unissued
1 ea. CW-503/PRC-25 carry bag, unused/unissued appearing
1 ea. AT-892/PRC-25 short whip (gooseneck plus tape section), excellent
1 ea. H-250 handset, used excellent
1 ea. AT-271 sectionalized long whip, used excellent (getting tougher to find)
1 ea. AB-591/PRC rubber base for long whip, used very good condx
1 ea. Battery, BA-5598, lithium primary (for a little instant gratification)

Andy,

Congrats! I have two I recommend, will give the drawbacks to both.
ICOM W32A, very good radio, short battery life transmitting on high power 2 hrs max 50 % cycle, 5-7 hrs listen on NiMh, direct battery charge from wall wart and will run off of wall wart has built in charge controller, excellent output, dual receive, weak audio, dual scan (memory and frequency), dual independent vfo's, direct frequency input, v-u, v-v, u-v, u-u, splits, cross-band repeat, weather, 100-999 M. receive except 220; easy to program can be programmed off a computer with cable and sw, 200 memories total split between U and V, onboard instructions, alpha numeric display, new around $250, haven't seen one used.
Kenwood TH-77A, a little harder to program than the ICOM (manual only to one memory bank), older model, dual band, dual receive, outstanding audio, dual scan (memory and frequency) v-u, u-v, u-u, v-v, I don't know if it will crossband, receive 130-500 (I think it can be extended but VFO's are tight, not as flexible as the ICOM), excellent battery life 12-14 hrs on MH PB-8 metal hydride batteries, only 40 memories, direct frequency input 2m drops first digit, will run off of wall wart (dc jack) but not charge battery (external only), outstanding front end and transmitter very solid, I have 2 of them both used for $100 each, no weather or air receive, not computer programmed, my knock arounds very rugged, one is my base, the other I carry every day around the yard, truck, etc.

Congrats on the new ticket! I just got mine Tuesday, so I was in the same spot last week. I settled on the Yaesu VX-5R, and got a Diamond SRH77CA antenna to go with it. I picked it because it hit the sweet spot on price/performance for me, and it seemed to get the best reviews on eHam.net. I love my Icom R71A, and was really looking for another Icom, but they all seemed to get picked on for pricey accessories and susceptability to intermod.

Seriously though, it looks like almost all the HTs in the $200-$300 range are pretty good, I've since had recommendations for the Icom W32A and the T90A. I think anything that can put out five watts on 2M will make you happy, all the rest is just flavor.

For sale an as new Yaesu G-5400B Satellite antenna rotator(s). These rotators provide 360 degrees azimuth and 180 degrees elevation for medium size unidirectional satellite antenna arrays. Included are two rotator units that can be bolted together or used seperately plus a dual metered and dual direction controller unit. Rotation torque is 44 feet pounds and breaking torque is 145 feet pounds. Also included is the original manual, clamps and bolts, etc.
No cables are included. This G-5400B was used only a few months. It works and looks like new. Price is $425 plus shipping from 79602.
Thanks, Charlie Hugg, K5MBX.

>
I went with the VX-7R which is a little more money, but worth it to
me. It has a good LI-ion battery that does well and runs a reasonable
power.

>Seriously though, it looks like almost all the HTs in the $200-$300 range
>are pretty good, I've since had recommendations for the Icom W32A and the

I think the W32A is one of the best duobanders put out. Good enough
that after it was discontinued there was still enough consumer demand
they brought it back and it's been back over a year. The W32 is
really from an earlier generation that is quite a bit larger than the
VX-5 or 7. For those of us who wear bifocals that is not all bad.

I happen to like the little Yaesu radios, although the VX5 and 7 are
not really Yaesu. They are listed with them and maybe built by them,
but the name plate lists a different name. Mine's in the car and I
don't remember the new name.

I have a complete set of the Diamond mobile antennas with both mag and
lip mounts. Well I did until my wife drove into the garage without
lowering one.

I use the large one on top of a 4-runner and have had it ever since
they hit the market. It has hit a few bridges and parking ramps
knocking the whole thing off the roof, but it still works fine on both
144 and 440. (That is one tough mag mount). I did break one though.

Here are a some items for sale. Prices do not include shipping. I will ship overseas.

Military Multimeter ME-260/U with RF Probe.....$85 plus shipping
Nice working military unit with RF probe. This appears to be the same probe as used with the Hewlett Packard HP 410 series of meters. Missing back cover.
http://members.cox.net/radiostuff9/mil_vtvm3.jpg
http://members.cox.net/radiostuff9/mil_vtvm4.jpg
http://members.cox.net/radiostuff9/mil_vtvm2.jpg

Hewlett Packard HP 400E AC Voltmeter.....$35 plus shipping
This is a tested and is a working unit. It does not include a power cord. It does include a copy of the manual on CD. I have several of these units
http://members.cox.net/radiostuff9/hp400e.jpg
http://members.cox.net/radiostuff9/hp400e2.jpg
http://members.cox.net/radiostuff9/hp400e3.jpg

RCA Type LM-1 Multimeter Plus Parts Unit.....$50 plus shipping
This is an unusual looking Bakelite cased VOM which is from the late 1940's and early 1950's. Measures volts from 3 to 1000 ac and dc volts, 1 mA to 1000 mA DC and resistance. This unit is in excellent condition. Also included is a 2nd non-working unit. The non-working unit has a free movement. I did open up the inside and it is clean with no evidence or of abuse or arcing. It is missing the battery cover which is just a flat piece of plastic.
http://members.cox.net/radiostuff9/rca_lm12.jpg
http://members.cox.net/radiostuff9/rca_lm13.jpg
http://members.cox.net/radiostuff9/rca_lm1.jpg

Vintage Westinghouse Portable DC Voltmeter.....$35 plus shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are changed by making the appropriate connections to the meter. The ranges are: 1, 5, 15 and 150 volts. This is a working unit in nice condition. The instruction card on the inside cover has a date of 1942.
http://members.cox.net/radiostuff9/west_meter2.jpg
http://members.cox.net/radiostuff9/west_meter.jpg

Unknown Microphone #1.....$30 plus shipping
Neat Brushed aluminum housing. Manufacturer is unknown. Needs a new cartridge which you can probably get from Radio Shack to work.

http://members.cox.net/radiostuff9/weirdmike.jpg

Unknown Microphone #2.....$25 plus shipping
Manufacturer is unknown. This does work and was hooked to a Ranger I
when I got it.
http://members.cox.net/radiostuff9/odd_mike3.jpg

Philips 4-65A tube with Ceramic Socket.....$40
Build something! I did check the filament for continuity and it is OK.
No other way to test. The beige sheet in the background makes the tube
appear burned which it is not!
http://members.cox.net/radiodx3/amp_465a.jpg
http://members.cox.net/radiodx3/amp_465asocket.jpg

Eimac 3C24 Power Triode Transmitting Tubes.....$15 each plus
shipping
I have two of these that are NOS tubes which are new in the box. I did
check the filaments for continuity
http://members.cox.net/radiostuff9/eimac3c243.jpg
http://members.cox.net/radiostuff9/eimac3c24.jpg

Eico High Voltage Probe.....$15 plus shipping
http://members.cox.net/radiostuff9/eico_hvprobe.jpg

National Type MCN Dial.....$20 plus shipping
Used but good condition with a clean dial face
http://members.cox.net/radiostuff9/natdial.jpg
http://members.cox.net/radiostuff9/natdial2.jpg

Books
1995 ARRL Handbook.....$10 plus shipping
http://members.cox.net/radiostuff9/1995arrlhandbook.jpg

ARRL - The Mobile Manual 1962 Edition .....$8
http://members.cox.net/radiostuff9/mobilebook.jpg

ARRL - FM and Repeaters 1972 Edition.....$6
http://members.cox.net/radiostuff9/fmbook.jpg

Fifty Years of ARRL - 1965 Edition.....$10
Neat book published in 1965 details the founding of an first fifty years
of the ARRL from 1914 to 1964. Lots of neat vintage photos.
http://members.cox.net/radiostuff9/fiftyyearsarrl.jpg

Ham Radio Horizons Magazine - First Issue.....$15 plus shipping
This is the first issue of Ham Radio Horizons magazine which premiered
in March of 1977. This was a spin-off of Ham radio magazine by Jim Fisk
designed targeting beginning and new hams. This issue is in excellent
condition inside and still has the mailing cover over it. This mailing
cover is a duplicate of the front cover. The back side has a handwritten
address along with 26 cents in US postage.
http://members.cox.net/radiostuff9/hr_horizons.jpg

Thanks for looking.

Hi

Just attempted to repair a 1987 vintage2m handheld. Replaced NiCads and they charge ..trouble is the PLL keeps unlocking. Replaced the lithium memory battery as well ... no change. This doesn't happen all the time ...set operates as normal for hours on end and then this happens (U shows on display) Good audio etc reported ... anybody any idea where to look for this fault???

Stumped!

Steve

I have a very nice condition Collins R-390A receiver made EAC. Unit has
been checked to verify operation is okay. Includes manual, $400.

Also have a Hammarlund SP-600JX (14) HF receiver that works great. Front
panel looks good except for a coupld of light smudges. Lettering is fine.
ALl original knobs. Includes manual, $300.

Stephen;
The most likely place to start is to adjust the VCO capacitor or coil so that the steering line voltage is within the correct range, usually 1.7 to 2.5 volts depending on the design and frequency of operation. If you can find a schematic, their should be notes regarding this adjustment. You might try tuning the radio from one end of the band to the other, if it relocks, say on the low end and not on the high end (or vice versa) you can pretty much count on it being a VCO adjustment. Bear in mind that as the radio ages, the tuning capacitor or other components can get contaminated especially if the VCO circuit is potted in paraffin as many are.

# 4802. FA: Matched Pair Burle 8122 NOS NIB

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-06 00:56:56 UTC
From: ebaysales@retrovox.com.au
Message-ID: <a66fa725.0409051656.76c11a05@posting.google.com>
Source record: 19554

See <http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=48710&item=5718730898>

Pair 8122 electron tubes made by Burle, USA. New Old Stock, never used, perfect condition military surplus stock. Both tubes have matching GREEN color code. Date code 97-43

Current production Burle 8122 list for US$415 each. For further info see Burle website <http://www.burle.com/cgi-local/shopper.cgi?key=8122&preadd=action>

Explanation of color code:

The 8122 tube manufactured by Burle Industries is measured so that the correct color code can be applied. With 700 vdc applied to the plate and 250 vdc applied to the screen, the control grid bias voltage is adjusted for a plate current of 185 ma. The following control grid bias voltage ranges determine the tubes color code based on the operating conditions above:

Control grid bias voltage color code

-8.0 to -10.9ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ red

-11.0 to -13.9ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½blue

-14.0 to -16.9ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½green

-17.0 to -19.0ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½black

The color coding scheme described above is only used with the model 8122 tubes manufactured by Burle Industries.

# 4803. NIST develops portable small atomic clock, could be good for freq standard

# 4809. FS - Kenwood VFO-120

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-06 15:15:37 UTC
From: Topaz305RK <navajomt@nemontel.net>
Message-ID: <A-OdnWUzTONg46HcRVn-qA@vnet-inc.com>
Source record: 19561

For Sale: Kenwood VFO-120 - $125.00, includes shipping (to continental US)

This unit is in great shape and includes interface cable. Works with Kenwood TS-120 and TS-130, and I believe the TS-520.

Reason for sale - no longer needed. Had it attached to a Kenwood TS-120S which
I upgraded to a TS-140S, my backup rig. An old friend had a radio failure and
wanted the TS-120S but had no need for the external VFO. I could not say no to
the guy so sold him the radio to get him back on the air. He does not work any
split and therefore did not have any need for the VFO. So - I have it up for sale.

I have had good experience with Icom over the years owning W2A, 3SAT, 901A, R10, and a 725. All of these radios have been great products. I wish they still made or would replace the concept of the 901A.

Recently I picked up the Kenwood TH-F6A. It is a great radio that consolidated three different radio I had previously. It is a 5 watt triband 144, 220, 440 with wide band receive. I have been impressed with the receive since I was not expected much but the audio is clear and loud and sensitive. The transmit is great too. I would recommend getting an after market antennae. I picked up the Diamond SRH320A improves the transmit. In my area there are many 220 machines making this a great one radio solution. It is impressive how well the radio performs given how small it is. Hopefully Kenwood's success will wake Icom and Yaesu up to the 220 market place in the USA.

Good luck on your decision. As you noted any of the major player make a good product and you will mostly be happy with any decision. I feel currently the Kenwood is offering the most band for the dollar.

Whatever HT you choose -- I'd recommend a couple of things.

Put up a decent outdoor antenna at home -- a j-pole or 1/4 wave
vertical at a good height. That will give your HT greatly expanded
range around the house.

Another thing, make sure your HT will run on an external 12-volt dc
power supply. Buy a small power supply, and at home, you'll be able to
use your HT for long periods of time without running the batteries
down -- and you'll have more signal output than you will with partly
discharged batteries. Save the internal batteries for when you're on
the go away from the house.

Hi;
I have a fully tested & Excellent Kenwood TS-440S with CW Filter & built-in
Auto tuner.,
Comes with copy of manual . Mike & DC Power cord never used.
Only blem is a bit of cloudyness behind the plastic but digits show fine.
I never attempted to try & clean the plastic.
Price is $420.00ppd

<< If you want to use the service menu to set the S-meter on a TS-50 (A5 for S1, A6 for S9, and A7 for full scale), what frequency is the receiver operating on? >>

Curtis-

I've had my TS-50 ever since they came out and didn't know you could do that! I did check it once, and found that the "standard" 6 dB per S-Unit was not observed. Each S-Unit was different.

I would assume the receiver would be operating at the frequency it was adjusted to prior to entering the service menu. Many times a service manual will recommend making adjustments of this sort at 14.000 MHz, but I think you are expected to set frequency with the tuning dial before starting the alignment.

When doing this, you need to put a load on the 5V output, or the 12 V
will not work well.

Various articles on the web for converting a PC power supply to a 12V
voltage source. It may have more ripple than is tolerable for a direct
circuit, no problem as a battery charger.

Happy trails,

not the best way to get the maximum life and longterm charge out of many SLAs, which is why many specialized chips and charging systems have been built, and articles available in QST and online.

I picked up a surplus UPS last weekend, with SLA specialty charger, 300 watt sine wave inverter, and battery in the case (for $3 - guys were tired of hefting them around ;-). Even if you had to pay $20 for a surplus unit at a computer recycling shop somewhere, you would still be ahead on the battery, SLA specialty charger, and 12 vdc to 110 AC sine wave inverter You just have to look at a used UPS for what it really is, subsystem wise!

One nice feature is you can route out the charging connections to other batteries, making it easy to use the setup in an emergency with other (larger) batteries. Last month's local sale (http://people.smu.edu/arc/sidewalk.html) turned up a 12v 33 amp (400 watt/hr) battery ($5 IIRC). We previously picked up some 12vdc SLA gel cells with 7.8 AH capacity, which are handy for handitalkies, QRP rigs, ATV video cameras, and the like (again, prices were in $3 to $5 range).

I'm now looking for some buys in used generators for our club (any hints? ;-) for field day. To my surprise, Sunday's paper had a 3.5 kw AC/DC OVH generator at Pep Boys for under $300, but I'd like something in the 1.5 Kw or less range for easier portability for field day and on-campus emergency power demos.

I have (2) VHF MCX1000 Radios. I need to make changes to the
frequencies. I have used a friends software but it is the wrong
version. In need RVN4011B.
I have RIB and cables, but not the correct version of the software.
Motorola has not responded to my license request to purchase the RSS
software. The Radio says that I need disk 1-0-3. So I don't know if
I need R02.00.02 or R01.00.03. If someone could help that would be
great. Trying to get at least one of these to use for ski patrol base
station. I even check with the local Moto dealer, but he does not
have the RSS for the MCX1000. Any assistance would be much
appreciated.

Thanks
-Chris-

# 4840. FS Yaesu G-5400B Rotators

A friend of mine sent me this.... I was wondering if someone here
could help him with this.... I will forward any replies.

Thanks
KG0IL

---

I am in China teaching English for 1 week now (will be here 1-2 years
- did I tell you I was going? in the same town as Mark and Rene
Strand - they helped me land the position) and the previous British
teacher residents left their old portable AM/FM/MW/SW 9-band radio
here. It appears to have shortwave capability and I'd like to play
around with it and see if I can tune in English-language radio (I can
get internet radio over my univeristy-supplied broadband Internet
access but wanted to try SW too). I searched the producton the web
and found it here
http://www.tecsun.b2s.com/new_product.html?pro=1&pid=17294
If you click on the pic you can get a closer up view.
Can you tell from the picture how I would operate it? There is an
owners manual but of course all in Chinese, and "that's Greek to me"
so far! I have never done shortwave before so all I'm doing is
flipping around the spin-dial randomly on the different bands 1-7 and
only get Chinese stuff. How would I try to get anything else? What
band and what number should I try to get something from America? Ans
is it possible with my 10-12 foot external antenna....>?
Thanks for any ideas you have!

I guess "SWR" meant short-wave radio, not the more familar
standing-wave ratio.

Can't tell much about the radio except that it seems to tune the
short-wave broadcasting bands. Look here for signals that he might
hear.

I've recent acquired 2 Motorola HT90's, model number under the battery is NHN6326A. They are ~455 Mhz with PL2Z.

Web searches have revealed almost nothing about his model. Any specs, pointers, etc. regarding this model would be most appreciated.

thanks, Zennon

It's not common knowledge, but there is indeed a service menu for the TS-50.
I also thought that when you go to the S-meter setting menu items it would
be on the same frequency where you left the radio. However, when I go to
the menu items for the S-meter settings the radio clearly changes frequency.

You have to use a signal generator when setting the S-meter. You provide a
signal level you want to be S1 then hit the Up or Down key and the present
reading gets transferred to a holding memory. Then you change to menu item
AD and hit the Up or Down button again to save the setting (otherwise the
old setting is retained). You repeat the process for an S9 signal, and once
again for a full scale signal.

I went ahead and changed my S1 setting without a signal generator so that
background noise was S1. Before it was set so that it took a substantial
signal to even get the meter to read.

Curtis

If you can't find any information about extended frequency operating for
that (or nearly ANY) radio here,
www.mods.dk
then your chances are slim of finding that info at all. And since I don't
see any mod for said purpose there, at
http://www.mods.dk/view.php?ModelId=501
you are SOL. Sorry.

Thanks, Steve

Hey Steve thanks for the reply. I went through those sites unfortuntly they didnt have the information i was looking for. However I have been doing some of my "research" and have located the PLL chip , a toshiba TL9122 decade counter. 13 Bits are loaded from the CPU on to it, and there is a 142.0055Mhz crystal that it uses for comparison. So all I need now is the pinout for that IC, and then drive the appropiate lines either high or low to get frequencies outside the normal range.

Unfortunetly toshiba doesnt have information for that IC on its website so I am searching the bowels of the internet looking for it!

# 4872. ICOM AH-2 w/ Kenwood TS-690S ?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-12 20:25:36 UTC
From: Kevin <n9jkp@amsat.org>
Message-ID: <Xns95629CEFE4A61kvinatchorusdotnet@216.168.3.30>
Source record: 19624

I just moved into the city and have an old house with a big attic. There is really no place on the lot (very small 2500 sg ft lot) to put any antennas. The attic is the third floor the peak being 30-35 feet above ground. There is no metal in the attic accept one condiut for a light and the cast iron soil pipes for venting the drains.

I have an AH-2 tuner that I am hoping I can make work with my kenwood TS-690S. I do have a little ICOM 760 mobile that I will use if I absolutely have to but that's really for my car (not currently installed).

I do have the manual but it's not helpful. I did google this but really didn't find anything.

So any thoughts on antenna placement strait or loop? For strait I can go 50' Also should I run COAX from the main floor to the tuner in the attic and use the cast iron soil pipe as ground OR should I have my 50' straight and then bring the antenna on the outside of the building down to ground level (inverted L) and keep the AH-2 in or very near the shack?

Thanks,

Kevin N9JKP

# 4873. FS Kenwood MC-42S mic

FS 2 Kenwood TK-801S UHF Moblie Transceivers. These are commerical 40 watt FM UHF Transceivers for 450-470 Mhz. They are Prom programmable and have 6 channel capacity. One has the Kenwood Mobile Mic and the 12 Volt Power Plug. The other one does not have these items. Both look very nice. They were removed from service while working, but I have not checked them out. No manuals.
Price is $75 for the pair plus shipping from 79602. Thanks, Charlie Hugg, K5MBX

Yes, and then watch the lawsuits pour in. This is just like black
groups that tout for blacks only. Try a white only group. Same
thing. Just an example, NOT a racist remark, I hope.

Just to let everyone know i did manage to do this. Found the info on the IC (a decade counter) after enough searching. Then i figured out that the cpu loads for example 1872 for 146mhz, 1616 for a 145, and a 1360for 144 mhz on to the divider. Notice that a 1Mhz drop = 256 drop in the load group. Did some simple math and to get 142Mhz it would have to load 848. So 144Mhz=1872=0010101010000 in binary and if you switch bits 10 and 11 you get 848 well close enough anyways. So I swapped the appropiate wires going to the PLL and can now tune into the coppers. Going to add a switch to return it to normal functioning as well. It took about 1.5 days of fumbling and searching the net for info before I figured it out finally.

So not a very elegant or complete solution, would have been great if i could just punch in the numbers from the panel. But it works anyways. The police in this area have a high amount of digital traffic and its rather punishing to listen to. I dont think this receiver supports ctccss. Just have to live with that till I can afford a real scanner I suppose.

Hello Kevin!
Personally, I think you would be better off with a couple of trap dipole type antennas for 10-20 meters. Then a loop antenna for 40/80 meters. Interfacing an Icom tuner to a Kenwood radio is fairly difficult. You would have to create a "band changing circuit" so the antenna tuner would know for which band to preset before tuning the antenna when RF is applied. Then you would have to make sure your power output is about 10 watts during the tuning phase of the antenna tuner. As an alternative, you could mount one of the trap dipoles as an inverted V on one of the eaves. Use a heavy duty eave type mast mount with a 10ft TV mast. Mount an eye hook at the top so you could lower and raise the antenna even with the roof for maintenance. If you mount another mast on the opposite end of the house, you could install another trap dipole. That way, depending on the orientation of your house, you could get East/West and North/South coverage. Finally for 40/80 meter operation, you could add 3 or 4 foot PVC "extentions" from the eaves at the corners of the house and mount a horizontal loop. Hope this helps.

# 4883. 'other' Kenwood SSB Filters : YK-88S1 and YK-88S2

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-13 11:38:55 UTC
From: rhf-newsgroups@pacbell.net
Message-ID: <ff3145e8.0409130338.26961770@posting.google.com>

FO&A,

Has anyone tried the Kenwood YK-88S1 or YK88S2 in a Kenwood R-5000 ?

The normal IF Filters used in the Kenwood R-5000 are the
'stock' YK-88S (2.4 kHz) Wide SSB Filter and the 'optional'
YK-88SN (1.8 kHz) Narrow SSB Filter.

However there seems to be two other Kenwood SSB Filters
that 'appear' to be Drop-In-and-Solder (Size and Wiring)
of the Kenwood R-5000 ? {Now is that True}

* Kenwood YK-88S1 (2.6 kHz)
- Wide SSB IF Filter
http://jg1xlv.jp-au.net/yk88s2.htm

* Kenwood YK-88S2 (3.0 kHz)
- Very Wide SSB IF Filter
- Very Narrow AM/MW IF Filter
http://jg1xlv.jp-au.net/yk88s2-spec.htm

Any Comments & Opinions ?

HI, FT-897D or IC-706MKIIG ??

I am looking for the best one...as far as
1- HF receiver performance to hear and to filter in noise...and
selectivity ...( i know its not the best ...but for a mobile and base and
field station for expedition)
2- TX CW quality signal
3- Easy to use as CONTEST station faster in menu driven commands if
needed ? !!
4- Controls commands (numberof commands and best feed back of radio
parameters via computer link)

Thanks for any help ...
Philippe, ve2fu

# 4886. RTV info please??

A tad off subject, but I need to glue some foam-like...rubber or silicone spungy material to plastic.
I have seen Silicone seal or RTV by GE, Dow Corning and DAP. Does anyone know if these are all the same? Is one Acetic acid based, and the other methanol based? Is one better than the other?
Or, perhaps can anyone suggest a better adhesive for this purpose??
Thanks for any suggestions you may have.

There's all sorts of silicon sealer stuff these days. Some is still
acetic acid based and isn't very popular around some metals but that
doesn't sound like an issue in your case.
Weldwood Contact Cement sounds like another alternative for you.

I would agree with the contact cement approach.
Follow directions- contact cement works through cohesion not adhesion.

>I have seen Silicone seal or RTV by GE, Dow Corning and DAP. Does anyone
>know if these are all the same? Is one Acetic acid based, and the other
>methanol based? Is one better than the other?

GE and Dow both make a couple hundred different kinds of RTV. Some are
acetic acid based and some are not... the ones that are not are specifically
sold as being for electronics use most of the time. They are available in
different viscosities as well, from very thin to very thick, and also in
high temperature red versions. DAP only sells an acetic-acid based type
for construction use.

If you are using it on nonmetallic objects, the cheaper acetic-acid sort
is fine, because corrosion isn't an issue.

>Or, perhaps can anyone suggest a better adhesive for this purpose??
>Thanks for any suggestions you may have.

What is the plastic? And is the rubber actually rubber or silicone?
RTV is actually a very poor adhesive, and it shears very easily. But it
is an excellent fill material so if you have open-cell foam, it will grip
it well.

To cement foam rubber to most things, I would tend to use contact cement
(Super 77 or equivalent), because it is a much stronger adhesive and also
fills voids well. Not as flexible as RTV but still very flexible.

Hi, my Dad has an old 260-2 with no batteries, I've never owned one of these fine meters, but he's had his sitting aside without using it for so long he's forgotten what batteries go in it. Looks like 4 in pairs of 2 along each side of the movement (AA's?) and a larger single battery (D?) by itself. I believe all these batteries are 1.5v, whatever they are... Can't find the manual at the moment.

It all depends on the modle . I see your's is the 260-2. Not too sure about that one. All I have seen use a D cell for the low ohms scale. The higher scale could be 4 of the AA cells or a 9 volt battery or maybe a very old one has another type. Not sure if they ever used a 22.5 volt battery or not. The books I have are at my other house as I am in the process of moving.

# 4908. Dual Band Trunk Tracker

Thanks, um... *blush, stammer* what happens if you don't? (watch the polarity) Think I might have stuck one of the AA's in backwards momentarily. Couldn't really find a fuse anywhere obvious...

Meter isn't doing the ohms thing or showing voltage. I'm thinking something snapped someplace. Is there a glass AGC type anywhere or is it some proprietary thing that looks like something else?

Well, you can either be prepared to pay a pretty penny for a custom unit and specify the Ip3 or go to a lower frequency. The best I've ever seen are some 3.75 MHz 10 pole filters made by McCoy. You can see their shape factor and phase and group delay on N2PK's web site for his Vector Network Analyzer. Those are my filters shown there. They exhibit +45 dBm Ip3 as singletons, and drop like a rock to >-130 dB and don't pop back up. I have no idea what they were made for or what they cost but you can bet they were for a severe environment. Second best that I'm acquainted with are some 10 pole monolithic filters at 5.2 MHz, made for AT&T by Motorola. I couldn't measure them but a friend in a professional lab did and a hybridized pair of them measured +46 dBm or presumeably, +43 for each one. Again, about the only thing I know about them is that the application was for FDM of microwave links, where they had to pass a voice bandwidth through perhaps 8 or 10 of them and still be intelligible. I suspect that if I had to pay for them when they were new, I couldn't have afforded them. Gorgeous group delay,

At +35 or 45, you're getting into the realm where if you can put a signal into them that will exercise the max Ip3, you're probably in danger of breaking something with the power. Keep the gain down ahead of the filter. Short of doing moonbounce where Noise Figure is everything, you can probably get by with a much poorer NF than you think. ~20 dB NF, is -120 dBm in a 3KHz bandwidth, and on anything below 20 meters is more than enough sensitivity if you have anything like an antenna. You put 20 dB of attenuation in the front end filters, the mixer and anything else ahead of the narrow filter and a spec of +25 dBm for the filter will do a surprisingly good job in any application short of a laboratory requirement.

Regards

W4ZCB

I question "revolutionize". It looks as if they're taking some fairly standard VoIP capabilities, and providing them as shrink-wrap hardware and software, with some additional value-adds (e.g. PSTN access).

I see some issues in their product which may have results which are ... well, "interesting" is perhaps the best way to put it. They appear to be allowing the user to initiate outbound VoIP calls via radios such as FRS, using voice recognition rather than DTMF (natural enough since most such radios don't have DTMF pads). Security is likely to be an issue, both in re initiating calls (do you really want anyone with an FRS radio in your neighborhood to be able to call people in your phonebook if they can fake your voice well enough), and in privacy. Calls being relayed via FRS or other two-way radios are not secure, and not protected by the statutes which cover cellular phone calls.

They do acknowledge in the FAQ that you can't use the two-way radio interface to call out to the PSTN, but this doesn't jibe well with the statement on their home page that "DingoTel provides low long distance rates to PSTN phones worldwide, and free calls to any DingoTel member." My guess is that PSTN access is available only to those who are using the hard-wired (PC headset) version of DingoTel, and not to people using a two-way radio.

# 4928. VINTAGE MORSE CODE KEY 1938 MCELORY TELEGRAPH

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-16 23:29:33 UTC
From: nuttieone@yahoo.com
Message-ID: <2bfd5c76.0409161529.7a59fe79@posting.google.com>
Source record: 19530

Hi There,

I have the following for sale on ebay,
VINTAGE 1938 MORSE CODE KEY

Radio Telegraph Transmitting Key (Standard Model MAC Key)

Manufactured by "Theodore R. McElroy" who was the World's Champion
Radio Telegrapher.

Made in Boston, Mass USA.

Speed Key Serial Number 5548

Genuine and in good condition and surely a collectors item.

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=5721133571

Any questions can be emailed to me (alanbaker@blueyonder.co.uk)

Thanks for your time,

Alan

# 4929. Bad appreciation of ten-tec ORION ?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-16 23:48:32 UTC
From: Thierry <http>
Message-ID: <414a2660$1@news.vo.lu>
Source record: 19531

Hi,

After have published some articlesabout RTX selection and sensitivity, etc on my website, some readers complain about the poor quality of the new TEC-TEC ORION that some users judged exceptional, including ON4UN.

They speak about PTT swich failing, bug on screen, voice recording failure and more.

Do you have other bad experience with the ORION. Up to now I placed it among the best high-end, but these amateurs who used previuoulsy a TS-850S or a 1000MP told me that it is far to be meet specs read in ads and doesn't deserve its high price...

On eham, orion is rated 4.7/5 on 43 reviews, so rather good or even very good.

Now that the Orion is released for several months, if you own and have used it for several months (not a few hours like some users) do you have any new comment going in the same (bad) direction... or on the contrary you confirm the good quality of the TX and RX ?

Thanks in advance

Thierry, ON4SKY

Why not ask on the TenTec mailing list? There are quite a few satisfied
owners and some
who are not satisfied there.

Hi folks!
If some kind soul (hopefully an HONEST(!!) one has a used commercial
Eprom burner out there in ham radio land, I'd be a tiny bit
interested...
We need to reblow some 2764's EPROMS but if it did others as well
(such as flash or EEPROMS) I'd be more interested as well.

From: root <email@invalid.com>
Message-ID: <10kmcjsst3rda04@corp.supernews.com>
Source record: 19540

If you have an old transceiver you're not using anymore I'd be interested in taking it off your hands. Just got a US extra class license, but have never been a ham. Have absolutely no money to spend on radio. Anything I could repair myself would be great. I can, at the minimum, cover your shipping costs, any more negotiate. Thanks. Email to: w a v e a n g l e @ y a h o o d o t c o m.

# 4939. Fs icom sm6 & yaesu md 100a8x desk mics

Greetings:

I have a "fixer-upper" Icom IC-730 HF radio and it's
matching power supply in separate auctions on Ebay.

The radio has some electrical issues, but the power
supply is in good working condition.

Radio is item # 5721306764 and
power supply is # 5721307393

Thanks,

Tedd, VE3TJD at RAC dot CA

# 4941. FS: Misc, Quantar, Darcom, MT chargers, mics, more....

I'd go to a hardware store & ask for some weatherstrip cement. That type
of job is exactly what it was designed for.

FS 2 Kenwood TK-801S UHF Moblie Transceivers. These are commerical 40 watt FM UHF Transceivers for 450-470 Mhz. They are Prom programmable and have 6 channel capacity. One has the Kenwood Mobile Mic and the 12 Volt Power Plug. The other one does not have these items. Both look very nice. They were removed from service while working, but I have not checked them out. No manuals.
Price is $65 for the pair plus shipping from 79602. Thanks, Charlie Hugg, K5MBX

Source record: 19464
Cross-posted to: rec.radio.swap,rec.radio.amateur.homebrew,rec.radio.amateur.equipment

I have a TS450 that is coming back from the repair shop as costing more than it is worth to have it fixed. I suffered some sort of indirect lightning pulse, as it did not have an antenna connected and was turned off. The guy said that the IF board was bad, for sure, and maybe more. Therefore I am going to try and fix it in my spare time, which means it may sit for a long time. I would not bother, but the radio looks like a mint piece of equipment. So if someone has one that looks like crap, and has some good boards (especially the IF board), I would like to talk. Also would consider buying boards...

That, or that's all he'll admit to in public. "What? My transmitter was set to 1kW? It wasn't supposed to be, although that explains why my electric bill has been so high!"

(No aspersions or accusations intended to Rev Chrysafis...for all I know, he's okay. But I'd bet that's been a frequent defence for those with less than honourable intentions.....while the transmitter room has dud 4CX5000s sitting around. Not that ignorance of radiated power output is a workable defence when it's apparent that measures were taken to maximise that output, for the sake of a workable coverage area.)

How about making your own? I see cheap credit card sized calculators on a regular basis at the thrift store for around $1.00 or less. Just use the push button switch section and place a piece of adhesive plastic with the switch functions in the appropriate places. Of course, a little experimenting and surgery of the calculator will be required.

<< I have a TS450 that is coming back from the repair shop as costing more than it is worth to have it fixed. I suffered some sort of indirect lightning pulse, as it did not have an antenna connected and was turned off. >>

Doug-

Check to see if the power supply regulator might have failed as a result of the strike, causing voltage in the order of 20 volts to damage the TS-450 the next time it was turned on.

For service information, there may be a manual available at http://www.mods.dk/. After you get to the Kenwwod page, look for the link to Manuals. They limit you to two manual downloads per day, and failed attempts count.

You also might try a different repair shop.

Good Luck.

<< if anybody used it.. let me know its performance >>

Leo-

Judging by the way you phrased your post, I suspect you are a salesman for Dingotel!

Therefore, you probably don't want to hear that a two-way radio version of VOIP can be implemented without any such product. It is commonly done using software called "EchoLink", with your computer's built-in sound capability.

Check out http://www.echolink.org/. Software can be downloaded for free, and is available for both Windows and Macintosh computers, and probably others.

Yes, I thought of that one. I inspected several calculators and was not able to come up with a reasonable way to connect to the conductive patterns on the switch plane. In the ones I've looked at, the entire calculator circuit is printed on a piece of flexible clear plastic, maybe a couple of mils thick. The calculator's single IC is mounted on that same plane. A couple of discrete components that are used are pressed against conductive pads on the plastic plane and held in place by the plastic case. I was hoping to find something that actually had a small connector for the key pads, but no luck so far. The other possibility is to try a discarded TV remote control. I'll have to tear into one of those and see if there's any way to connect to the traces coming from the key pads.

But does it have to be membrane, or are you merely looking for a small keypad?
A lot of electronics stuff uses tiny circuit board mounted push switches,
and you could salvage those and make a keypad. Usually, there is a plastic
button that rests over them for actuating the switch, but they can be
actuated directly with your finger on the button.

This might give you more flexibility, since you could arrange them as
you like, and have as many or as few as you want.

VCRs tend to have a fair number of these buttons, depending on how many
pushbuttons they have. Find one in the garbage and see if the buttons
are suitable. Inkjet printers, also common in the garbage, have them,
but not as plentiful. Old stereos, and some car radios are also a source.

The easiest way of making a flat switch panel at home would go to capacitance
switching. Pads of copper etched that can be covered if the circuit's right.
The circuitry puts a clock through there, and when you touch the pad, the
capacitance of your body delays the clock so it's not in sync with the
original, and that causes a transition on the output. Don Lancaster
discusses them in his CMOS Cookbook. It's kind of bulky for multiple
switches, since each uses a flip-flop, but I've seen other similar schemes
using multiplexers for larger numbers of "contacts", though I can't
point you to anything specific. Of course, this whole scheme requires that
extra circuitry, so it may not be the choice for small equipment.

HELP Astron 70 amp PS
I have a astron 70 amp power supply and was hooking up a transmitter
to it and I pulled the power supply closer to me and the positive wire
came loose and hit the ground terminal on power supply.
Now when I turn it on you can hear the power supply turn on and the
light on the power swithch comes on, but no volts comes up on the
meter. I checked the terminals on the back and no volt, very little if
at all.
The outside fuse is good.
I took off top cover and I don't see and internal fuse.
Is there a diode I should be looking for?
I'm sure it has to have some kind of protection if the wires are
reversed.
Any help would be great.
Rich

That is such petty bull shit. Any idiot could see EICO on the damned package. IF the item happens to work with other equipment, so damned what. Listing an item which will "work" with another similar piece of equipment - is not the same as branding it with the name of that other piece of equipment. So, then... don't dare try to sell a set of "standard" Radio Shack test probes which would fit a majority of VOMs and label the brands they'll fit, like Fluke, Simpson, etc. lest some ass hole be offended by it. HOW DUMB. Some times, I really have to wonder about them. Some whiner probably e-mailed them. I can't imagine they edited it. They couldn't possibly check all ads.

You are correct. When I posted this and a couple of other items for auction,
I noticed in rec. radio.amateur.equipment that someone replied with the text
"Keyword Spamming" and that's it.
That was for another item where I commented "like Yaesu" ...but my guess is
that he just turned me in, and ebay shot down only one of my listings.
Funny, it was killed a few minutes AFTER the auction ended.
It really is a bad idea for ebay to get as involved as they do when it is an
area they know nothing about. Anybody in to Heathkits would likely be
interested to read or bid on an unassembled Eico from the 1940's
Oh well....they are letting their success spoil them!

Actually, my response to his signature line was only met tongue in cheek.

He stated, 100,000 microwatts, which is only 1/10th watt.

I thought you had to be running respectable power, either 10 or 100 watts to qualify as pirate radio. In fact, 1/10th watt doesn't even require a license in the FM band.

Some areas of eBay would become quite useless if buyers were allowed to insert text that grabs your keyword searches. A seller automatically thinks he wants to attract the biggest audience, when what he really wants is the best audience.

If I'm looking for test leads, I'll search for that and some variations. But if I want Lafayette test gear, I don't want to see somebody who has test leads that, oh by the way, could be plugged into a Lafayette VTVM. Or somebody flogging an Eico, that looks sorta like a Knight or a Lafayette or a Heath.

I don't mind some useful or innocent text references that snag your attention; the OP seemed to be in this category. But it really burns me to drop onto an auction that seems only very vaguely related to my search, only to find that some spammer has listed 75 radio brand names just to be sure of snagging almost everyone. And since I often run 10 or so very targeted searches, I'll get to see that same dumb auction ten times. And I can guarantee you that I'll turn him in to abuse before I get to the tenth viewing.

OK, then here is one to go by YOUR example.... N.R.I. A school no longer in existence via mail for Electronics courses and others... I had NRI in my search bar and at one time - all I got was that which I was looking for... NOW... you get clothes and all other types of BULL SHIT. So your example is not working either. Same with CONAR - a division of N.R.I. Used to be you got their items. NOW you get much more. IT SUCKS. PART of that reason is because some ass holes don't know how to spell and the search engine brings it up or in the case of E-Bay, sticks it there. Like CONAIR for example, a maker of Hair Dryers and such. CONAIR AND CONAR are close, but one letter can make all the difference. SO, a typo OR misspelled word, gets it into the listing. ALSO, when you list, if you know HOW to list, there are "categories" to list in. SO, back to NRI - how do CLOTHES end up in an ELECTRONICS area? HUH??????? Talk about a screw up, there ya go.

IF using my example, I have a meter made by Lafayette and someone has a set of test leads or other parts maybe a meter movement, knobs, etc. which will work on that item, so be it, let them post under the name... at least I know when I punch it in, I can find it. E-Bay ads are like news papers and news groups.. Skip what doesn't apply. You can usually tell in a glance as most have a picture in the listing. At least in this case, items relating to the Lafayette listing - even if exact replacement parts After Market - will get me what I need. I'd rather sift those ads than finding Denim Jeans under a Electronics area listing. The worst case scenario I can run into for Lafayette, is if typing in that word, and finding say a book on the man - Lafayette... or say the company's catalogs and so on. But to me, that is to be expected. If I want Lafayette Radio, then I need to input that, still I will get some catalogs from the company show up. It may bring up a meter or such as well, that they sold. After all, they did go by Lafayette Radio Electronics. There are many variables there. Your example isn't cut and dry. It still leaves room for error as does mine.

Some are just too lazy to skip over stuff and complain because some one got something not to their liking in a description. This guys ad was not deceptive in my book and I don't think he should have been called on it. Why not worry about the scammers and pay more attention to that than some petty bull shit like this. When writing the ad, some are too damned lazy to read what may be in front of them. I've seen some ads which had such horrific spelling, that alone chased me away. I can't believe how dumb some people are. Didn't they learn how to spell at least, even if their writing skills, like mine, suck? Not everyone is a professional ad writer or writer in any manner... But there is no real time limit I've seen when putting an ad in, shy of what you set. SO why not take TIME to do it at least half decent if not 100%. Come off as an individual with some common sense even if you have

no clue what you're selling that you've picked up at some Estate Sale. Use your spell checker OR a dictionary. READ the labeling on the instrument or package. IF YOU can't spell, then copy it word for word from what you see.. I have to think if you're placing an ad, you CAN read!

Let's just say I agree to disagree with your logic. You have a point, I won't deny that, but it is a weak one as it can't be 100% applied. The bad part is, I'm afraid it will only get worse as E-Bay continues to grow and the declination of our country's spelling and other skills continues.

And, as I always say..... when you're the buyer, NO ONE held a gun to your head to make you hit the enter button to bid. IF ANY THING looks wrong about the ad... DO NOT BID.... How damned hard is that to understand? For Christ's sakes, if you don't like something, like in a store... WALK AWAY. NO ONE makes you spend your money. People really piss me off, crying the blues like they're being robbed at gun point when THEY were the one to agree to it. A big part of the problem are the ass holes who are clueless on how to spell and those who can't make a sound decision to walk away from a situation which they can't see beyond black and white. ANYONE who knew Electronics items would have known what this man was selling. "I" had not problem with it, I'm sure many others didn't either. IF you do not know what the hell you're looking at then you have no business buying it. WHY cry about it? HOW LAME.

The only thing about this man's ad that caught me - was no cable included! Strange for a kit, but hey! I have the option to bid or walk. I don't know why EICO sold it that way, maybe they intended it to be wired to the cable for your particular unit regardless of make as just a "replacement probe - only", I don't know what their intent was. I've made RF Probes here in my shop from scratch, no big deal. I seen the kit and well, I have a ton of cable here, so I'll bid. MY CHOICE. I prefer kits when I can get them instead of scrounging for parts. If I'm not happy when I get it, TOO DAMNED BAD. I will have no one to blame but me. The ad in itself was descriptive as to what is being offered or not included. In this case, like most in my case, if it doesn't pan out for the intended use, it will for other projects. I'm always building or modifying something. That is no worse than me going to a ham fest and buying a box of miscellaneous components for say $5 to get "A" part. The rest will be used at some point. For that $5, I've gotten upwards of $50 in parts. Not a bad investment when you're into USING the stuff. It is a waste only when you do not. If I don't use it to build or modify, then it will be for repairs, as most of what I've bought are still in packages. And regardless whether I buy from a company or Hamfest I ALWAYS test components before installing. I learned that way back, not to trust any parts even if new in package. I only buy things also, which I know I have a chance of doing something with, should it not pan out per the ad. After all, not all ads are honest as to working OR very questionable to say the least such as "it lights up". WHOOPPIEEEE. IF I can't use it for parts for a unit already on hand, repair it should it not work, use it in some way, then I WILL NOT BID - no matter how the ad is written.

Is there a better way? Maybe, but will it satisfy all who use the system or eliminate the errors humans make? Probably not. As I said, I agree to disagree with you. Any points or references I have made past the first paragraph, were not meant to be derogatory towards you personally Mr. Price- NOR does the words you/you're/you've - mean YOU (Mr. Price) personally - the only exception being using your example in the first paragraph of my reply which I don't agree to as being a good one.. So, I hope you don't take it as such. I write this as others would (and will) read it as well. Maybe even those it certainly applies to.

artist, and a crook!

No wonder the Toledo court system required him to see a shrink..

## 4990. Cross-band repeat & NBFM HTs

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-20 16:48:42 UTC
From: N7RX <neal@sacon.net>
Message-ID: <10ku2orsh8d5aaa@corp.supernews.com>
Source record: 19492

I need a multi-band HT that does cross band repeat and has narrow-band FM capability. Look like the IC-w32a is the only one that meets this spec. Anybody know of another?

If not cross-band capable, how about a multi-band that is NBFM capable?

73 Neal N7RX

Neal,

Does multi-band include dual band, 2 meters+440? What do you mean by
narrow? A few dual-banders I know of with crossband repeat:
Yaesu FT-51
Kenwood TH-77

I think the Kenwood TH-75 does crossband repeat with a mod. Also
check with a TH-78 owner.

One warning: Most HT's have minimal heatsinks and heat up very fast.
Keep the output power low, don't talk a lot or both.

73,
Jim

## 4999. Strange Problem With HT - Help!

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-20 23:57:12 UTC
From: SweetMoth@webtv.net
Message-ID: <3051-414F6E58-143@storefull-3115.bay.webtv.net>
Source record: 19399

My HT, power supply and amp are in the living room. The coax runs into the kitchen with a Diamond 2 meter magmount antenna out the kitchen window on a steel plate. I have had no problems for 11 years.

Yesterday I keyed down and heard a buzz coming from the kitchen. I had a friend key down, went to the kitchen to see where the buzz is coming from and it's coming from the outlet next to the window that has NOTHING plugged into it! My units are all plugged in in the living room. What's happening here RF wise? If you have any idea, please either post it here or email me. I have an Extra Class License but this isn't in the books :-( Thanks in advance!

Maybe a loose wire in the outlet ? Sometimes the outlets are wired to each
other and as current is drawn from them they can cause problems.

Might want to check with the Peace Corps about it. Back when I was in, (Dem. Repub. of Congo, 1970-71) they were sensitive about looking like spies (we were frequently accused of being CIA agents, radio or no) that they really discouraged ham radio operations. That didn't stop me and another PCV from operating a missionary's station (9Q5MO, IIRC), a big Swan rig. It was kinda fun being on the other end of a pile-up.

I would think something like a 706 would be a decent choice. Just make sure it's legal where you're headed. Make sure you're properly licensed, too.

Where you headed?

Mark AA7TA

Pro'lly the branch line to feed that outlet comes _down_ the
outside wall (from the attic / from the ceiling.) Makes a
GREAT little vertical antenna -- great for coupling RF from
your nearby vertical antenna.

I'd take the vanity plate off the outlet, darken the room,
and re-create the scenario you explained above. Get in close and
see what is arcing, buzzing, spitting. As others have said, it's
pro'lly a loose connection.

I have Extra Class License, too, but ...

Maybe the IC-703 would be a choice (over the IC-706.) Easier on
whatever batteries or portable power you'll be using -- probably
more forgiving on antenna mis-match -- and, you'll be Sexy DX, so
the lower power won't be a Big Factor. The other folks will bust
their guts to work you (and, you'll find your signal reports will
_always_ be "FIVE NINE" (or better.) HI!HI!

Then a Real Nice Touch will be to donate it to some "indigenous"
ham when you return to The Land Of The Round DoorKnobs.

Here are a some items for sale. Prices do not include shipping. I will ship overseas.

Military Multimeter ME-260/U with RF Probe.....$65 plus shipping
Nice working military unit with RF probe. This appears to be the same probe as used with the HP410 series of meters. Missing back cover.
http://members.cox.net/radiostuff9/mil_vtvm3.jpg
http://members.cox.net/radiostuff9/mil_vtvm4.jpg
http://members.cox.net/radiostuff9/mil_vtvm2.jpg

Digital Precision 2440 Nixie Tube DVM.....$40 plus shipping

This unit will measure DC and AC voltage, and Resistance. This unit has been tested and works. It does not include a power cord.
http://members.cox.net/radiostuff9/dp2440.jpg
http://members.cox.net/radiostuff9/dp24402.jpg

Hewlett Packard HP 400E AC Voltmeter.....$35 plus shipping
This is a tested and is a working unit. It does not include a power cord. It does include a copy of the manual on CD. I have several of these units
http://members.cox.net/radiostuff9/hp400e.jpg
http://members.cox.net/radiostuff9/hp400e2.jpg
http://members.cox.net/radiostuff9/hp400e3.jpg

Hewlett Packard HP 410C Voltmeter.....$20 plus shipping
Not working. It does not include a power cord or RF probe.
http://members.cox.net/radiodx3/hp410.jpg
http://members.cox.net/radiodx3/hp4102.jpg

RCA Type LM-1 Multimeter Plus Parts Unit.....$45 plus shipping
This is an unusual looking Bakelite cased VOM which is from the late 1940's and early 1950's. Measures volts from 3 to 1000 ac and dc volts, 1 mA to 1000 mA DC and resistance. This unit is in excellent condition. Also included is a 2nd non-working unit. The non-working unit has a free movement. I did open up the inside and it is clean with no evidence or of abuse or arcing. It is missing the battery cover which is just a flat piece of plastic.
http://members.cox.net/radiostuff9/rca_lm12.jpg
http://members.cox.net/radiostuff9/rca_lm13.jpg
http://members.cox.net/radiostuff9/rca_lm1.jpg

Vintage Westinghouse Portable DC Voltmeter.....$35 plus
shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are
changed by making the appropriate connections to the meter. The ranges
are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
The instruction card on the inside cover has a date of 1942.
http://members.cox.net/radiostuff9/west_meter2.jpg
http://members.cox.net/radiostuff9/west_meter.jpg

Mil-Spec Power Transformer for Homebrew Transmitter....$25 plus shipping

This was salvaged from a piece of military test gear. All windings have
checked out OK for voltage. This transformer is in good condition. The
transformer outputs are as follows:

* 820-0-820 volts at 100 mA
* 175-0-175 volts at 70 ma
* 6.3 volts at 1.25 amps
* 6.3 volts at 2.5 amps
* 5 volts at 2 amps
http://members.cox.net/radiodx3/xfmr3.jpg
http://members.cox.net/radiodx3/xfmr32.jpg

Chicago Standard - 4 Henry Choke Mil-Spec.....$15 plus
shipping
4 Henry, 250 mA choke made by Chicago Standard Transformer Corporation.
I measured a dc resistance of 61 ohms with my Fluke 87.
http://members.cox.net/radiodx3/choke.jpg
http://members.cox.net/radiodx3/choke2.jpg

Set Of 10 Knobs (Some Matched).....$15 plus shipping
http://members.cox.net/radiodx3/knob_set.jpg

Set Of Six Knobs.....$10 plus shipping
http://members.cox.net/radiodx3/knob_set2.jpg

Unknown Microphone #1.....$25 plus shipping
Neat Brushed aluminum housing. Manufacturer is unknown. Needs a new
cartridge which you can probably get from Radio Shack.
http://members.cox.net/radiostuff9/weirdmike.jpg

Unknown Microphone #2.....$25 plus shipping
Manufacturer is unknown. This does work and was hooked to a Ranger I
when I got it.
http://members.cox.net/radiostuff9/odd_mike3.jpg

Philips 4-65A tube with Ceramic Socket.....$35
Build something! I did check the filament for continuity and it is OK.
No other way to test. The beige sheet in the background makes the tube
appear burned which it is not!
http://members.cox.net/radiodx3/amp_465a.jpg
http://members.cox.net/radiodx3/amp_465asocket.jpg

Eimac 3C24 Power Triode Transmitting Tubes.....$15 each plus
shipping
I have two of these that are NOS tubes which are new in the box. I did
check the filaments for continuity
http://members.cox.net/radiostuff9/eimac3c243.jpg
http://members.cox.net/radiostuff9/eimac3c24.jpg

Books
1995 ARRL Handbook.....$10 plus shipping
http://members.cox.net/radiostuff9/1995arrlhandbook.jpg

ARRL - The Mobile Manual 1962 Edition .....$8
http://members.cox.net/radiostuff9/mobilebook.jpg

ARRL - FM and Repeaters 1972 Edition.....$6
http://members.cox.net/radiostuff9/fmbook.jpg

Fifty Years of ARRL - 1965 Edition.....$10
Neat book published in 1965 details the founding of an first fifty years
of the ARRL from 1914 to 1964. Lots of neat vintage photos.
http://members.cox.net/radiostuff9/fiftyyearsarrl.jpg

Ham Radio Horizons Magazine - First Issue.....$15 plus shipping
This is the first issue of Ham Radio Horizons magazine which premiered
in March of 1977. This was a spinoff of Ham radio magazine by Jim Fisk
designed targeting beginning and new hams. This issue is in excellent
condition inside and still has the mailing cover over it. This mailing
cover is a duplicate of the front cover. The back side has a handwritten
address along with 26 cents in US postage.
http://members.cox.net/radiostuff9/hr_horizons.jpg

Thanks for looking.

Is that by any chance an outlet with a GFCI (ground fault circuit
interrupter) built in? Current electrical codes generally require
that these be used for all outlets around areas with water. They
usually have a solenoid or other sort of circuit breaker inside, and
it's possible that this is being partially activated by rectified RF
currents.

> Andrew VK3BFA

Not always - are those things "visible". I agree with the gentleman's
thought of a GFIC being tripped or influenced somehow with RF. RF does
strange things and if you're not an old hand at it, it can be very
confusing - even with experience, it can create some confusion! Move the
antenna to another spot in the room or house away from outlets, etc. While
you may not hit the same repeaters, you can at least eliminate the RF as the
problem of the buzzing at that outlet. On the other hand, it is possible
too, that if the GFIC wasn't bad to start with, an RF Overload "could" have
created a problem - depending on the make up on that particular unit.
They're not that expensive to replace, if you know how to do one. While I
don't think it a high probability of the RF doing damage to it, I wouldn't
dismiss the thought completely. I've seen and I'm sure others have as well,
things in our electronics dealings which go beyond theory and explanation at
times. It is never good to "assume" anything when dealing with the unknown.
Eliminate all possibilities until the situation is cured.

Since it has worked for 11 years without a problem, my guess is, perhaps something has changed in the antenna system. Perhaps a loading coil has given up the ghost. Maybe the kitchen window has been opened and closed on the coax a few too many times and has destroyed the braid, broken the center conductor, or just mashed it to where it is making some sort of impedence bump in the feedline.

You mention the buzz is coming from an outlet in the kitchen. I suspect this is a GFCI type outlet that is required by code anywhere an electrical outlet is near a sink or faucet, etc.

What I am suspecting is, your coax is now radiating a signal instead of delivering it to the antenna and the RF is getting into the GFCI circuitry in the outlet.

I would-
(1)-Check SWR on the entire system. If you have high SWR, try replacing the antenna. If that doesn't solve the problem, then the problem is most likely in the feedline and that will need to be replaced.
(2)- Visually inspect the feedline for wear, distortion, etc.
(3)- Try routing the feedline differently away from the outlet if possible.

I am curious, how much feedline you have between the transmitter and the antenna. Since you mentioned the radio was in the living room and went out the window in the kitchen, I am going to guess you have at least 30-40 ft of feedline. I am also going to guess that you are using RG58 type coax since it is going through a window.

If this is the setup you are using, you are losing a LOT of signal just getting the tranmitted signal to the antenna (assuming you are using VHF). If you are using UHF, its even worse. I realize you may not have

much control over where you put your radio or antenna, but the less feedline you have, the better off you will be, especially if you are running low power levels such as from an HT.

Get him to talk to his P.C. coordinator, there are plenty of ex-PC's who are hams and they'll know the ropes for wherever he's going. It also depends on whether there's mains power available. When I was in Tuvalu, both I (an Aussie contractor) and one of the PC guys had Yaesu FT-747GX's. They put up with the indignities of the climate (much as you described in the OP, but add coral dust) without missing a beat for three years.

Cheers.

Ken

Bzzzt, wrong, would you like to try for what is behind Door #3?

If the Pass Transistors were shorted, you would see the voltage of the
filter capacitors and rectifiers on the output. He stated that he had
"No or little output voltage". This would indicate that the Pass
Transistors are OPEN, blown that way by the High Current when the output
was shorted, or the rectifiers are blown OPEN and not producing any
DC to the filter caps.

It's still darned good advice. If there's a fuse or fusible component
between the DC filter caps and the pass transistor, it might very well
have blown if the pass transistor shorted during an overload.

From what I've heard, bipolar power transistors are as likely to fail
shorted as they are to fail open.

I don't debate or try very hard to teach idiots but the Astrons have a
crowbar circuit that will activate and the output voltage will drop to a
very low value. Most simiconductors fail by shorting and are not blown
open.

Standard C568A 95%+ with extended range mod. $175

Icom 02AT with wall wart.
Icom BC-35 plus extra Ice brick battery $ 65

Icom IC-229H 90% $ 85

Icom SM-8 Like new. $100

Maha MH-C777 Universal Charger-Conditioner LNIB $ 20

Dynamic Communications
Model A470-25 $ 10
Sold as is, no manual.
Model 10-0 $ 10
Sold as is, no manual.

Carver Mobil Audio Amp 95+%
Model M-2120
$ 50

All items will include manuals unless noted.

I have a lot of older computer parts/MOBS-CPUs/boards
ect. Everything from Rll,MFM to SCSII controllers.
contact me for what you are looking for.
I have an External Scsii CdRom changer that uses Pioneer
carts.

I also have a lot of C64's 3 good 3-5 fixable or parts.
Including a SX64 portable with screen that is fixable.
Assorted peripherals - drives,printer,parallel/serial ports,
modems, tape drive, graphics pads, joysticks, ect.
A lot of cartridges, and software - games to productivity.
Included are extra books for programming ect.
Plus software to run a bbs from the C64..

I would like to sell it all as one group. Will cost more,
if sold piecemeal....

$150 takes it all on the C64 equipment.

Shipping is NOT included

Perhaps this is his own stuff, so be it... The point is, he did some things a few months back which is what placed the shadow of doubt upon him. He had solicited for donations of equipment for a Ham club, and if memory serves me correct, specific items. A couple months later - a similar list of items was placed up for sale by him, stating it was being sold BY him FOR the club. Funny, when they were supposedly in need in the first place. The reason given for need was Emergency Comms. Now, WHY would you solicit for gear then sell it, IF YOU NEED IT? It had a very shady appearance. THAT is why people are now questioning the legitimacy here. And to be honest, his replies gave no hint of honesty or facts, but cast further doubt on him. Most anyone who witnessed all that can vouch for it. Do some googles on this, you may see it for yourself.

Apparently, you missed all that, but MANY did not. IF he was doing things on the up and up then - so be it. He has no one to blame but himself for drawing suspicion as to HOW he was doing it. Was he guilty of any wrong doing? That isn't for me to say, but he sure made it look bad for himself. That was the opinion of quite a few.

Message-ID: <2621-415178E9-8@storefull-3112.bay.webtv.net>
Source record: 19441

Thank you, everyone for helping me. The handyman just came up. I could have sworn I tried this with nothing plugged in but the hair dryer seems to have been the problem. There's a reset button which was off (when you turned the dryer on, it stops it from working),

When this button is off, the socket buzzes when I key the HT. When the button is reset, no buzzing. We tried it in another kitchen outlet and it did the same thing. So it's not the outlet that needs fixing. What's happening technically is beyond me. If anyone understands this, I'd appreciate an explanation. I am wondering how much of this may be due to old coax. I'm careful to not crush it...the window is never tight, I always leave a space.

# 5040. Need: Manual for Dictaphone Logging Recorder

Newsgroup: rec.radio.amateur.equipment

I can't be the only one who's ever wanted to use one of these for
hamateur/SWL stuff.

I have need of the op/service manual for the Dictaphone Prolog
9800 series recorder, specifically the 9809. I have already contacted
Dictaphone, and not had any success (the originals have been purged from
their archives).

Original preferred, good-quality copies will be considered if the
schematics are reproduced clearly and full-size. In that event, copying
costs will be covered.

I will keep an eye on this thread in the newsgroup, or you can
drop me a note at the human-readable address below.

Re-badge them as FRS. HI!HI!

No doubt the final(s) have gone south, and
the 250' range you now see is the leakage from the driver stages.

# 5048. New program "Not a Trap"

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-22 21:42:33 UTC
From: Reg Edwards <g4fgq.regp@ZZZbtinternet.com>
Message-ID: <cisrk9$h9d$1@hercules.btinternet.com>
Source record: 19350

Extract from program notes.

Program Name: NOTATRAP.exe Author: R.J.Edwards G4FGQ

A TWO-BAND ANTENNA WIRE LOADED WITH AN L & C PARALLEL-TUNED CIRCUIT

The LC parallel-tuned circuit is constructed exactly like an antenna trap. It
is located in the antenna wire and used as L or C loading at 2 other resonant
frequencies. Parallel-tuned circuits have a reactive impedance on either side
of resonance. On the low frequency side there is a +ve inductive reactance. On
the high frequency side there is a -ve capacitative reactance.

The purpose of the LC loading components is to detune the antenna wire from
its natural 1/4-wave resonant frequency. When the loading circuit is behaving
as an inductance the antenna resonant frequency is reduced. When the loading
circuit is behaving as a capacitor the antenna resonant frequency is increased.
The pair of resonant frequencies depend on the LC ratio, on wire length, and
on the location of the LC loading circuit along the wire.

For a given loading location along the wire and a given pair of resonant freq-
encies this program calculates the L and C loading-component values. The pair
of frequencies lie above and below the unloaded resonant frequency of the wire.
The LC circuit behaves as an ordinary trap at its own resonant frequency which,
by experiment, can sometimes be arranged to fall into a third amateur band. But
to calculate such a fortunate coincidence is beyond my elderly patience.

The program has a built in signal source which generates a wide-ranging
testing frequency which can be used to 'measure' the input impedance of the
antenna versus frequency, checking resonant frequencies and other antenna
characteristics.

Download program NOTATRAP from website below and run immediately.

NO, because parts which are being activated by RF won't show signs of
anything outward, such as being blown. Things are not always OBVIOUS.
There is nothing stopping one from looking, but RF induced troubles are

virtually invisible until you figure out HOW the RF is doing it's magic.

Your coax does NOT have to be broken, to create RF troubles. When you
transmit, the signal from your antenna is getting into the circuit which
most likely isn't shielded against such things, and is playing havoc with
it. THAT HAPPENS....... RF does strange things.......

# 5051. WTB : Kachina Control Head

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-23 00:14:09 UTC
From: Kenn <nospam@nospam.com>
Message-ID: <lzo4d.235427$Fg5.95657@attbi_s53>
Source record: 19353

I would like to buy a control head for a Kachina 505DSP. Anyone have one or know where I can get one ? Can't find mine since the move.
nospamkenn_828 at yahoo dot com
put it together without the nospam to reply.

Thanks, Kenn

Hang on - the fault problem has been solved, and it wasnt rocket
science - the point I was trying to make as a working technician is
that you can waste ENORMOUS amounts of time theorising about a problem
when really, as has been said, you investigate the blatantly obvious -
and to be honest, I have spent hours chasing exotic faults which
turned out to be really simple - and if I had thought about it rather
than theorising, would have found them in 10 minutes.

All techs make a living from simple, obvious faults - the complex ones
provide emotional satisfaction but dont pay the gas bill. The
intuitive "flash of genius" method of fault diagnosis doesnt work - it
just provides entertainment when you later reflect on how much time
was wasted!

Well, I know the "Fault" was found in this case... Now, why did it buzz? Do you really think anything is going to jump out and say - here I am? I doubt it.
RF with anything in electronics, needs "Experience". THAT keeps you from wasting lots of time guessing. You get a feel for the problem, a sense of direction and follow the leads. People who GUESS and waste time doing so, ARE NOT EXPERIENCED.

Back to the fault, not having it here to visualize, I can't say for certain, but I'd bet a lack of shielding had a major role in it. The "'triggering" circuit most likely was being affected, somehow. RF doesn't always have to make sense. But if you narrow down the parts affected and know that RF was the cause, then you can work towards a cure to keep it from happening again.

# 5054. FS: Uniden BC296D Scanner and Antennas

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-23 03:24:22 UTC
From: backyardastronomer@hotmail.com
Message-ID: <21061e52.0409221924.22648803@posting.google.com>
Source record: 19356

I am selling my BC296D. It is only 5 months old and has hardly been used at all, which is why I am selling it, so it is in like new condition. I am including everything that came with it, original box, docs, warranty card, accessories, plus I have some Radio Shack antennas to go along with it as well, the 800MHz (20-283), wide band moble mag mount (20-032), and the deluxe rubber duck replacement (20-034). New everything would cost $575, I am asking $450, you save $125. Satisfaction is guarranteed. If you have been interested in getting on of these fine scanners, this is a chance to get one and save a few bucks and pick up a couple of extra antennas.

Thanks,
Doug

Nah, your talking total crap! - confused by trying to do this by
remote control and getting lost in your own brilliance..... Experience
is the name for seeing the same fault before, a feel for the problem
is making a link to something similar.
But I can guarrantee my method would have werked - why, because I
would have checked it was the socket and not something else attatched
to it that was buzzing. - as the home handyman did - perhaps he is an
experienced electronics engineer like you suggest who called upon his
"experience" or maybe he just looked for the blatantly obvious!
And if a $10 hairdryer is suffering RFI - big deal, dump it in the
bin, or press the reset button. No complex theory involved here sonny.
Have you had 20 years experience, or the same year 20 times
over.......

Just to add to this, I plugged in the toaster, the microwave oven and several other appliances and the only thing that caused the socket to buzz when I key the HT is the hair dryer which is on OFF (but not reset). When I pushed the reset button with the hair dryer still off, the socket didn't buzz. I would like to understand exactly what internally in the socket is causing that buzz which is extremely loud. Does anyone know? Thanks for your responses to my thread.

# 5065. KENWOOD TS450 INTERMITENT PROBLEM TRANSMISSION

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-23 21:46:03 UTC
From: f4atm@wanadoo.fr
Message-ID: <63ebcb67.0409231346.db22c50@posting.google.com>
Source record: 19367

I have an intermitent problem on all bands with my TS450S. While
transmitting on ssb the swr goes up to about 3 to 1 from almost flat,
alc
indicator goes full scale and of course rf output drops to about five
watts.
When this is happening you can stop talking into the mike and there is
still
RF going to the antenna.
It seems that there is some internal occillation that is causing this.
i have tried every conceivible combination of grounds, antennas, feed
lines
so i think it is a problem with the transceiver.
Has anyone had this problem? Any help would be appreciated. Thanks in
advance for reply to f4atm@wanadoo.fr

Frankly, I believe that it takes a lot of balls to post an ad for a
Korean made product and include a waving American Flag and a cartoon
character that proclaims "Go America" in that same ad.

Do you totally lack common sense, or just so shameless in your pursuit
of a sale that you don't care?

Harry C.

# 5068. LMR HT/ EEPROM identification

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-23 23:53:31 UTC
From: Dave <davidgregory@eastlink.ca>
Message-ID: <ImJ4d.71724$vO1.385452@nnrp1.uunet.ca>
Source record: 19370
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I recently acquired 2 HT's from an army surplus store and I am at a loss finding information on how to re-program them for 2 meters.

I'm posting to see if I can jog anyone's memory on these old radios for scraps of information.

The HT's are made by Canadian Marconi Company, model DP-2071 which have a frequency range of 136-174 MHz and 5 watts output. The EEPROM inside is a MCM 2802 device, 14 pin.

So far the information I have come up with is that the EEPROM is a 32x32 bit device.

Thanks,

Dave, VE1DAY

You didn't tell the man what he wants to know about the rest of it, so since
you have all the freaking knowledge, let's hear it! If it is so freaking
simple that he could "look" at it, then how come he needs to ask? SO, GUIDE
HIM, HELP HIM "SEE" IT. Don't answer me, help the man!

As for my experience and income ability, it's none of your business. Has
nothing to do with this post. Hams who are not EMPLOYED in electronics
fields often have more RF experience than some 2 way radio techs out there
who deal with it FOR a living. I'm just saying NOT ALL is so simple as to
"JUST" look at it.

From: t@rogers.canada
Message-ID: <fWgiYSiOQd92-pn2-IIddzdx53Tcy@localhost>
Source record: 19373
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Greetings:

During shipment of the radio, one of the silver push buttons on
a IC-751 HF radio fell off. Does anyone have a spare??

The button that is missing is the one from the WRITE button
but any of the top row buttons will work. They just pull off.

Please contact me at ve3tjd at rac dot ca

Thanks,

Tedd, VE3TJD

# 5073. WTD: YASEU G-800SDX ROTOR CONTROL

Newsgroup: rec.radio.amateur.equipment

WTD: YASEU G-800SDX ROTOR CONTROL

Looking for the control box only for a Yaesu G-800DSDX rotator. Will
consider rotor + control box, although rotor need not be working.

I believe the control unit is the same for the G-800SDX, G-1000SDK,
and G-2800SDX, so any of these are acceptable.

Please contact me at NOSPAM-k0dan@arrl.net (of course removing the
NOSPAM).

Tnx & 73

Oh, sorry. Well, - first, check if anything is plugged into the
socket. (Very important - stops spawning of silly theories from
newsgroups participants) See if noise vanishes when object removed. If
it does, then socket not faulty and radio problem solved. Go to
Alt.Electronics.Hairdryers and post hairdryer fault question so
hairdryer experts can offer plausible explanation.
>

Certainly, "not all" is simple - thats why we have people studying
quantum mechanics. And one of the things you learn very early in
electronics (or , indeed, any other field) is that a rocket science
approach is usually not necessary - try the simple things first.

As for the reason the hairdryer was making buzzing noises - who
cares....... but if you are REALLY, REALLY interested and have lots of
time on your hands, nothing more meaningful do do with your life, then
there are countless ways you can hypothesise(sp) but until you get
your hands on the actual hairdryer they are just that, idle
```

speculation. And really, if there wasnt a single working hairdryer on the planet, would it bother you all that much?

And my remarks were addressed to you - I was asking you to question your own problem solving methodology (in case you hadnt noticed, the problem HAD been solved ages ago).

Anything else you want to get shitty about?

de VK3BFA Andrew.

> open.

Bzzzt, Wrong again, If the Crowbar SCR is shorted or in the conducting
state, then the whole output of the powersupply would be dissipated by
it, and that would then cause the Pass transistors to fail from
overcurrent, or the input AC fuse to fail from overcurrent. He stated
in the original post, that the AC fuse was GOOD, but he was getting no
output voltage on the DC terminals, therefore there would be an OPEN
somewhere in the supply that was caused by the OVER CURRENT of touching
the DC Terminals together.

Your analysis skills are a bit lacking here dude.

> Does anyone know? Thanks for your responses to my thread.

Hi Moth,
this is indeed a bizarre problem, and by remote control I can offer no more than a theory - I cannot vouch for its truth without a field study of the offending apparatus.

The only plausible theory I can see is that the length of the hair dreyer cord plus the cutout is resonating at your operating frequency and this energy is being transferred back into the socket causing it to buzz as its acting as a detector.

The hole in this theory is the amount of RF energy needed to cause audible buzzing of the AC outlet - it would have to be considerable! - if this is the case, then anyone in close proximity is getting far too much exposure to RF energy with possibly consequent negative effects on their health. I would suggest you move the antenna well clear of the kitchen.

I did suggest examining the AC outlet - they do fault, particularly in a kitchen environment because
1.They are used more than any other outlet, with a heavy cycle of connect/disconnect of appliances. This causes the spring contacts in the plug to weaken and arc.
2. They get dust/fluff build up from the operating cycle, in a kitchen with cooking oil in the air, this can cause a conductive path between active and neutral.

A visual examination usually reveals this, ie signs of overheating /charring /contact arcing.

I would also check the hairdryer - if the thermal cutouts have operated, it is usually because the device is clogged with dust/fluff and has overheated - pull it to bits and clean it, or bin it and buy a new one - your choice.

I was not attempting to belittle you in any way, Mr NS decided to go off at a tangent and I foolishly tried to discuss fault finding

methodology with him. You are already doing this with your plugging in other appliances etc to try and replicate the fault - observation and experimentation are the basis of ANY field of science. Volta used this method in inventing the "Galvanic Pile" (aka battery) when he observed his meal of frogs legs was twitching when his knife came into contact with them and the pewter plate (with a vinegar dressing - the elctrolyte) - he observed, experimented, and invented the battery. (a diversion from this your problem, but hopefully a demonstration of the "scientific method" - a most useful tool)

No, I drive a Ford Bronco and my ham rigs includes a Barker &
Williamson 5100 transmitter and a Hallicrafters SX-71 receiver.
Everything else is home constructed, including 2-M and 420-Mhz rigs.
(I am now in the market for a mint condition Collins 75A4!)

I simply objected to you waving the American flag in your desperate
attempt to sell a inexpensive, foreign made, non-repairable and
throw-away consumer item.

I agree with you in general, but I suspect a significant percentage of real hams reject this and remain loyal to quality American made radio products that, although costly, at least can be repaired and maintained. This is why used products like the Collins 75A4 and even Heathkit products continue to command high prices. When they break, you can fix them.

It's not entirely a patriotic thing with me. I simply wouldn't want to own any ham equipment that I can't maintain and repair myself under emergency conditions. In fact, this is something that was traditional in amateur radio until very recently.

Harry C.

Hey all, have some more stuff on the barrel head:

Photo here: http://www.sleepguides.com/auction/forsale1.jpg

1ea. Motorola Saber, UHF H44SAN7139AN, 448-490MHz, 5D core, 12ch. Stickers gone, works excellent, can program to suit. No chrgr.
$125

1ea. Motorola Visar, UHF H05RDH9AA7BN, 403-470MHz, Looks NEW, not a scratch. Sticker on back is blank...??...Must be factory re-furb or similar. Works excellent, can program to suit, includes good Interstate and older moto battery. No chrgr.
$150

1ea. NEC VHF QCII voice pager, good condition, 155.xxx not sure, but will find out if it matters. Works great, no chrgr, uses AA batt.
$35

3ea. Housings, MT1000 and 2 P200. 1 has broken screw mount, next has no metal but all buttons intact, last has batt plate/contacts/fuse, but missing one side button.
$10

2ea. Light lens, GREEN. Looks to snap on a rotator maybe? See photo, decide for yourself. $10

Radios are bench checked and guaranteed not DOA, price includes programming if necessary.
Uship USPS or UPS.
Thanks!
Randy

Try checking the wee little switch on the backside of the "control
head" -- immediately behind the [POWER] button: "phones/spkr" switch.
It just might be in some not-fully-seated position.

True 'nuff. 5 kHz peak deviation seems to be standard here in the U.S.

I understand that in many European countries, amateurs have settled on
2.5 kHz peak deviation. This allows a larger number of repeaters to
be packed into a given amount of spectrum and geographic space...
and as the European 2-meter band is only half as wide as the U.S.
band, it seems like a good tradeoff.

Has it been established that the buzzing is in the socket? How
about operating the dryer at the end of an extension cord, both
tripped and reset, to see if the buzzing follows the dryer plug or
stays with the socket?

# 5105. Searching audio .wav for Sky Sweeper Pro

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-26 10:32:20 UTC
From: Thierry <http>
Message-ID: <41569ac9$1@news.vo.lu>
Source record: 19307
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.equipment

Hi,

Having tested Sky Sweeper Pro 5, a marvellous spectrum and phase analyzer
and DSP software (see review on eham and my websoite), I am looking for
short .wav files (1 to 5 min max, mono, 8/16 bits, 10-40 kH samples/sec)
suited to be read by Sky Sweeper Pro 5.x.
My objective is to estimate the threshold of the application.
I know for example that a signal 30 dB over the noise but associated to
shadows tunes at 24 dB during an EME QSO cannot be directly decoded
digitally but its DSP filtering can help, etc. I would like to determine
this minimum in other working conditions than "loud and clear"...

I am mainly interested in SSTV (Martin's, Robot's), CW with noise but
readable digitally (e.g. from Aurora, MS or EME traffic) and any Hell or
other digital signal, including QRSS. Of course good quality files are
welcome too.

Please make proposal via the email adr on my website
http://www.astrosurf.com/lombry

Thanks in advance

73

Good point. A lot of hair dryers have a GFCI built right into their
plug, so that they can be used with reasonable safety around water
even if the wall socket is not itself protected by a GFCI.

I'm not a he. I'm a woman. I think I will cut my hair off like Yentl did in the movie since this hair dryer story has caused all of this commotion :-)

I tried the hair dryer in every socket in the house. The only one it buzzes in are the two in the kitchen. So, it's not just one socket, in fact, I don't think it's faulty sockets at all but rather the proximity to the antenna. I really appreciate your explanations and will print out these posts to show someone when they come over to troubleshoot, preferably another ham this time rather than my building staff. I'll come back here when I decide to sell a closet full of tubes and equipment that my father left behind. Thanks again to Andrew, NoSpam and everyone else who took the time to reply. Hair today, gone tomorrow, LOL..73

I'm in a similar boat, having passed my BASIC (Canada) exam. I need
something very rugged because a) I will take this everywhere,
including camping trips and b) I tend to drop things!!!

I've done a lot of reading on the eHAM site (posted elsewhere) and did
a lot of listening on my scanner to hams in Toronto. I had the
occastion a few days ago to listen in to a conversation between two
hams with the VX-7R, the model I'm most interested in. I was worried
about the sound quality postings but they sounded great. Then I heard
one of them mention he was on an external mic. Just then another ham
buddy of mine came into the conversation. I called him on his cell and
he relayed my request to have the two vx-7r's switch to their internal
mics. They did and they both sounded GREAT!

I've basically decided to go ahead with the vx-7r, now that I've had
the chance to hear them in action!

I think that you will find, if you pause to read carefully, that not all the information is required. Your privacy is protected, and you may be missing a very good group. I don't run Yaesu, but I do belong to a couple of other Yahoo groups.

I'd take a second look! You can always join for a bit, have a look around, and if you decide later to opt out you don't leave any remnants of your information behind.

# 5126. Re: Cross-band repeat & NBFM HTs

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-27 21:07:34 UTC
From: Steve Nosko <suteuve.nosukowicuz@moutouroula.com>
Message-ID: <cj9vjj$1ed$1@newshost.mot.com>
Source record: 19329

The term has changed over the years and has a couple of definitions.

There is a 'mathematical' or technical definition where it depends upon the modulation index. I don't remember the number, but I think it may be where the modulation index produces sidebands such that those past the first (Bessel order 1) have levels that are considered insignificant. [[ Be advised, FM has sidebands to infinity...always]]

Then there is the practical or colloquial. Right now, 2.5 KHz peak deviation is called "Narrow FM" because 5KHz is/was the 'norm'. When 30 KHz was the norm, 15 KHz was called narrow or "split channel". After 15 KHz was established, 5KHz was split channel or narrow. And so it goes. Then there was the QST article about "Micro band FM" with extremely little deviation (An April spoof since it is not technically viable).

The multi-band Kenwood TH-F6 / F7 (144/222/440) is NFM capable. However, I suspect that they only cut the Tx deviation and leave the RX filtering the same as 5KHz deviation...

By the way. The 15 KHz channels currently used by US hams are not what the 5KHz deviation is designed for. 15 KHz. is actually "alternate" channel operation and is only intended for systems with enough physical separation to keep the adjacent channel energy low enough to cause trouble.
A 5 KHz system can not 'normally' handle 15 KHz spacing. The sidebands are not, and the required Rx filtering can not be made compatible with 15 KHz spacing. The two are mutually exclusive. 5 KHz deviation has significant sideband energy in the adjacent 15 KHz channel and the RX filtering required for the 5 KHz deviation must be wide enough to accept this energy in order to provide acceptable distortion on channel.

You don't want much do you? And I bet in typical Ham Radio fashion you want
to pay about $49 for it. Of course if you were selling it you'd want
$2,999. Good luck.

Similar approach here; I use a 'disposable' Yahoo account for their
groups and for use in the newsgroups and mung the personal
information. Works fine for me.
Howard

# 5132. Radio Shack HTX-202 low transmit power

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-28 03:23:51 UTC
From: "Monte B. Carroll" <monteNOSPAMcarroll@bellsouth.net>
Message-ID: <33lhl0lkss828c2u4guhfq2lg97apk3f1u@4ax.com>
Source record: 19333

Just over a year ago, during an event our club provides communications for, my Radio Shack HTX-202 ht started intermittently transmitting at low power even when set to "high". Since then it has gone to low power all the time. This happens using battery or external power with the whip or external antenna. The Google search revealed KB8ZCJ's fix for his problem but I don't want to solder unnecessarily and am not convinced that mine has the same malfunction as his did. http://www.phreak.org/radio/mods/htx202fx.txt The LCD's on mine light up as low power.

And the http://www.mods.dk/view.php?ArticleId=2721 page told how to, apparently, make the radio permanantly either high or low power. Any recommendations on a switch replacement or a repair facility?

Thank you for your efforts. Remove nospam for email reply.

# 5133. Re: Cross-band repeat & NBFM HTs

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-28 06:01:08 UTC
From: N7RX <neal@sacon.net>
Message-ID: <10lhvhinc7d1k54@corp.supernews.com>
Source record: 19334

That's interesting ...What I'm referring to as "narrowband" is the new NTIA channeling plan for public service band beginning at 162.0125 and progressing at 12.5 KHz intervals to create 942 channels through 174 Mhz. Everybody calls it narrowband but nobody can explain why its any different than what's in use now except for the channelization.

I know that I can set my TH-D7AG to the 4th decimal (e.g., a 6.25 KHz increment), but I don't know if it's really doing what NTIA refers to a "narrowband."

I don't normally respond to wise-guy, know-it-all "trolls"
here on the newsgroups, but I'll have to make an exception
this time.

Why do you find it necessary to gripe at people who would
rather buy nice gear than junk? Why do you assume that we
all expect to get it for nothing? Why do you assume that
we all want obscene prices for things we're selling? One
of you hinted that my criteria are unrealistic. Do we now
assume that no one takes good enough care of their gear to
be able to meet criteria like mine?

I know what nice AL-80B's are going for, and I'm willing to
pay it. So far, I've gotten three responses. All of them
offered amps that meet criteria 1,2,3,4 and 6 on my list.
All of them were offered at or near market value. I fully
expect more similar offers to come in before I make a final
decision on which one to buy.

Didn't your parents teach you that if you don't have anything
nice to say, you should just keep your mouth shut? Didn't
they teach you to keep your nose out of others' business?

73,
Dean K5DH

Although not amateur currently about all of the US land mobile is
going to 2.5 KHz deviation also then onto 1.25 KHz by then the " audio
" will be digital most likely.

You can no longer import a Part 90 radio that has 25 Khz channel
spacing, they all must be 12.5 and could be electronically switchable
back to 25 KHz spacing a couple of years ago.

Not the same thing, but I just bought a like-new AL-811 for $350. Not a scratch, not a dent, and works perfectly.
However, I DID know the guy that bought it new, and it is almost mint. I didn't try to argue, but I thought it was very nice and I plan to keep it. Don't think I got hurt at all.
'Course, lots of guys would want it for $200 and expect all the things you asked. LOL!

I don't see how it's too much to ask to buy good equipment, 'cuz it is/can be done everyday.

# 5154. Kenwood TM-V7A crossband repeat and remote control?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-29 04:08:17 UTC
From: Jacques Paquin <jpaquin@*spam-me-not*frontiernet.net>
Message-ID: <MPG.1bc3fed8d880da75989687@news-roam.frontiernet.net>
Source record: 19256

I have a Kenwood TM-V7A that I have used for crossband repeat with my Radioshack TX-420 around the yard.

I just started playing with the dtmf remote control feature of the Kenwood but have not figured out how to do that along with crossband repeat. I can send the dtmf to start repeating (C) but nothing is sent when I key up the uhf link from the ht to the moble. Neither is anything sent out on UHF to the mobile when input is heard on the VHF band.

What am I doing wrong? I'd like to use crossband repeat but not be limited to which VHF repeater I've chosen. I'd like to be able to crossband *and* remote control.

Can anyone explain how to do this (very slowly)?

jacques

Here are a some items for sale. Prices do not include shipping. I will ship overseas.

Military VTVM ME-260/U with RF Probe.....$65 plus shipping
Nice well built working military unit with RF probe. This appears to be the same probe as used with the HP410 series of meters. Missing back cover.
http://members.cox.net/radiostuff9/mil_vtvm3.jpg
http://members.cox.net/radiostuff9/mil_vtvm4.jpg
http://members.cox.net/radiostuff9/mil_vtvm2.jpg

Digital Precision 2440 Nixie Tube DVM.....$40 plus shipping

This unit will measure DC and AC voltage, and Resistance. This unit has been tested and works. It does not include a power cord.
http://members.cox.net/radiostuff9/dp2440.jpg
http://members.cox.net/radiostuff9/dp24402.jpg

Batch of W.W.II Crystals.....$40 plus shipping
39 Crystals. See photo for frequencies. Here is a link to the frequency conversion chart http://members.cox.net/n7rk/ft241_xtal_list.jpg
http://members.cox.net/radiostuff9/xtal_batch.jpg
http://members.cox.net/radiostuff9/xtal_batch.jpg

Nye Speed-X Chrome Telegraph Key.....$45 plus shipping
http://members.cox.net/radiodx3/chrome_key.jpg
http://members.cox.net/radiodx3/chrome_key2.jpg

Hewlett Packard HP 410C Voltmeter for Parts or Fix It.....$20 plus shipping
Not working. It does not include a power cord or RF probe.
http://members.cox.net/radiodx3/hp410.jpg
http://members.cox.net/radiodx3/hp4102.jpg

RCA Type LM-1 Multimeter Plus Parts Unit.....$45 plus shipping
This is an unusual looking Bakelite cased VOM which is from the late 1940's and early 1950's. Measures volts from 3 to 1000 ac and dc volts, 1 mA to 1000 mA DC and resistance. This unit is in excellent condition. Also included is a 2nd non-working unit. The non-working unit has a free movement. I did open up the inside and it is clean with no evidence or of abuse or arcing. It is missing the battery cover which is just a flat piece of plastic.
http://members.cox.net/radiostuff9/rca_lm12.jpg
http://members.cox.net/radiostuff9/rca_lm13.jpg
http://members.cox.net/radiostuff9/rca_lm1.jpg

Vintage Westinghouse Portable DC Voltmeter.....$35 plus
shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are
changed by making the appropriate connections to the meter. The ranges
are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
The instruction card on the inside cover has a date of 1942.
http://members.cox.net/radiostuff9/west_meter2.jpg
http://members.cox.net/radiostuff9/west_meter.jpg

Chicago Standard - 4 Henry Choke Mil-Spec.....$15 plus
shipping
4 Henry, 250 mA choke made by Chicago Standard Transformer Corporation.
I measured a dc resistance of 61 ohms with my Fluke 87.
http://members.cox.net/radiodx3/choke.jpg
http://members.cox.net/radiodx3/choke2.jpg

Set Of 10 Knobs (Some Matched).....$15 plus shipping
http://members.cox.net/radiodx3/knob_set.jpg

Set Of Six Knobs.....$10 plus shipping
http://members.cox.net/radiodx3/knob_set2.jpg

Unknown Microphone #1.....$25 plus shipping
Neat Brushed aluminum housing. Manufacturer is unknown. Needs a new
cartridge which you can probably get from Radio Shack to work.
http://members.cox.net/radiostuff9/weirdmike.jpg

Unknown Microphone #2.....$25 plus shipping
Manufacturer is unknown. This does work and was hooked to a Ranger I
when I got it.
http://members.cox.net/radiostuff9/odd_mike3.jpg

Philips 4-65A tube with Ceramic Socket.....$35
Build something! I did check the filament for continuity and it is OK.
No other way to test. The beige sheet in the background makes the tube
appear burned which it is not!
http://members.cox.net/radiodx3/amp_465a.jpg
http://members.cox.net/radiodx3/amp_465asocket.jpg

Eimac 3C24 Power Triode Transmitting Tubes.....$10 each plus
shipping
I have two of these that are NOS tubes which are new in the box. I did
check the filaments for continuity
http://members.cox.net/radiostuff9/eimac3c243.jpg
http://members.cox.net/radiostuff9/eimac3c24.jpg

Thanks for looking.

Hello,

To celebrate the 4th birthday of my site, I propose you a riddle : who am I ?
Four years ago was born a multidisciplinary French-speaking educational web site which dared to approach very original topics like the theory of relativity, quantum physics or the philosophy of sciences. In complement the autor being impassioned for astronomy, meteorologist, photographer and computist, he reserved a large part of his site to astrophysics, bioastronomy and amateur astrophotography, and did recently a digression to meteorology and ecology.
Eclectic in his opinions, prolific and verbose, wanting to touch even more readers, he opened new English pages devoted to amateur astronomy (astronomical optics, image processing, technical comments, software review), radioastronomy and amateur radio, as many activities that he practices with assiduity. But where does he find all this time wondered readers ?...
Today this site acquired its maturity and does propose you not less than 1200 educational pages, more than 7000 images and hundreds of animations and audio files. It even includes a translation module. It becames a reference as testify his guest book. Childs 12 years old connect to it as well as professors at university. One connects to it from all over the world, and to be accurate from 155 different countries. 40% of readers are English-speaking whose 12% come from the USA (6% from Can., 3% from the U.K., 1% from VK) ! To wonder what magnetism comes out from this site !...
But you will judge by yourself. Have you recognized it ?

Indeed, it's LUXORION, already 4 years ; -)

From: GeorgeF <av8tor@licensed4funREMOVEBEFOREFLIGHT.com>
Message-ID: <SHY6d.5513$ls6.3360@newsread3.news.atl.earthlink.net>
Source record: 19266

Recently Iï¿½ve been getting into 2 Meter SSB and having fun. Currently Iï¿½m using a Yaesu FT-847 and a pair of 2 meter loops (the KU4AB loops) stacked with the top loop at 25ï¿½.

Pretty much if I can hear it I can work it. Regularly work stations about 120+ miles away with 50 watts. Iï¿½m looking to improve my receive. The 847 has a built in Preamp (I donï¿½t know the gain or noise figure). Would I do better to buy an external preamp and not use the 847ï¿½s built in preamp? If so please give me some model numbers of quality preamps which will help.

Thanks
George

It is called keyword spamming which is designed to get a hit on an auction even though someone isn't searching on that name. Kind of a crappy way to get someone searching on Heath to get a hit on an item for Eico.

I still do not think the lister was at fault - at least not to the point of his ad to have been pulled. That was so petty. I've seen many items not affiliated with a brand, listed under it. Then there is category. Laziness may play a lot in this. Clothes being listed under an Electronics area. "IF" it was the SELLER who made the error in this particular listing, it was very slight in comparison to many others I've seen. I've seen much worse and I doubt it will get better. Spelling alone in many of them SUCKS. Some of them are written so horribly, the first few words are enough to turn me away. They write like they have no education or common sense. There was a long thread of "horrible" spelling in E-Bay ads about a year ago in yet another newsgroup. I realize not everyone is an "AD" writer, but to make so many typos or to spell so poorly! WOW..... I liken Newsgroup listings and E-Bay listings to a news paper. If it interests me, I read it OR if the first line of what "appeared" to be interesting - turns me off, I move on. I don't waste my time.

As it is, the probe having been discussed was relisted by the gentleman and was sold. It ended a couple days ago if memory serves me correct.

I have 2 or 3 left of the GPS boards, ET-101, 12 channel engine boards. We bought them for a project and got too many. I will sell them for $55 each or all 3 for $135 plus shipping. Full specs below. We also have 5 Cirronet 2.4GHz WIT2410 DSS transceiver modules with MMCX to SMA whips for external antennas - I will sell them for $100 each. I also have chip antennas (patch) for the GPS boards.

Specifications:

a.. Channels: 12 parallel channels
b.. Sensitivity:-170 dBW
c.. Output Messages : NMEA 0183 V 2.2 protocol and supports command:GGA ,GSA,GSV,RMC,VTG,GLL
d.. Hot Start: 8 sec., average
e.. Warm Start: 38 sec., averate
f.. Cold Start: 45 sec., averate
g.. Acceleration Limit : <4g
h.. Altitude Limit: 18,000 m
i.. Re-acquisition: 100 ms
j.. Velocity Limit: 515 meters/sec
k.. Time Accuracy:lus synchronized to GPS time
l.. Position Accuacy:
a.. 15 m 2D RMS without SA
b.. 10 m 2D RMS WAAS enabled
c.. 1-5 m DGPS corrected
m.. Supply Voltage:
a.. 3.8~6.5 VDC
n.. Power Consumption:
a.. Continuous mode 60 mA
b.. Trickle mode 25mA
o.. Dimension: 72mm * 42 mm *12 mm
p.. Storage Temperature:-40 C~ 85 C
q.. Operation Temperature:-40 C~80C
r.. Humidity: Up to 95% non- Condensing
Features:

a.. SIRF star II Low Power Version
b.. All functions available as ET-202
c.. Supports different types of antenna connector
d.. Pin to pin ,compatible with ET-101 (SiRF Star I)
e.. Compatible with Rockwell & Conexant Jupiter/NAVMAN..etc

# 5168. IC-706 MK2 Poor RX FM

Newsgroup: rec.radio.amateur.equipment
Date: 2004-09-30 20:32:44 UTC
From: py5cl@yahoo.com
Message-ID: <14cd908.0409301232.3b5e4522@posting.google.com>
Source record: 19270

My IC-706 MKII after warm up few minutes ,the FM RX lost sensitivity
in all
bands, only strong signals, are receive. The other modes still with
normal RX.
If change to SSB or AM is OK. The problem is only in NARROW
FM, Normal FM and WIDE FM, the TX is OK all time.

Iï¿½ve sent an e-mail to Icom tech support but they said only sorry and
no ideas for this troubleshooting.

I would appreciate very much any suggestion, comments or help.

Thanks,

73ï¿½s de Carlos, PY5CL

I would soon be purchasing HF radio. Any models you can recommend that would also supplement as a scanner in terms of wide band coverage besides normal 3-30 MHz? Continuous coverage upto 1.5 GHz would be desirable. TIA.

## 5171. Thordarson transformer specs?

Update. I started to try the mod below. Get the switch cover off
about half way and decided to stop for fear of permanently damaging
the radio. Put it all back together. Works fine now. Full power
restored.

# 5173. Icom CS-2720 software opinions?

Newsgroup: rec.radio.amateur.equipment

Source record: 19275

I'm considering purchasing the Icom CS-2720 Cloning Software (and the cable) for the Icom IC-2720 dual-band mobile. There seem to be no reviews, no downloadable instruction manual, no details at all anywhere on the web. I'd like to know some about it before breaking the seal on the CD.

Any user opinions?

Is it programming software or just for cloning two radios?

Will it import from or export to Microsoft Excel or even delimited text?

Is there anything I really need to know to make a decision? Honestly, I have difficulty programming the radio using the printed instruction manual.

I have an old Yaesu FT-470 which does a solid job. I don't think it
puts out five watts, but I don't know of too many HTs that do. If
you're going to be operating through repeaters, though, chances are you
won't need a whole five watts, just a decent antenna on the HT and a
clear shot at the repeater. (If you use an HT in the car, consider
getting some kind of external antenna and just connect it to the HT.)

What I've been using for the past couple of years is the Yaesu FT-817.
It's an ultra-portable QRP transceiver, supporting not only HF (160m
through 10m) but also VHF (6m and 2m) and UHF (70cm or "440"), and all
modes (plus it receives 500kHz through 30MHz, plus the FM broadcast
band, the AM aircraft band, and a good portion of the VHF-hi public
service band). It's almost as versatile as an HT -- a bit heavy to hang
on your belt, but a shoulder strap does fine, and it comes with one.
I've used it when operating on the parade route at the Rose Parade, plus
some other parades and various special events in the area. At full
power it puts out a full five watts, but I doubt you'd need that much --
not to mention the fact that the more power you use, the shorter your
battery life will be.

Since I can pretty much only afford one radio these days, the '817 does
the job for me. Your mileage may vary. Void where prohibited. ;-)

Curious!

A few years ago, my own HTX-202 came up with an error code that indicated that the PLL had failed to lock. I decided to open it up to take a look, and while I was at it to perform a simple mod intended to remove a birdie on 146.76.

When I got it open, I took a look, chickened out and carefully put it back together again. It has worked perfectly ever since -- birdie and all.

I wonder what opening and closing the case has to do with fixing the control circuitry/software in that little box.

Monte,

In reality, that's a $50 radio. Sad to say, but it's true. They are just a commodity - throw it out and buy a new one. Any repair center is going to charge at least $65 an hour for service. If you're not able to fix it yourself, it's really not worth the cost to have it repaired.

A bad solder joint would be a good first guess. It would be common to all
those issues listed thus far. A component bumped just enough to get it to
make contact. OR a mechanical connection like a ground - disturbed when unit
was disassembled and reassembled.

Cleaning out some gear that hasn't been used enough to justify the space
it's taking up:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3843642628

This package is helpful for general VHF/UHF testing and filter alignment
(and antenna work, if you have a directional coupler and RF probe or
power meter.) Also makes a decent tracking-generator substitute if you
have a spectrum analyzer with a max-hold feature.

Thanks! -- jm

Hello,

due to the lack of space I have to blow out some NOS Siemens
electrolytics.

Datecoded 1984 NOS NIB they will surely be fully useful.

They have 470 uF at 250 V, two in series will provide stable and
reliable 240uF at 500 V.

Regular price for the box of 100 pcs is EUR 80,-

Special offer for the box of 100 pcs: EUR 50,-

Thatï¿½s 50ct for a 5$ electrolytic !!!!

If you buy 10 or more boxes price will be EUR 42,- per box.

See

http://www.askjanfirst.com/kb/KON8311.jpg for a picture and

http://www.askjanfirst.com

for our homepage.

or send me an email if you need more info.

I ship worldwide, shipping upon request.

Jan

In article <r42dnbteRbVoCtLcRVn-jQ@comcast.com>, jdwalton@comcast.net says...
> It's not for me, I have all vintage Halli-scratchers -- but one of the
> recent college grads who will be going to somewhere in Africa doing
> agricultural/arbiculture work. He's not a ham yet, but I talked to him and
> he wants to be "hammitized".

I would suggest checking out the FT-817, FT-857 and FT-897 rigs from Yaesu. The FT-817 is the best in terms of portability and power consumption, but QRP operation requires a bit of work on the antenna side of things to ensure decent communications. The other two have higher power output levels but are a little bit bulkier (not by a huge amount, but somewhat).

A good idea would be to purchase a Pelican case to keep the radio gear in when being transported or stored. They seal up very well to protect against the elements, are available in a wide range of sizes, and come with foam cushioning that can be cut to fit whatever it is you're transporting. I =think= I remember seeing them at Home Depot.

Standard C468A LNIB $ 90

Standard C568A 95%+ with extended range mod. $175

Icom 02AT with wall wart.
Icom BC-35 plus extra Ice brick battery $ 65

Icom IC-229H 90% $ 85

Icom SM-8 Like new. $100

Dynamic Communications: Model A470-25 $ 10
Sold as is, no manual.
Model 10-0 $ 10
Sold as is, no manual.

Carver Mobil Audio Amp 95+% Model M-2120 $ 50

All items will include manuals unless noted.

I have an External Scsii CdRom changer that uses Pioneer
carts.

I also have a lot of C64's 3 good 3-5 fixable or parts.
Including a SX64 portable with screen that is fixable.
Assorted peripherals - drives,printer,parallel/serial ports,
modems, tape drive, graphics pads, joysticks, ect.
A lot of cartridges, and software - games to productivity.
Included are extra books for programming ect.
Plus software to run a bbs from the C64..

I would like to sell it all as one group. Will cost more,
if sold piecemeal....

$150 takes it all on the C64 equipment.

Shipping is NOT included

Nope I have been using it for quite a while and have never seen such a thing.
MY computer gets scanned twice a week for crap like that and I have not seen
it come up. Perhaps it is coincidental, and you already had it on your
machine or picked it up shortly after installing Avast.

Well first try to keep up there sparky. Reporting this to the proper
athorities is not a good idea since its a Virus. Obviously someone
that reads the Rec.radio.amateur newsgroups has is a goof ball brain
dead
and opened one of the previous virus laced messages and is now infected.
Everyone should run norton/macafee or any host of virus protections on
thier system

And formost, should never ever ever open a link posted on the internet.

rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.boatanchors,rec.audio.tubes

I have 5 4-1000A type xmitting tubes for sale. Two are Eimac 4PR1000A. One is a Amperex 4-1000A. And the last two are "JAN" 4-1000A's. All have been tested and make very good output. Glass is nice and clear (can email pic). Price for the "PR" tubes is $175.00 each. And $150.00 each for the regular 4-1000A's. All prices are PLUS boxing and shipping from 96002. I ship in 5 gal. paint buckets. This is a great way to ship these big ol glass tubes.

I also have a SK-510 socket w/chimney clips,a SK-506 chimney and plate cap for the 4-1000's. Price is $100.00 for all three items.

Please reply to me at kf6ikc@sbcglobal.net and not the list as I do not check it very often.

Take care,Stan

I just got a Xerox Digital Time Domain Reflectometer Model 600T80024. It's an 8"x9"x3" black plastic box with a LCD readout and 12 digit keypad for programming, and 3 BNCs for input, output for a scope, and sync. A 4 position rotary switch for off, 50 ohm, 75 ohm and monitor. It looks like the cable type and velocity factor as well as other parameters such as meters, feet, or nanoseconds can be programmed. It's portable,battery powered and on powering the LCD indicates XEROX 1985. It seems to work but I get an ERROR indication most of the time because im hacking and don't know what I 'm doing without basic instructions. No luck with Google or xerox.com, xdss.com or their 800 number. Any tips or leads on how to run or program this thing appreicated.
tnx

the hf transceivers that also have 6 meters, 2 meters 70 cm and above
quite often also have receiver coverage between the vhf/uhf ham bands.
check their tuning specs at the icom/kenwood/yaesu web sites for the
particular coverage you're interested in.

Sounds like the one I have, but mine's called a LANCA DIGITAL TDR.
No other info. Possible that it was marketed under multiple names.
Holler if you find anything.

Hello all,
Recently I purchased a low-power VHF transmitter kit from Ramsey. After building this kit, I have discovered that it will not work for my purpose. I am trying to transmit audio and video about 20 feet from a satellite receiver to my bedroom. The power output from the transmitter is so low that the picture quality is very poor. I am a novice and I am hoping the experts that use these newsgroups can help me. I will post a link to the Ramsey kit manual. Will some of you guys please take a look at this manual, and suggest some simple (hopefully) methods to increase the power of this transmitter? There is no chance of interference with the neighbors, as my nearest neighbor is far away. Any help would be greatly appreciated. If you want to email the response, please send it to mndflmr@hotmail.com

Here is the link to the kit manual:
http://www.ramseyelectronics.com/downloads/manuals/TV6.pdf

Thanks for any help

Joe

Looking at the specifications, the problem should be having too much
signal, not too little. What kind of antenna are you using on the TV?
Is it pointed at the transmitter?

Dick - W6CCD

The transmitter would necessarily comply with the FCC rules. Modifying it
to increase power is illegal.

If it does not transmit the distance represented, then either the
construction is wrong or the specifications are wrong.

The best and least expensive way at this point is probably to use better
antennas on each end. What are you using now?

Ten milliwatts is more than enough for a measly 20 feet, and i am
sure the kit puts out more than that.
Match (tune) the antennas at both ends for starters, orient them to
point at each other is the next step, and have a decent (sensitive)
receiver.
I only had a matched antenna at the (sensitive) receiver, and got
about 100 or so feet at 10mW.

wrote:

Thanks for all the hints. I have messed around with different receive antennas and I have finally gotten a usable picture. It kind of surprised me that I had to go through so much trouble at such a short distance. I am afraid I will never understand RF. At any rate, now my problem is with the audio (yes I have fiddled with all the adjustments in the transmitter). I cannot get the POPPING out of the audio. I phoned Ramsey and was told to exchange the 270 pf cap for a 220 pf cap. This cap is mounted on the underside of the board (see board drawing on the PDF). Well I will give this a try. I still wouldn't mind upping the power somewhat. I know there are resstrictions by I have no neighbors nearby. For some reason the schematic drawing is missing on the PDF. I do have the schematic that came with the instructions. Not that it does me a lot of good with my limited knowledge! Anyway, thanks everyone for the input.

I concurr. That transistor has the capability of putting out one watt,
though I don't think the circuit is designed to do that much. Even so, if
it is putting out even 100 miliwatts, that should get you several hundred
feet...with decent antennas. Once you are sure the circuit is operating
properly, work on the antennas . I did a TV transmitter of about 10 mw and
a really short whip antenna and got 20 feet no problem. Stuck it onto the
top of my camcorder and walked around the house. This was with the TV
"transmitter" from my 1970's "Pong" game and one of those broad band MMIC
amps...50 ohms in/out and a 18 inch whip above the camera. It was actually
in a Bud box with a home-made bracket that slipped into the light shoe. Had
to be a crummy antenna.

Hello,

I need to built a simple, cheap antenna system for a 2.GHz audio-video link. At the moment I'm just using thick wire as the antennas on the transmitter and receiver. This system works surprisingly well... except for one little glitch:

While moving the transmitter, I find there are small, highly localised patches of space where the radio link fails completely. These "dead" patches of space are only a few square centimetres in size.

I'm not a radio engineer so I'm not too sure what's going on. If I was forced to make an educated guess then I'd say the problem was caused by interference caused by reflected, out-of-phase signals. For example, it's conceivable that the receiver could be picking up two 'copies' of the transmission from the TX - one 'copy' is the direct signal, the other 'copy' is a signal that has bounced off some surface - these two 'copies' would cancel eachother out when they're 180 degrees out of phase.

So... this brings me to the question I posed in the subject line: why do WiFi basestations use two antennas? For example, my 3Com basestation has two little whip antennas sticking out the back. Are these two antennas used to combat the problem that I am experiencing? If so, how can I implement two antennas on my system?

If not, how else can I combat the problem I am experiencing?

A little more info about my system:
The system is part of a wearable camera with recorder. The camera, transmitter, microphone and a battery are all worn in a hat. The receiver, recorder and battery are worn in a bag. The system doesn't have to transmit very far (only a few meters) but I do need the signal to be stable.

It's a technique called 'space diversity' that is also used in many radio
systems such as radio microphones and cellular radio. Two separate
receive aerials are used, on the principle that they are unlikely to both
be in a null at the same instant. There are various techniques to
implement this which range from simply coupling the two antennas together
to having entirely separate receivers and just selecting the best signal.
In your case it will complicate things considerably I'm afraid.

-Arthur

Is it anything like the one Homer Simpson used for a 'covert' operation
against the Kwiki-Mart?

Dave

I didn't see that episode.

But I hope not - mine should be covert enough to go un-noticed in everyday
situations (going to the pub, taking the tube etc)

Jack.

great post and replies ;)
I'd just like to say you'd find a warm welcome in 'uk.radio.amateur' I
would'nt wonder. It'd be a good place to get the ham 'theorists' going
regarding the single / twin antenna question. I've seen these home made 2
Gig antennas before
and as a ham myself, I appreciate that sort of thing.
Kind Regards
brainz

# 5262. Windows program for Icom IC-40s

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-08 02:07:41 UTC
From: appspamtothisspam@yahoo.com.au
Message-ID: <a00c5623.0410071807.6135ba54@posting.google.com>
Source record: 19164
Cross-posted to: aus.radio.cb,aus.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.misc

Is there a Windows version for programming the Icom IC-40s?
Unfortunately the dealer DOS version supports only Comms 1 & 2.

Failing an existing Windows version, can anyone supply me all or some
of the following information:

* File format (I assume it is encrypted as the same style as for the
Icom R10).

* What data is sent/received and in what sequence.

* Any other useful information.

* Any tips for programming comm interfaces. I'll be using Delphi 5.
I've never written a comm utility before. Might as well try now.

Bruce

# 5263. Re: Why do WiFi basestations use two antennas?

I agree also that the second antenna is for diversity but none of the
manufactures can answer why it is needed if spread spectrum is suppose to be
so innately fade resistant, even though the spread spectrum Wifi is using
now with CCK isn't really truly random anymore.

# 5264. Advice on SW for logging QSO and printing QSL cards.

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-08 06:01:35 UTC
From: Mauro <mauro.succi@libero.it>
Message-ID: <33q9d.30116$N45.785397@twister2.libero.it>
Source record: 19166

I'm looking fof advice in selecting a SW for logging QSOs and, most important, to print QSO data on pre-printed QSL cards.
I've seen good logging SW, but most of them just allow printing of address labels.
A few are just not stable, other are complex to use.
Any advice is more than welcome!
Thanks.

Mauro

With very short direct and reflected paths typical in indoor
installations, you are not going to have multiple nulls within the
spread frequency range. In order for a spread spectrum system to work
properly in a multipath environment, there should be several multipath
nulls within the spread range. If there is only one wide dip covering
your spread range, it can take out most of your signal.

If the spread range is from say 2400 to 2430 MHz, the corresponding
wavelengths would be 125 - 123.5 mm so the spread in wavelengths is
1.5 mm so you would need at least a path difference 40 wavelengths or
5 m to get a phase difference of 180 degrees that would cancel the
signal at one end of the spread range but add up in the other end.

With a larger frequency spread or larger path distance between the
direct and reflected signal, the phase difference would be several
times 360 degrees and there would be multiple nulls (at 180, 540 etc
degrees) and multiple peaks, within the spread range, which the spread
spectrum modulation could easily tolerate.

# 5271. New program TRAP3.exe

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-09 00:41:24 UTC
From: Reg Edwards <g4fgq.regp@ZZZbtinternet.com>
Message-ID: <ck7c3k$fti$1@titan.btinternet.com>
Source record: 19173

NOW AVAILABLE ** New Program "TRAP3.exe"

This program calculates the performance of an antenna trap. It also assists with selection of trap capacitor value, coil length and diameter, and number of turns. For full design of a trapped dipole use in conjunction with program TRAPDIP.

An independent signal generator is built into the program. It generates a testing frequency which allows the traps's performance, input impedance versus frequency, to be 'measured'.

One small file, size = 43 kilobytes.

Have you ever wondered what your traps are really doing? Download program from website below in a few seconds and run immediately.

Got a motherboard the other day that has a Marvell Yukon gigabit chip on it.
Comes with "virtual cable tester" (VCT) software. Reading the white paper
on the Marvell site it turns out that the VCT uses a TDR built into the
gigabit chip.

Board with those chips are available for 30 bucks.

Hams at UK rallies typically tend to smell rather badly, too. And look
like child molesters. Is this a world-wide phenomenon or a purely
British one?

The IC-78 does not have a VFO mode. You have to pre program memory channels and work from them. So even though you can redily program the memory channels, you can't tune around like the VFO in the IC-718 allows. If you want to move even a KkHz you will need to reprogram the memory channel.

Must be purely British as no other country seems to have the
paranoia we seem to have about child molesters.

Well, if it's stuck on 3.865 then you're golden, just sell it! You could probably get several hundred over market due to that 'rare' extra feature. har-har....

Seriously though... did ya check to see if the button is stuck? Membrane, carbon or mechanical switch? Have you mechanically removed/cleaned the switch? I've seen switches stick in the faceplate due to film/buildup/etc. Just a thought, I'm no radio tech...

good luck and post the problem if you get it fixed.
tnx!

As a UK amateur who attends rallies (not "ham" please, it makes me sound like something off the butcher's slab..!) I take offence at that. I don't look like a child molester, at least nobody has ever told me I do. Nor do I smell.

Please retract your statement forthwith.

I certainly will not! I'm also a UK amateur/ham who attends rallies so
the slur is equally applicable to me as well. The remark is a
generalisation, of course and doesn't apply to every single ham in the
country. Just a significant proportion. But I dare say the same could
be said for train-spotters, real-ale enthusiasts and stamp collectors.

Yes, that's what you'll be telling you lawer when you've been done for
kiddie porn. (joke)

But, seriously, that sort of evolutionary psychology is fatally flawed. The
most glaring problem with it is that we're social animals - what makes us
humans different from all other animals is our ability to share thoughts.
What makes humans such a powerful (or lethal, depending on your perspective)
species is that we no longer have to wait millenia to evolve new faculties -
we can evolve *culturally*, which is orders of magnitude faster than
biological evolution.

So, what I'm getting at is that there are loads of reasons for associating
with other people other than to get your end away. What we're doing right
now is an example - we all feel compelled to share our thoughts on these
news groups without any desire to have sex.

Jack.

Reg is right, but it's an oversimplification. The contact can be
indirect for the purposes of self-propagation. You might not want to
shag the person you're shaking hands with, but you presumably want to
make a good impression on them. Maybe it's a job interview; maybe
you're making a new friend; whatever. The motivation (usually
subconscious) behind the gesture is to better your chances of
replicating yourself; increasing status/wealth-generation/social
standing, whatever, are means to a successful biological end.

# 5310. How to convert spectrum data in audio ?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-10 16:45:52 UTC
From: Thierry <->
Message-ID: <4169674d$1@news.vo.lu>
Source record: 19211

Hi,

Do you know a software that 'd convert a spectrum to voice (the opposite to what do a spectrum analyzer like Audio Wizard or Audacity) ?

The idea is to convert the visual spectrum of stars to voice (e.g. 400nm to 400Hz.) or a radioastronomical signal recorded at SHF, etc.

I know that acoustic engineers could generate such audio files and some musicians do such performances, but that means a lot of hardware, what I cannot offer.

Even if this is a nonsense, maybe that a genious programmer developed such tool for mateurs...

Any idea ?

Thanks in advance

Thierry

From: Jimmy Mac <kb6zop@remove.manicarcade.com>
Message-ID: <LLead.16853$54.278364@typhoon.sonic.net>
Source record: 19222

Hi All,

I'm working on a LOW BUDGET project and I am trying to use junk-drawer componants to revive some old equipment for some soon-to-be HAMS.

One project I have is to install a CTCSS (PL) board into a conversion UHF rig. I have the tone board but it's not a ComSpec which are the ones I am most familiar with.

Can any of you help me ID and possibly come up with a spec sheet on the following part?

It's using the MX-Com MX315 chip Older model - no SMT. Has six dip switches instead of the usual five. Has a five wire connector with the following lables:

8T - Orange Wire - 8T??
RT - Yellow Wire - Receive Tone??
E - Brown Wire - ???
TB - Red wire
TO - Green Wire - I would assume to be Tone Out

On the componant side of the board is X52-1260-?0
On the solder side is J25-3186-03

I checked into MX-Com but they are long gone..

Any assistance would be greatly appreciated!

TIA

Please email any response to kb6zop AT manicarcade dot com

Look up "mixing" or audio mixers. I have heard audio recordings that have taken the "noise" generated by and recored from radio astronomy and mixed with an audio tone to give a more pleasant sound. Quite interesting "music" from the stars.

Mmm ?

FYI I found that in Audacity,
http://www.astrosurf.com/lombry/qsl-ham-software.htm#Audacity
it is possible to export FFT in TXT file (in View, Plot Spectrum, Export).
Then in menu Project, it permits to Import Raw Data... too (in txt, etc).
That works.

The other solution is to find on the Internet something audio processing
"FFT inverse" (FFTI).
But I haven't find a good product yet.

Here are a some items for sale. Prices do not include shipping. I will ship overseas.

Ten Tec Argosy 525 CW-SSB QRP Transceive.....$275 plus shipping
This is a switchable 5 watt or 50 watts, no tune-up transceiver that will work SSB and CW on 80, 40, 30, 20, 15 and 10 meters. This radio runs off of 13.8 volts DC. This radio will also run QSK. This unit is in nice shape and works well. It does have some scratches. This radio has the optional noise blanker and a power cord. I measured 50 watts and 5 watts on my Bird wattmeter. Includes a copy of the manual on a CD.
http://members.cox.net/radiostuff9/argosy10.jpg
http://members.cox.net/radiostuff9/argosy102.jpg
http://members.cox.net/radiostuff9/argosy103.jpg
http://members.cox.net/radiostuff9/argosy104.jp

Hewlett Packard HP 651B Audio Test Oscillator .....$100 plus shipping
This is a highly stable capacitance tuned oscillator that will go from 10 Hz to 10 MHz so it can be used as an both an audio oscillator or low frequency RF signal generator if you don't need to go above 10 MHz. It has a sine wave output adjustable from 10 microvolts to 3.16 volts into 50 or 600 ohms with two separate outputs through the front panel connectors. This is a working unit. Does not include a manual or power cord.
http://members.cox.net/radiostuff9/hp651b.jpg
http://members.cox.net/radiostuff9/hp651b2.jpg

Military VTVM ME-260/U with RF Probe.....$65 plus shipping
Nice well built working military unit with RF probe. This appears to be the same probe as used with the HP410 series of meters. Missing back cover.
http://members.cox.net/radiostuff9/mil_vtvm3.jpg
http://members.cox.net/radiostuff9/mil_vtvm4.jpg
http://members.cox.net/radiostuff9/mil_vtvm2.jpg

Digital Precision 2440 Nixie Tube DVM.....$35 plus shipping

This unit will measure DC and AC voltage, and Resistance. This unit has been tested and works. It does not include a power cord.
http://members.cox.net/radiostuff9/dp2440.jpg
http://members.cox.net/radiostuff9/dp24402.jpg

Batch of W.W.II Crystals.....$40 plus shipping
39 Crystals. See photo for frequencies. Here is a link to the frequency conversion chart http://members.cox.net/n7rk/ft241_xtal_list.jpg

http://members.cox.net/radiostuff9/xtal_batch.jpg
http://members.cox.net/radiostuff9/xtal_batch2.jpg

Vintage Westinghouse Portable DC Voltmeter.....$35 plus shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are changed by making the appropriate connections to the meter. The ranges are: 1, 5, 15 and 150 volts. This is a working unit in nice condition. The instruction card on the inside cover has a date of 1942.
http://members.cox.net/radiostuff9/west_meter2.jpg
http://members.cox.net/radiostuff9/west_meter.jpg

Set Of 10 Knobs (Some Matched).....$15 plus shipping
http://members.cox.net/radiodx3/knob_set.jpg

Set Of Six Knobs.....$10 plus shipping
http://members.cox.net/radiodx3/knob_set2.jpg

Unknown Microphone #1.....$25 plus shipping
Neat Brushed aluminum housing. Manufacturer is unknown. Needs a new cartridge which you can probably get from Radio Shack to work.
http://members.cox.net/radiostuff9/weirdmike.jpg

Unknown Microphone #2.....$20 plus shipping
Manufacturer is unknown. This does work and was hooked to a Ranger I when I got it.
http://members.cox.net/radiostuff9/odd_mike3.jpg

Philips 4-65A tube with Ceramic Socket.....$35
Build something! I did check the filament for continuity and it is OK. No other way to test. The beige sheet in the background makes the tube appear burned which it is not!
http://members.cox.net/radiodx3/amp_465a.jpg
http://members.cox.net/radiodx3/amp_465asocket.jpg

Eimac 3C24 Power Triode Transmitting Tubes.....$10 each plus shipping
I have two of these that are NOS tubes which are new in the box. I did check the filaments for continuity
http://members.cox.net/radiostuff9/eimac3c243.jpg
http://members.cox.net/radiostuff9/eimac3c24.jpg

Thanks for looking.

It already exists, and is called an inverse FFT.

You might also look up _Music from the Galaxies_
by Dr. Fiorella Terenzi, who used radio astronomy
data to make music. The results were interesting...

# 5333. QST mods for IC-728 please?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-11 07:16:53 UTC
From: Dave Bullock <DaveB@ihr.mrc.ac.uk>
Message-ID: <ckdc15$i3v$2@oyez.ccc.nottingham.ac.uk>
Source record: 19228

I am looking for a mythical list of mods for the IC-728 that are
mentioned as having been in QST some time ago.
From comments on the web it sounds like there are more than the two I
have found so far:-

1 general coverage modification
2 replace dial lamps.

Can anyone help please?
Thanks in anticipation.....Dave

# 5334. Sale or trade: LDF4-50 heliax

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-11 13:03:25 UTC
From: awiecek@hotmail.com

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.ham-radio.swap

- approximately 700 feet of LDF 4-50 heliax in one continuous run.
Cable has never been used
and it was stored outside for a number of years. Not willing to split
up.
Pick up only but Im willing to deliver locally. Its a very heavy spool
(Im located in the Toronto, Ontario area).
- approximately 200 feet of the same heliax in two pieces. Not sure of
the piece lengths but
please contact me and I will find out.
I will entertain offers but also willing to trade. Im looking for
things such as TS-450, TS-440 radios,
GPS equipment, APRS stuff, weather stations..etc.

I can be reached at 905-785-6010 or email awiecek@hotmail.com

Hi Laura,

Glad to hear from an YL ;-)
Indeed, as there some (>300) audio files on my website, several composers
already wrote me to get more information.
Some of them told me that they 'd like to use such recordings to create
music  la Tomita or Klaus Schultz and other "chillout" or "new age"
compositions.

Unfortunately I am not equipped for such a work but I 'd like :-((

# 5341. SWR meter and tuner for mobile HF

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-11 15:00:08 UTC
From: Mad Dog <me@privacy.net>
Message-ID: <2svli7F1pi335U1@uni-berlin.de>
Source record: 19231

I am using a 706 MKIIG in the truck and i would like to use
a HF SWR meter because the transceiver does not have a SWR
function for HF only VHF.
I am building the mobile station 1 piece at a time while acquiring
my General class license and would value your opinions on the
most practical SWR meter and antenna tuner for use on 1.8-30Mhz
A SWR meter/antenna tuner that includes 2-meter would simplify
things greatly.
I am presently using a Diamond tri-bander on the VHF side.
I have been switching beween a 20 meter and 40 meter hamstick
while monitoring the HF side and listening to the CW broadcasts nightly.
I have looked at the MFJ lineup and really appreciate a compact unit that
is both durable and rugged because i travel the country in a KW W900L.
The antenna tuner will be used to put the finishing touch on the hamsticks
and finish tune the tri-bander.
I hope i furnished enough info to base your opinions on and
thanx n advance.

You have that backward. The SWR meter only functions on ANT 1 which
is HF/50. It does not function on VHF or UHF.

# 5343. TS940S problem

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-11 17:35:53 UTC
From: Ben Bangerter <ben.bangerter@yale.edu>
Message-ID: <416AC479.B4928949@yale.edu>
Source record: 19234

Today I was just listining on 20M and the receiver audio output dropped to the ever-present noise level. I noticed that the VFO display showed seven dots (the decimal points) rather than digits. When the tuning knob is turned, the frequency display comes back and behaves normally, but after tuning is stopped, perhaps 1 second, the display reverts to 7 dots. This is in all modes on all bands. I thought it might be the battery backup for the RAM, but I opened up digital unit A and the battery reads 3.26 V, which should be fine. I have the service manual for the rig, and could find no suggestion of what the problem might be. Has anyone experienced such behavior with a TS940S?

George-

I have the older IC-706, and I'm fairly sure it has an SWR function, at least on HF.

Most VHF/UHF antennas will cover the band without a tuner.

I have found that the Hamstick antenna is fairly broad, so if you tune it for the center of 20 Meters, it should be close enough for the entire band without a tuner.

The 40 Meter Hamstick is not so broad. If you want to use it on both SSB and CW, then you will need a tuner. Without a tuner, it may cover the General Class portion of SSB, but barely. (The 75 Meter version may not cover the entire band, even with a tuner!)

Any of the MFJ small tuners should work. However, you would have to transmit full power (AM, FM or CW mode) to accomplish tuning the way it comes. Look into the "BET 706 tune control", available from AES for $33, although you may be able to find construction details on the web. This device lets you generate a low power signal for use while adjusting your SWR.

I have the Icom AT-180, which works well through 6 Meters. To me it was worth it not to have to fuss with a manual tuner, but it is a bit pricey. If I was shopping for one now, I'd look into the recent MFJ auto tuners.

The point is you don't need an HF SWR meter because you already have one. That alone should be very instructional. Antenna tuners aren't very useful for mobile use either. Use an antenna that covers the area of interest, or use a screwdriver or automatic tuner and whip. You have enough to do operating mobile without having to fiddle with an antenna tuner.

# 5353. Mod For ICOM IC-DELTA 100 Mobile

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-12 03:21:25 UTC
From: **THE-RFI-EMI-GUY** <rhyolite@nettally.com>
Message-ID: <ckfik9$qs2$1@news.utelfla.com>
Source record: 19056

Hi I am getting an ICOM IC-DELTA 100 mobile radio from Japan. I am looking for the frequency mod for this radio because it will arrive with a restricted 2M and 70CM band. I know there are diodes on the control board for various markets. Can anyone provide details of the options?

I plan to use it mobile for the FM satellites, but would like to open the rest of the US 2m allocation for repeater use..

Also interested in hearing reports about this model from others.

Thanks in advance!

If he gets a screwdriver antenna, he should also get the "ASAC" automatic screwdriver antenna controller from Am-Com but Am-Com is out of business now. Good luck finding one. This ASAC controls the antenna motor and does the hunting for proper SWR while you are driving. I had one hooked up to my 706, worked great. No it is not for sale.

# 5356. Re: QST mods for IC-728 please?

Greetings..

... I plan to use a battery charger in Europe (220V 50 Hz). I will have a Radio Shack 273-1413 (Canadian model) foreign travel voltage converter.

However, I see on the back of that device that it should not be used with a battery charger.

What is the reason for this?

Thanks de F/VE2PID

# 5358. Re: Battery charger and voltage converter

They won't work with inductive loads - the transformer in the charger,
in this case.

I spent 3 years in Germany and never found those travel converters
of much use. We very simply used a 220/110 transformer. They are
pretty cheap to get, over there, but you wouldn't want to be carrying
one of these things in your suitcase. The 50/60 cycle thing usually
doesn't bother anything but clocks that use the line frequency. Even
then some of them have jumpers to adjust things. I ran my whole station
off of one big transformer.

We mostly bought our transformers used. There was always a brisk trade
of these thing between people coming and going.

Am-Com may be out of business, but you can still get a screwdriver
automatic controller from
http://www.superantennas.com/___Products/Accessories/ScrewDriver_Controller/screwdriver_co
ntroller.html
Or a manual controller with digital readout is available from MFJ.

Subject: SWR meter and tuner for mobile HF

I am using a 706 MKIIG in the truck and i would value your opinions on the most practical SWR meter and antenna tuner for use on 1.8-30Mhz

Why don't you consider the ICOM AH-4 tuner and companion AH-2B mobile whip. They were designed to work with your rig and have received great reviews. See here:
http://www.eham.net/reviews/detail/1071

# 5372. Can anyone help, PLEASE - searching for zip-cord (aka: mono-cord, speaker wire, shooting wire, dbl hookup, rainbow cable, ribbon cable)

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-12 16:13:40 UTC
From: Striker Cat <spam1@tigerfiles.com>
Message-ID: <416c225c$1_2@news.vic.com>
Source record: 19079

Hello everyone,

I haven't been reading this news group to long so I'm not sure if it's ok to ask questions of this nature here. I'm searching for zip-cord (aka: mono-cord, speaker wire, shooting wire, dbl hookup, rainbow cable, ribbon cable) specifically looking for solid copper, 26 gauge (Smaller the better down to 28, but will settle for 24 or 22). I'm looking for brightly colored insulation, yellow, orange, red, etc. anything except for clear. My usual supplier doesn't carry it anymore the vender discontinued the product. I would like a 1000' roll, or so. I use to pay about $0.03 a foot and I'm having a hard time finding it at any price now.

Can anyone direct me to a resource?

Thanks,
Brian

PS: my email address is "spam1 at tigerfiles dot com"

Maybe the "e" in front of the word Astron - is the error! Don't know, never tried to e-mail them!

A excerpt from a previous discussion on Astrons - may or may not help.

The following items are for sale. Prices DO NOT cover boxing and shipping charges from 96002.

******NO TRADES*****

Metron MA1000B 160-10m. mobile (12vdc) amplifier in very good cond. Comes with a 300 amp...yes....300 amp!!! 12vdc P/S. No manual. Price is $800.00.

Ameritron AL-80A HF amp. Uses a single 3-500Z tube for 1000 watts PEP output. In very good cond. Full output. $550.00

Atlas 180 160-20m solid state mobile radio. Has the docking station. In good shape. Comes with hand mic,and copy of manual. $150.00.

HT package deal. Kenwood TH-415A 440 HT. Alinco ALM-203T 2m. HT. Both come with spare batt.'s,leather cases,charger's,manuals,and speaker/mic's. $60.00.

Jackson 598 tube tester. Looks good. $30.00.

Yaesu FT-990. This is the AC/DC model (has built in AC supply). Narrow SSB filter. No Manual. Comes with the hand mic and matching SP-6 speaker. Ex.cond. $750.00.

Radio Shack 5A bench model variac. $20.00

Test equipment package. Sold as a package only. Eico model 555multimeter. Knight Kit model KG620 VTVM.
RCA model WR-50A RF signal generator. Heathkit model T-4 signal tracer. Some paper work for some of the items. Untested. Price is $50.00.

I do have pics of the equipment I can email. Please email direct at kf6ikc@sbcglobal .net as I do not check the list very often. Or call me at (530)224-1136 befor 9:00pm pst.

Take care,Stan

Call 'em on the telephone.

I had good response when I had a question about a
SS-25 that started making RF noise. They said to send
it in, I did, they fixed it, no charge.

> Please respond direct. Tnx and 73, K4GJ

Virtually anything would work - whats its designation in the cct - is
it a single or dual diode - even a 1n4004 makes a reasonable single
varactor - the MV104 is a dual one, obselete but still around, Philips
also make an equivalent but would have to look it up... (its a BBxxxx
designation ) - you might need to muck around a bit and retune the
rest of the cct, but whats the alternative - scrap the radio? ........

Which HT? If copy paste works in bot applications, then it should work
between them.

Probably off topic, but...
I just finished what I believe is a complete command reference for
controlling the TH-F6... Just like the big rigs. It is just an explanation
of the radio commands for all functions.
I also use EXCEL to do the I/O. SO... Copy paste in Excel could be used to
do whatever copy and paste can do from / anywhere.

I was wondering if this would be possible also. But I suppose that if
the sample sets overlapped
and you did a lot of sets you could convert back to the original signal.
Would require a lot of
computing though.

interesting thought.

Hi All,

I have acquired a Tait T375 RX and T377 TX exciter for our repeater.
I do not have any information on this set of modules (do have the previous model), and need to change the freq. and calibrate them.
These units use the diode switching for the freq, not a change of crystal.

For one, I would like to get information on the diode setup for freq setting, then I can get onto the calibration.

If anyone could provide me with Doc or PDF files, I'd be most grateful.

I can be sent to me at sparc_man@hotmail.com

Regards

Kevin, ZL1KFM.

Kevin, Tait is made right there in New Zealand. Why don't you try to give them a call and see if they might help. I have had nice contact with their tech support while they were here in the U.S. and they seemed quite helpful in amateur radio issues. Perhaps the company will assist you?

# 5402. A broken SSB Filter or an Off frequency Oscillator ?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-15 15:52:15 UTC
From: chafik.philo@eudoramail.com
Message-ID: <cacbc942.0410150752.64c28d34@posting.google.com>
Source record: 19005

Hello
I have an IC-706 MKII, works fine on all modes except SSB:
On receive,I look at the audio spectrum analyser software, I have
found the following:
in LSB mode, most of the BF energy is located
between 1200 Hz and 2800 Hz approximativly.
in USB mode, most of the BF energy is located
between 200Hz and 1800 Hz approximatively
Fortunatly I can fix the problem by turning the IF shift knob about
-500 Hz in order
to have a normal audio quality.
(NB: the IF shift knob shifts the first oscillator and the BFO by
+-1200 Hz )
But the problem is getting worst while Transmitting since the other
station receive only the lower frequencies of my voice in USB mode,On
LSB mode
the other station receive only the Higher Frequencies of my voice
which give
a hard to copy modulation. the IF shift is not available on Transmit.
On other hand,the output power is only about 30 % on LSB and 70 % on
USB.

So, I dont know if the SSB filter is broken or that the some
oscillator is
off frequency by 500 Hz.
In the Service Manua, I did not found any way to play whith the
oscillator
or the BFO frequency.
Any Idea please.

"BO GATOR" Mobile Linear- 1200 Watt PEP
Posted On Oct 27 2003 _____ Offer ID #: 106

A well built,Competition Type Mobile Linear

A well built, Handmade, competition type Mobile CB linear.
It works on 12-18 Volts DC with a 2 to 5 watt dead key for drive.....
Using a CB radio with a 2 to 5 watt dead key with forward modulation
swing produces 1200 Watts PEP (Peak Modulation) on a Transell Peak Reading
Watt Meter.
Note: if you try to drive it with more than 5 watts dead key ,you will need
to roll back your drive power to the 2-5 watt dead key level,otherwise you
could
damage the output transistors as they don't need a high dead key drive.
The "BO GATOR" Linear Will out perform most other linears in it's class !

Note: Since this is a competition type linear,it is built without all the
extra
bells & whistles....
The basic idea of a Competition Linear is to get the Maximum Modulated power
to
your antenna,not waste it in receive preamps,meters,led's.....

The Standard model comes with an on/off switch,and a high/low power switch.
For $20 extra we can install an AM/SSB switch for delayed keying.

With 2-5 watts dead key and forward modulation on the driver,we get an
average
of 1200 watts PEP using (2) 2SC2879 transistors......And on our test bench
will
out perform most 4 pill linears.....If you would like to know how good they
work,
Ask some of the Truckers who operate in and out of this area and are running
"Bo Gators"!
Get a "Bo Gator" and do like the truckers do,they talk all over everyone
else!
Warranty.....someone ask me about a Warranty,Did you know that most Major
Brand
Linears have no warranty.......Tubes & Transistors in linear Service Have no
Warranty !
If your SWR is low and you drive this linear like we tell you and you don't
hook
it up backwards,you won't need a warranty.....it has none!

Receive Preamp: at this time we have no provisions for adding a receive
preamp

to the "Bo Gator" Linear.....

Current Draw: the standard vehicle alternator will run this linear just fine because
you will draw the most current on modulation peaks.....

Note: If you need roll back installed in your cb to conform to the 2-5 Watt dead key drive needed to drive the "BO GATOR",
send me your 40 channel cb radio plus an additional $35 in Cash/Money Order ,and I will Tune,Peak,Tweak and install the Roll Back and
ship your radio back to you by USPS.......We offer other services too!....linear repair both Tube & Transistor,Base or Mobile.
Roll back,dial a watt,talk back,cb repair,mike repair,you name it......
if it is CB related we can take care of it....just email me your needs!

That is indeed what is being proposed, however, going from time to
frequency (Fourier) looses the time distribution of what has been
transformed. It is an 'average' over some time. Once lost, the inverse
Fourier cant cet it back....I think. This is my gut feel and experience
talking rather than a mathematical Guru.

Then you agree that the French did learn something from their disaster in
Indochina. But not enough to avoid invading Egypt in 1956. Maybe the
post-grad course in Algeria was what turned them into peace-loving
post-colonialists.

Yes, the French have tried mightily to avoid foreign provocation. Why, take
Rwanda. As the genocide reached its peak in the early summer of 1994,
France's President Franï¿½ois Mitterand was reported to say, "In such
countries as this, genocide is not too important." IIRC, the French Foreign
Legion was really on a protracted African vacation in Zaire in 1978.

I cite these instances not to demean France (although I think the average
Frenchman deserves a better government than he usually gets), but to deflate
the Francophile pomposity you wear as a veneer over your hatred of America
in general and the present administration in particular.

Nothing I say will change your pickled attitude, so I'll grant you the
high-ground of a last idiotic reply.

# 5408. Liquidating some late model Icom equipment + more

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-16 03:07:21 UTC
From: Rob <europax@comcast.net>
Message-ID: <Jf0cd.266404$3l3.234272@attbi_s03>
Source record: 19010

FS-

1. Icom 756 Pro II + PS
2. Companion IC-PW1 Solid State Linear, 1kw output

The above two I am selling as a package for $3500. New would cost around $7500. These are in like-new condition.

3. Heathkit DX-100, free if you pick up

4. Drake TX-4 and R4C, sold only as pair for $300. Fair condition. R4C has Sherwood filter and front panel switch

I am selling this equipment since it takes up alot of space, and I may be moving into an apartment in the future.

Local sales only. i.e. Oregon and Southern Washington. You can come and operate the equipment to check it out, then we will box it up in the original packing. I will accept cashier's check only for the Icom. Money order or cash for the Drake equipment.

Hope to hear from you.

Sincerely, Rob N3FT

I do think that, to recover the original audio, that samples would need to
be taken at least as often as the Nyquist criterion frequency (2*fmax) for
the upper frequency of interest.

Cheers,

Basil

Icom 740 HF AllMode Transceiver With Built In Power Supply!
CW Narrow Filter FL-53
CW Narrow Filter FL-54
9 MHz SSB Filter FL-30
Has carry handle on the side.
Front looks beautiful, the top cabinet has worn paint small area.

I made a few contacts with it and GREAT reports. And it puts out a
full 100watts. The frequency display and meter lights are BRIGHT.

No worn bulbs on this nice rig. Comes with power cord, no microphone
or manual.
Transmit and receive is GREAT!! ps: You need external speaker.
Internal does not work.
Price: 260.00 Shipped to the lower 48 States.
I take paypal or postal money order.
Please reply to: ritchi50@optonline.net

<< Anyone know any suppliers carrying this sort of gear? >>

Joe-

Assuming you are thinking SSB or CW, transverters will most likely be the answer. You will also need a basic rig to connect the transverters to.

One somewhat sophisticated rig that is designed for use with transverters, is the Kenwood TS-2000. (The TS-2000X comes with 1200 MHz built-in.) Kenwood may also supply the transverters, but I'm not sure about that.

The same may be true for other top-of-the-line rigs. Of course they can get a bit pricey, but you don't have much choice if building your own is out of the question.

Does anyone know how to calibrate this meter. There are three
adjustments on the back, (10w, 100w, and 1000w).

Rocky

# 5430. Ford unfriendly to Hams - help / advice needed.

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-17 19:09:22 UTC
From: Evan Platt <evan@TheObvious.espphotography.com>
Message-ID: <eqg5n05gjl44fo2hh914gvqucglu01cb06@4ax.com>
Source record: 19032

Well, I've gone over this story a dozen times to numerous auto groups, but the attitude there seems to be "F* off", so I'm hoping people here would be more friendly.

The full details are at
http://home.espphotography.com/peninsulaford.html

Short version:

I had a 2001 Ford Taurus, and the extended service plan (warranty). I volunteer for a Volunteer Fire Department, local OES, and a large Air Ambulance. I'm also a licensed ham (KG6ESP). I had a few two-way radios in my car along with my fire turnout gear. No biggie. With 3 or more people in the car, the car made a loud rattling noise at idle. After a local ford shop looking at it, they stated the car was overweight. I could only get the car weighed with one other person in it, but my car was still over 600 pounds UNDERWEIGHT, and the 2 other people I'd carry weighed nowhere near 600 pounds. After arguing back and forth with the local Ford, they said "Too bad, we won't help you." I sold the Ford, cancelled the warranty I had paid $900 into, and they refunded me less than $500. They prorate the mileage I drove while I had the car. I told them if they claim the warranty was void, they wrongfully took my money. They won't respond. Ford Corporate sent a letter only in my response to my Better Business Bureau complaint, and e-mails and voicemails to Budco Financial (the company I paid the monthly fee for the ESP to) go unanswered. I have Return Receipts as evidence that they are being read by VERY high level people.

I want the $420 they wrongfully took from me - if my warranty was void, why did they take it? The local ford dealership inspected my car prior to letting me purchase the ESP, they said nothing about the radios, but then when it came time to fix something, they refused to.

Anyone have any ideas? Any agency I can go to or even 'namedrop' to Budco? I'll be making a long list of calls Monday to Budco, and I'd like to have an agency I can reference that has some oversight over Budco to mention. Do you think the Attorney Generals office would have any interest? Would this be a Bureau of Automotive Repairs? And who do I go after? Budco Financial? Ford Corporate? I did sue Peninsula Ford (the ford dealership refusing to do the work) and they simply said "You're suing the wrong people. All your checks are made out to Budco", and the judge agreed.

I'm not a ARRL member, but if the ARRL would help out, I'd gladly join. This is $420 of MY MONEY I consider Ford and Budco have stolen. Needless to say, I will NEVER own another Ford in my lifetime.

Thanks.

Evan

As the car did not come equiped with a ham radio, "F* off" and buy a Toyota
the next time.

Interesting, they use Ford Crown Vics here in NC for the trooper cars,
just about all leo cars are the same model.

Sounds like the heat shield for the catalytic converter could have been
loose and vibrating.

If the dealer won't work on the car they they failed to honor the
warranty.
This gets complicated because these warranty companies that cover the
repairs are like an insurance company and take the risk for the fixes
and take your money up front.

I also would go after the dealer first since they are local to you and did
not
cost you much to do it.

Try the local tv stations, they have connections and also have the
consumer advocate reporters to help and it costs you nothing.
Sometimes a little tv air time can cost the company lost business,
a lot more the the money you are out of for the worthless warranty.

good luck

When you sold the car you gave up recorse to the problem.
The car is gone, let it go, bitching time is over, you are out the $$.
Overweight is BS, the "clams" at ford were definatly lying to you. They are idiots to tell you that.
But, you could have found the rattle yourself with some friends too Not that hard.
Radios do nothing to warrenty, Fords have been the choice for Cop cars for a long time.
You were screwed by local dealer, go to corperate, keep complaining you could get some $$ back, but you may have to have a lawyer write the letters for you, for Ford to take it seriously, and that will cost over $400.
Live and learn.

I bought a Honda. But what does that have to do with anything? They
had no problems taking my money, but when it came down to honoring it,
they claimed the warranty was void.

Sorry if reading is not one of your strong skills.

Dear readers,

I was scouring the web for a QST article on modifications for an IC-728.
However I was looking in totally the wrong place because actually the
article never mentioned this transciever!
The true title was:-

OH2GFï¿½ï¿½Hot-Rod Your ICOM IC-725-Series Transceiver,ï¿½ in September and
October 1995 QST

Aparrently these modifications are transferrable to the IC-728 too...(no
wonder no one could find the article).

So....does anyone have the article in electronic form, and would you be
kind enough to email me a copy please?

Thanks in anticipation....Dave

I'm guessing "The Enforcer" is referring to the fact that when 1d10ts
post eBay auction links to some of the other rec.radio. groups and use
For Sale (when the FAQ states to use FA or For Auction), I reply
telling the person to use FA or For Auction.

Not sure what that has to do with this, just a clueless poster I
guess.

I experienced a similar issue with my new 2002 Subaru Outback.
I'm a volunteer FF and as soon as Subaru fould out about it
via the dealer service records they claimed that my Subaru was
in "Police/Fire/Public Safety" service and revoked my extended
warranty plan, and attached a statement to my VIN record station
that because I had installed "VHF/UHF transmitting equipment"
in my Subaru, all of my vehicle electronics were no longer covered
inder warranty. Nedless to say, I sold the Subaru for a Dodge
Ram and have had no problems with GM. SUBARU CUSTOMER
SERVICE ARE TWO-FACED LYING S.O.B's WHO ACT LIKE
THEIR CAR PRODUCTS ARE THE BEST THING ON EARTH.

PHOOEY ON THEM AND THEIR LYING CAR AD'S ON TV !!

TO HELL WITH THEM AND THEIR CRAP LL BEAN OUTBACK
THAT I OWNED. I WILL NEVER DO BUSINESS WITH THEM AGAIN
AND IF YOUR A HAM AND ARE CONSIDERING BUYING
A SUBARU....DON'T DO IT!!! THEY ( MEANING BOTH THE DEALER
AND THEIR CORPORATE OFFICE) WILL SCREW YOU OVER
2 WAYS INTO NEXT WEEK ! DON'T BUY SUBARU. THEY LIE AND
THEY BUILD GARBAGE.

Yes Mike I tend to agree with you about Subaru, I got very well burned on a bad transmission from them in a "SUB" wagon I had. I was just using it to go back and forth to work with.

Got kind of dumb question? Prior to the starting your rant (all caps) you stated you had got rid of the Subaru and bought a dodge ram and have had not problems with GM. When did gm start making dodges?

I doubt you'll be in any position to pursue your claim if the
car is no longer available for inspection. It's now a matter of who
said what some time in the past.

Well the issue has nothing to do with inspecting the car. I spoke with
a Ford customer service representative who stated the warranty was
void due to installation of the radios. So there's nothing to inspect
- they took my money when they 'shouldn't have' since my warranty was
void from the get go.

How much do you guys want to bet that
someplace on the Toshiba TV are those
inevitable words of warning: --> "MADE IN CHINA".

(no doubt having a UL and a CSA and an
FCC Part 15 Certification also..??)

Want to have some real fun? Try this!! (below)

If you own a "whitebox" computer [..meaning one
of those cheap cobbled-together Chinese Component
computers you get at the monthly PC show from
Hoo-Fong Voo who just got off da boat from
Chunking or Saigon], set up a Spectrum Analyzer
about 10 feet away with a rubber duck antenna
on it in capture mode. Pull off the cover of the PC
and fire the sucker up and have a look at the S.A.

It will throw off more stray RF crap than a
GE Microwave Oven or Brother RG Stair on a
rainy day on the short-wave... How the heck do these
things make it into the USA consumer market and get
sold? (most of em have counterfeit FCC and UL
symbols silkscreened on the motherboards, ever
notice that? The switching power supplies in these
things are nothing short of a firetrap also)

# 5455. Radio Shack DX-394 Index of Mods Updated

Newsgroup: rec.radio.amateur.equipment

Over 80 mods now listed plus a dozen on the To Do or Wish List. More mods than for any other general coverage receiver! Thoroughly documented.

If you like to tinker with radios, I know of no other recent model that lends itself to as much fun in this arena as the DX-394. Great platform for learning radio-electronics. Always 1 or more FA on eBay.

Active & friendly user community now with over 700 members. Some members are keen short wave listeners; others are into AM DXing and a few enjoy long wave. Many experiment with
antennas and some are ardent modifiers - customising and souping up the rig as hot rodders would do with cars. You'll find lots to interest you and help get the most out of your radio.

All here at:
http://groups.yahoo.com/group/RADIOSHACKDX394/

It has the most complete collection of modifications, usage tips, links to related websites, documentation, and photos along with a user survey and a message forum (2877 messages archived) to help you get the most pleasure and DX out of your Realistic / Radio Shack DX-394, DX394, DX 394.

Subscribe on line or email: RADIOSHACKDX394-subscribe@yahoogroups.com

Hi Richard,

I have heard that Astron is very tight-lipped about tech info for their power supplies. It isn't just Astron, however. I have a Magnetech RV converter (a switching supply used to provide 12VDC for an RV), which is rated at 55A @ 12V, which I was interested in using as a shack power supply. I emailed the company, and the only thing they told me about it was that that it would work OK without a constant load on the supply, and that all schematics, parts lists, and circuit descriptions were "proprietary information"!

Mike Harmon, WB0LDJ

Chevrolets don't, either, but I have installing radios in Chevys for 35 years and none of them caused a problem--at least none that were not able to be fixed. All minor glitches. Fords (at least during the earlier years I owned them) had too many noise issues and repair problems. So I have basically stuck with Chevy over the years as they have proven to be reliable. One car I bought in '87 lasted 13 years and 199,000 miles--and chock full of radios! LOL!

Now them "furrin'" cars I don't much cotton to. I'm still mad over Pearl Harbor. LOL! (Whoa! Don't pounce--I know all about foreign content in domestic cars, etc. I just prefer an American make made by Americans in an American plant *IF* I can get it.)

That's because Ford Fleet Sales deeply discounts the basic Crown Vic and makes it back up on the Police Package. (Actually, they break about even on the sale) To them, it is worth it in passive advertising. It, however, doesn't mean it is the better car. It was, for example, proven and published in several automotive mags that the Fords were more labor intensive. Hence, the ovewhelming dominance of Chevrolet Caprices in the NY City cab fleet for MANY years. The Chevys simply took the punishment better! Some of them are STILL out there
on the murderous potholes of NYC with 300,000+ miles on them!

During 1996 when Chevy fielded the heavy Caprice sedan, it had an enhanced LT1 V8 that the Crown Vics couldn't keep up with! It would just plainly scald the Fords and leave them in the dust! In the NC Highway Patrol fleet, troopers begged not to have to give up their older Caprices and many served well beyond the normal service life. Even today, you see an occasional '96 era Caprice serving as some State agency vehicle or DOT car.

Mustang? Forget it! For a time, NCHP had Mustang pursuit vehicles. But they were getting outrun by kids in Camaros that would literally shoot the cops the bird and walk away from them! No more! NC and SC now use Camaros to pursue speeders, and while the Crown Vics are quick for their size, they are no match for the Camaro.

Chevrolet has recently released a new version of the Impala SS. I have heard that they are going to offer a Police Package version of this car. AND it is supposedly QUICKER than the old Caprices and SS Impalas of years ago.

And I betcha you won't have much trouble with your radios in one of them either. LOL!

Jerry

Standard C468A LNIB $ 90

Standard C568A 95%+ with extended range mod. $175

Icom 02AT with wall wart.
Icom BC-35 plus extra Ice brick battery $ 65

Icom IC-229H 90% $ 85

Icom SM-8 Like new. $100

All items will include manuals unless noted.

I have a lot of older computer parts/MOBS-CPUs/boards
ect. Everything from Rll,MFM to SCSII controllers.
contact me for what you are looking for.
I have an External Scsii CdRom changer that uses Pioneer
carts.

I also have a lot of C64's 3 good 3-5 fixable or parts.
Including a SX64 portable that is fixable.
Assorted peripherals - drives,printer,parallel/serial ports,
modems, tape drive, graphics pads, joysticks, ect.
A lot of cartridges, and software - games to productivity.
Included are extra books for programming ect.
Plus software to run a bbs from the C64..

I would like to sell it all as one group. Will cost more,
if sold piecemeal....

$100 takes it all on the C64 equipment.

Shipping is NOT included

I have bought several differant kinds of the Astron linear supplies and they
all come with a schematic. They just have minor changes of the standard
lm723 type supplies. I have not seen the switching supplies so can not
comment on them. I just don't like the switchers. Not as simple to repair
as the others and some can generate RF noise.

# 5479. Question about Dow-Key DKC-TRM-1

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-20 00:38:58 UTC
From: k5dh@qsl.net
Message-ID: <faadnXg1Fes_LujcRVn-3Q@centurytel.net>
Source record: 18931
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I picked up a Dow-Key DKC-TRM-1 tube-type T/R switch. All of them that I've seen before use a 6EH5 tube. This one has a 6CB6 installed. I have no idea if it works or not. My question: Does my unit have the wrong tube installed, or did Dow-Key use more than one type of tube in this model?

73,
Dean K5DH

## 5480. what happened to AEA?

AEA failed about a decade ago. Timewave acquired the digital stuff,
TNC's and such, and another company which did business as AEA
Technology or similar, acquired the RF stuff. They used to advertise
antenna analyzers in QST, but I haven't noticed their ads in a while.
If you can't locate AEA Technology, drop a line to tech support at
Timewave, and perhaps they can give you a pointer. Also, try Goggle
at "AEA AT-300" which brings up a lot of hits.

My first TNC was from AEA, and until a recent lightning strike, it was
still working perfectly. Good company, but some bad internal politics
seems to have doomed them.

## 5486. Station grounding question:

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-20 17:00:21 UTC
From: Ken Bessler <kg0wx@NOSPAMyahoo.com>
Message-ID: <2tnjtdF22hcb0U1@uni-berlin.de>
Source record: 18938

My area is S central KS and according to other ops,
my ground condx are good. Around my house at the
corners are 8' ground rods. They are all tied together
with 10 awg insulated solid copper wire. The phone
& cable system is grounded there, too.

My Amateur ground system ties into this network
about 25 feet from my FT-840's power supply. All
station equipment (PS, SWR bridge, HF rig) is grounded
to this bus. Every connection is single purpose, I.E.,
each piece of equipment has it's own line going to
a central connection point.

The wire from this common goes to a junction where
it meets a similar line coming from my PC's case and
joins the main ground bus.

All lines near the HF setup are 1/4" braid. All lines
running to the exterior bus are 12 awg copper. The
bus is 10 awg copper.

Before connecting up this ground, TX'ing at 100w
on 20m would shut down my computer and on 17
or 10m would lock up my mouse. Now, with a good
ground (I think), everything is OK except if I go above
40w in the CW portion of 10m - then my mouse
sometimes locks up. It's a PS-2 optical mouse.

Now you know the facts - here's the question:

Is there anything I can do to improve this situation?
I'm getting out VERY well on simple dipoles & 100w
but of course, I'm greedy - I want to install an amp
and go legal limit but I'm worried my 12 awg lines
would not be enough for 1.5kw.

Any suggestions?

Ken KG0WX

This response has nothing to do with your question, but I note in your ground system description a glaring ommission; you didn't say if your antenna system was protected. Do you have polyphasors in your antenna lines before they enter the house? If not, therre is a path for lightning to find your nice ground system.... through your radios.

Dean -

The standard tube for the "stock" Dow-Key DKC-TRM-1 switch is indeed a 6EH5
http://www.n4mw.com/gdowkey.htm

The 6CB6 may have been a substitute by a former user/owner.
I have also seen a 6AK5 in some used units.

IF you plan to use or test this unit, it requires external power ~ 120VDC
(usually provided by a tube transmitter through external accessories socket)
and 6 VAC (tube filament). It should be connected as close to the
transmitter as possible.

Unfortunately RF gets both in and out of numerous parts
of the PC. Have you opened up the mouse and checked
for shielded cable, and does it connect to the PC chassis?

In the past I've added small value capacitors to the keyboard
microcontroller board to cut RF leakage. Perhaps the same
type of thing could be added to your mouse. I wouldn't
go more than .001 microfarad to avoid rounding off the TTL
signals too much.

<< Assuming you are thinking SSB or CW, transverters will most likely be the answer. You will also need a basic rig to connect the transverters to. >>

<Thanx; that's the answer I was afraid I'd get!>

Joe-

My comments were based limited experience, and knowing that the TS-2000 had some neat features for use with transverters. I was actually hoping someone would be sufficiently "tweaked" to jump in and propose a less complicated, cheaper solution.

I suspect you can do a little research and find other companies that provide related equipment. One that comes to mind is California Microwave. Also, there may be some older Kenwood, Icom or Yaesu gear that lend themselves for use with transverters. Such gear, along with compatible transverters, may be available used for much less than new gear would cost.

To get a better understanding of the techniques involved, look for an ARRL book on UHF and Microwaves. There, you may find the answers you need.

<< Does anyone know how to calibrate this meter. There are three adjustments on the back, (10w, 100w, and 1000w) >>

Rocky-

What is a Palomar 500 Meter? If it is an RF power meter, then you appear to have answered your own question.

If you are asking for a way to use those adjustments, you obviously need an accurate power meter or standard, an RF power source and a dummy load good for the maximum power.

Do you have an oscilloscope with a built-in calibrator? If you know its rated bandwidth, you can use it to measure the voltage of a somewhat lower frequency signal, to sufficient accuracy to be within about a dB. If the scope is DC coupled, you could use a DC voltage to calibrate it against an accurate DC voltmeter.

Then, the scope would be connected by a short cable to the dummy load using a co-ax "T". As long as you stay below the scope's upper frequency limit, measurements should be accurate. Just remember that you are looking at peak-to-peak voltage, which is 2.83 times the RMS value.

Hi ,

I have recently acquired a kenwood at440 tuner for my ts440S. I don't have the installation manual. I wonder do any of you have one that you might be able to scan and send me so that I can complete the install. Many thanks in advance.

# 5499. Ready for the Polls in Kentucky!!!

VOTE REPUBLICAN!

VOTE BUSH!

I'm Registered for to Vote Republican for 2004 here in Kentucky

My Dad is Registered to Vote Republican for 2004 here in Kentucky

My Mom is Registered to Vote Republican for 2004 here in Kentucky

My 3 Brothers are Registered to Vote Republican for 2004 here in Kentucky

My 5 sisters are Registered to Vote Republican for 2004 here in Kentucky

Both my Gandpa's and Grandma's are registered to Vote Repubican for 2004 here in Kentucky

My 5 Uncles and my 7 aunts are registered to Vote Republican for 2004 here in Kentucky

And I'm the only one of us that hasnt died of old age yet!

The last of them to die.....died 6 years ago! And supposedly they ALL Voted Republican in the last election too!

Figure that one out??!! LOL!

As long as BUSH WINS......Who Cares!

I would have e-mailed you direct and not wasted anyone's time with
my reply to you but you're e-mail address is make believe.
For your information, not that it is any of your business but the fellow
who was the high bidder had a problem before he sent payment on this radio.
I won't tell you what his problem was because it is none damn business.
I asked him if he wanted me to hold it for him for a few weeks. He said thanks for the
offer
but
he would not be able to pay for a few months and asked me if I could re-list it. I
told him no problem and thanked him for his honesty and a quick e-mail reply.
So I re-listed it.
So Mark, if that is your real name, now you know the story.
If you don't like my things then please don't look at them
and filter me out.

Ohhhh, touchy, touchy! When somebody continues to sell an item that has already been sold once, of course questions are going to be raised. There are too many scammers on both eBay and these newsgroups to just assume that everybody is acting in good faith. Did you ever consider something along the lines of "Relist - Buyer unable to complete transaction.". Then there would have been no question in anybody's mind. I noticed this auction the first time around as I used a 211 for my APRS rig for several years, and thought another might be nice to have. But the price went higher than I wanted to spend, so I dropped it. Had you included the above phrase in your post, or replied in a civil manner, I might have placed a bid on it. But I'm certainly not going to now! If you are going to sell very much on eBay, you need to learn what constitutes a reasonable question. If I'd wanted to "cry" about it, I'd have just turned you in to eBay's Fraud Dept. But I asked, instead.

Oh, and of course that's not my real email address! After spending years deleting the spam that accumulated each day in my Juno account (200+ per day), I quit using a valid return email address for 99% of my newsgroup postings. Only if I need a personal reply offline do I use my new free email account address.

Mark (yes, it's my real name)

# 5504. FS 1930's Antique Philco model 80 jr Radio

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-22 13:54:40 UTC
From: Mike Kulyk <mkulyk@optonline.net>
Message-ID: <Ai8ed.44710$YM4.15347152@news4.srv.hcvlny.cv.net>
Source record: 18856
Cross-posted to: rec.antiques.radio+phono,rec.radio.swap,rec.radio.amateur.equipment

This is a 1930's vintage tube radio. I have been searching the internet for info on this radio and its case style. Most Model 80 Jr's are CATHEDRAL This model 80 has a different case. This radio needs to be rebuilt. The grill cloth is ripped, I don't know the shape of the speaker. The power cord is falling apart. BUT all 4 tubes are in place. And there is SOME rust on the chassis. The case is different than all the Model 80 Jr's I have seen on the Internet. I am NOT a collector of these radios. I don't know if this is a rare model. The volume and tuning control are free and turn.

I have pictures of this radio and I would be glad to e-mail them to serious inquires.

I am asking for most reasonable offer on this radio..

Thanks

Mike WB2GLW

Mike,
dont try to clean the dial whatever you do. The numbers will wash right
off. If you need a repro of the dial, I sell them as part of the dial
business I bought. I have the cloth in stock too.
Philco made some models in several variations, and this is one of them.

I think that you misunderstand what is being said.

Ham Radio is not a "hobby"; that is a description of
CB Radio.

Ham Radio is a technical pursuit for those suitably qualified - and
the M3/CB Fools' Licensee is not so qualified - he is specifically
forbidden to build his own gear from scratch and is therefore
not classifiable as a Ham by any stretch of the imagination.

You seem to be confusing a genuine concern that standards be
maintained with undesirable emotional attitudes that you yourself
project.

I append a short article to assist you to disambiguate the Ham from
the CBer.

------ooooo-----

What is Ham Radio?

Ham Radio is a technical pursuit for those who
are interested in the science of radio wave
propagation and who are also interested in the
way that their radios function. It has a long-standing
tradition of providing a source of engineers who
are born naturals.

Ham Radio awakens in its aficionados a whole-life
fascination with all things technical and gives
an all-abiding curiosity to improve one's scientific
knowledge. It's a great swimming pool, please dive in!

This excitement causes a wish to share the experience
with ones fellow man, and shows itself in the
gentlemanly traditions of Ham Radio.

Radio Hams are qualified to design, build and then
operate their own pieces of equipment. They do this
with gusto, and also repair and modify their own
equipment.

The excitement that drives a Radio Ham starts with
relatively simple technologies at first, perhaps making
his own Wimshurst machine and primary cells. Small pieces
of test equipment follow, possibly multimeters and signal
generators. Then comes receivers and transmitters. It is with
the latter that communication with like-minded technically
motivated people takes off. The scope for technical
development grows with the years
and now encompasses DSP and DDS. There is also a great deal
of excitement in the areas of computer programming to
be learnt and applied.

The technical excitement motivates Radio Hams to compete
with each other to determine who has designed and manufactured
the best-quality station. This competitiveness is found in DXing,
competitions and fox-hunts.

-----OOOOO----

However, beware! A Ham Radio licence is such a
desirable thing to have that there are large
numbers of people who wish to be thought of
as Radio Hams when, in fact, they are nothing
of the kind! Usually such people are a

variation of the CB Radio hobbyist; they buy their
radios off the shelf and send them back to be
repaired; they are not interested in technical discussion
and sneer at those who are; they have no idea how
their radios work inside and have no wish to find out;
they are free with rather silly personal insults;
they have not satisfied any technical qualification
and their licences prevent the use of
self-designed-and-built equipment.

These CB types engage in the competitive activities
with their Cheque-Book-purchased off-the-shelf radios
in a forlorn effort to prove that they are Radio Hams.

No _REAL_ Radio Hams are deceived by such people!

# 5529. Radware DSP100 "software" Transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-23 23:38:19 UTC
From: "Michael St. Angelo" <mstangelo@comcast.net>
Message-ID: <4aOdnQS1wfn_dufcRVn-2Q@comcast.com>
Source record: 18881
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I fired up my old 486 PC and tested a Radware DSP100 transceiver.

The DSP100 was an early attempt at a transceiver with a digital IF and modulation/demodulation
stages. It was a direct conversion transceiver.,built on a plugin ISA board, with a PLL/DDS synthesizer that
drove a Quadrature Mixer. Te two outputs of the quadrature mixer fed the left and right channels of the computer sound card
which did the filtering and demodulation/modulation.

It was produced by Comer Communications in the 1980's. The hardware and software was developed by two brothers, Alan and Brian Comer.

The sensitivity was fair and the software I have has some bugs, but it was a gallant attempt at the first
generation of "software defined receiver".

Does anyone have one or know what happened to Comer communications or have any experiences with the DSP100?
I have software versions 1.19 through 1.22. Does anyone have any later versions?

73,

Mike N2MS

# 5530. No QRM?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-24 00:43:24 UTC
From: Ken Bessler <kg0wx@NOSPAMyahoo.com>
Message-ID: <2u0c59F24cpiqU1@uni-berlin.de>
Source record: 18882

I recently moved and it was an emergency (family)
move. To fund the move, I had to sell my 2 mo old
FT-857D. :-(

Last week, I saw a possible temporary replacement.
A 9/95 issue Yaesu FT-840 with FM board &
original manual. Nice wouldn't do justice to this rig.
Heck even the power cord still had the factory
kinks in it. 99.995% mint.

$250.

Yoink!

Got it home and I'm really impressed with the reciever
except in AM mode. There, it needs the optional filter.

Now I'll get to the point - I've had many rigs over the
years and ALL have recieved the TV colorburst QRM
on 3.579 & harmonics. - All except this radio!

I just tuned in to 3.579 and switched my TV on - I
barely heard a bit of QRM. At first I thought I might
be off freq so I checked the whole rig out - AM BCB,
3.922, 3.950, CHU, WWV, Gander ATC - even CB
channel 19 were dead on with maybe a 30 hz differance
between AM/USB/LSB modes.

Is it me or does this rig have something differant in it's
design? 14.318 is absolutly quiet where with my FT-857D
it was unuseable +/- 1.5kc.

Ken KG0WX

## 5531. Non-polarized electrolytic

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-24 03:31:17 UTC
From: n9ejs@yahoo.com

>are still available, and where?

Any decent supplier of loudspeaker-building-related supplies can sell
you a suitable cap. Nonpolar 'lytics are commonly used in loudspeaker
crossover circuits.

For example, Madisound (www.madisound.com) has a 125 uF 100 WV
nonpolar 'lytic for $2.35, and a 140 uF for $2.75. Parts Express
(www.partsexpress.com) part #027-362 is a 125 uF 100 WV for $2.20.

>Maybe it's your new QTH...I've never experienced the problems you cite.

I suspect that it may have to do with shielding of the radio itself, perhaps. A radio with poor chassis shielding might tend to pick up near-field emissions directly from the TV, or colorburst leakage coupled back through the AC power lines. A radio whose chassis has good shielding, and which has good filtering on its power wiring and circuitry, would be less prone to near-field pickup and would detect only the colorburst harmonics which actually reach the antenna.

I just ran a quick check here at my home QTH, and noticed something similar (and interesting). Last year, after I bought a used Ten-Tec Scout, I hooked it up to my wire dipole and used the 20-meter colorburst harmonic as a standard for trimming the frequency-display reference oscillator. The colorburst harmonic was clearly audible. However, today, when I looked for the harmonics with my Kenwood TS-2000 (on the same antenna, with the same power supply) they were rather difficult to hear, even with my color TV 15 feet away turned on.

So, there may be both pickup-path differences between radios (direct pickup vs. antenna-only pickup) and QTH differences (well-shielded TVs versus leaky ones).

All of that is probably true...I was only going by his statement:

"Now I'll get to the point - I've had many rigs over the
>> years and ALL have recieved the TV colorburst QRM"

Sounds like some type of physical change. I personally have a Panasonic 13"
color tv less than 2' from my rigs, with no similar problems.

Does anybody here have any honest-to-goodness experience with Grid Dip Meters?

I have an old Heath HD-1250, which is a solid state equivalent, and I have never been convinced that it works well. Seems like the dips are vague, unless coupling to the circuit is awfully tight.

Anyway, looking for opinions, or preferably facts, as to which grid dip meters are the good ones and why.

Thanks in advance.

So will a "made in the USA" IBM. The cover is part of the shielding.

# 5545. Yaesu FT-857D questions

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-25 00:23:30 UTC
From: "Joe S." <nobody@nowhere.com>
Message-ID: <clhh1j02ahg@news2.newsguy.com>
Source record: 18897

I am looking at the FT-857D and the ATAS120 antenna. Would appreciate any of you FT-857D owners helping me out -- thanks.

Most of my questions are about the ATAS120 antenna.

I drive a small pickup with an aluminum cap on the back. The cap has a ladder rack that seems as though it would make a good antenna mount. I could either clamp the antenna to one of the uprights on the ladder rack, or, I could attach a flat aluminum plate to the cap -- lay the plate flat on the top and run bolts through the inner frame ribs of the cap.

Here are my questions:

As I understand it, this antenna somehow tunes itself?? How does that work?

What cables go to the antenna -- obviously there's coax from the rig and I assume it needs a power cable of some kind ????

I understand if I run a tri-plexer between the rig and the antenna I can use this one antenna -- otherwise, run coax from the rig's antenna outputs to respective HF, VHF, UHF antennas -- right?

How did you mount yours? If you have photos on a website, please give me the URL.

How tall is the ATAS120 when fully-extended? Is it flexible so I could tie it down the way we did the big ol' 72-inch whips we used way back when men were men?

I'm planning to get the FT-857D, ATAS120, separation kit, narrow CW filter, and the fancy mobile mike that can be used to control the rig. What else do I need? Specifically, do I need an antenna mount, or, can I build my own from aluminum plate?

Thanks.

BF-

How tight is tight?

I think my newer GDO is the HD-1250, but I haven't touched it in several years. I also have the old GD-1B. As I recall, they do have to be coupled fairly tightly. Once you find the dip, you should be able to back away some and get a more "accurate" dip. Tight coupling seems to pull the oscillator's frequency somewhat.

It is also possible to use them in an absorption mode, where energy from an energized circuit will deflect the meter when it is tuned to the frequency. Have you tried that mode?

>unless coupling to the circuit is awfully tight.

I have one of those (eBay purchase as of a couple of years ago) and I agree with your assessment. The oscillator is fairly weak, I think, and you need very tight coupling to get a significant dip... and of course the tight coupling tends to perturb the circuit being measured.

The dip-meter attachment for the MJF antenna analyzer isn't much better.

I've heard that the James Millen dipmeter is somewhat better, but not great.

If you can manage to get your hands on a Measurements Inc. ("Boonton") tube-powered grid dip meter, I think you'll find that it's another bushel of peas entirely. It's big, a bit clumsy (the oscillator head alone is almost half the size of the HD-1250, plus a desktop power supply and meter), and it may need to have its tubes replaced, but WOW does it ever dip! I used a test coil and cap combination to test it - with the HD-1250 the dipper coil had to be held inside the test coil to couple well enough, while with the Boonton I got a very usable dip with the dipper coil 3-4" away on axis!

B&W also made a grid dip meter, with an acorn-tube oscillator (similar to the one used in the Boonton) which might be worth a look.

Keep your eyes peeled for one of these old firebottle-powered GDMs at local hamfests!

> Here are my questions:
>
> As I understand it, this antenna somehow tunes itself?? How does that work?

It's internal motor is controlled by the rig.
>
> What cables go to the antenna -- obviously there's coax from the rig and I
> assume it needs a power cable of some kind ????

Just one coax. The power and control signals are sent as RF to the
antenna. The control power and signalling pass through a duplexer.

>
> I understand if I run a tri-plexer between the rig and the antenna I can use
> this one antenna -- otherwise, run coax from the rig's antenna outputs to
> respective HF, VHF, UHF antennas -- right?

That would be a duplexer. The 857 has only two antenna ports: HF+6m and
2m+70cm. Again, one suitable duplexer and one feed line to the antenna.

>
> How did you mount yours? If you have photos on a website, please give me
> the URL.
>
On a pipe, and no, I'm sorry I have no photos. The ATAS-120 uses a
standard SO239 mount.

> How tall is the ATAS120 when fully-extended?

Not even 10" longer than when it's retracted.

Is it flexible so I could tie
> it down the way we did the big ol' 72-inch whips we used way back when men
> were men?

No it will not accomodate bending, under any circumstance beyond the
wind load of normal driving. The manual even warns you not to drive
while tuning it.

>
> I'm planning to get the FT-857D, ATAS120, separation kit, narrow CW filter,
> and the fancy mobile mike that can be used to control the rig. What else do

Anything that presents an SO239 mount will do. Just keep it grounded,
vertical and sturdy.

> Thanks.
>

I work all over the planet with my 857 with ATAS-120. You won't be
disappointed unless you expect dipole/yagi/large antenna performance.

Good luck!

There was a very useful article in a recent issue of QST about
dip meters. Anyone with a GDO should read it!

The depth and width of the 'dip' is a function of the Q of the
circuit. Some GDO's are not very sensitive, and that may be the
case with yours. If you have an oscillator coil out of an old
AM radio, put a good quality cap (mica) across it and see
how your GDO works with it. You should be able to get a
good dip with your GDO coil about 0.5" away..

From: Rick Frazier <rickf@rickfrazier.com>
Message-ID: <417CBB8C.C5BDF838@rickfrazier.com>
Source record: 18953

Joe:

At the risk of killing a possible sale down the road.... I 'll feel better having this out.

I got an FT-857 and ATAS120 last December (sort of a personal Christmas present to myself).
I mounted the ATAS120 antenna on a pipe loop (looks like a roll bar) behind the cab on my pickup.

I have used it now for 10 months, and have made some conclusions about it in my setup.

1) As many will mention, a good ground is essential. I used two braided straps to the cab from the antenna mount, plus grounded the pipe loop to the pickup box, and probably should have bonded the cab and box to the frame, because I still get some ignition or injector noise on certain bands that de-senses the receiver. Adding the two braided grounds between the mount (centered and on top of the pipe loop) and cab helped a LOT. I assume adding box and cab grounds should also help, but...

2) This antenna cannot handle high vibration. As the loop isn't cross braced, nor part of a pipe rack, it can vibrate as I drive (this is on a Toyota Tacoma 4x4). Whacking the pipe loop causes it to vibrate for about a half second. I have had to re-solder several connections inside the antenna due to vibration, particularly the one between the base and the control board that sits on top of the base.

3) It will "usually" tune as you drive, but not always. I don't recall reading a caution about this in the manual, but I wouldn't be surprised if it's in the manual, given my experiences.

4) Mounting an antenna like this with the base of the antenna at the top of the cab height makes it pretty tall. You won't be able to drive into a garage without removing the antenna (or using a foldover type of mount). I can measure the antenna height if it's not part of the specifications. Given a tall and relatively fragile antenna, you don't want to hit anything as you drive, and if there are overhanging trees and such, you will hit them. Hitting objects with this antenna will eventually cause the whip to break off. The whip is 36" long and .080 inch diameter (2mm). Unless you can get another whip from Yaesu, you will likely have to drill out the socket to use larger diameter whips, which invalidates the warranty. If you use a shorter whip (or re-use the whip after it's lost an inch or so from breaking off at the socket) it won't tune the entire 40 meter band anymore. Here in Hawaii, we have a daily net on 7.088, and this antenna won't tune to 7.088 if the whip is shorter than 35" long. A few other people have related better efficiency and/or more satisfaction with the

antenna after using a 5 foot whip to replace the stock 3 foot one. This is not an antenna that can handle being bent over to drive under low obstructions or into a garage (like a 102" stainless steel whip). If you frequent parking garages with traffic behind you, you may become unpopular from hopping out to fold over or remove the antenna.

5) I don't like the SO-239 mounting. You have to have it really tight to keep it from loosening as you drive (if you have any vibration. Perhaps on a smoother riding car or a mount that can't vibrate it would stay tight).

6) Don't expect the antenna to work well for 2 meters. The whip is 3' long. If you want to use the radio on 2 meters, stick a 2 meter mag mount on the roof of the cab. I did and the difference was like night and day. The antenna tunes well from 10m-40m, I haven't tried on 6m, but it has high swr on 2m, as it's collapsed as far as possible but still not short enough for 2m. The 857 worked, but I hate the idea of running a high SWR into the antenna if I don't have to.

I initially enjoyed the ability to move from one band to another without getting out of the truck to change antennas, but got into a habit of operating 20m on my way to work and 40m on the way home, so it's not as much of a deal as I thought to plug in (quick connect) the correct antenna for a given driving direction, and I need to get out to remove the antenna or fold it over to park in my garage anyway, so I might as well just use something more efficient to begin with. If you live in a high humidity or marine environment, see if anyone else in your area has one to see if it's affected. I was surprised at how it looked inside the first time I resoldered the motor control board. It looked like it might not live more than a couple of years here (I'm never more than 10 miles from the ocean, and we sometimes have acid rain due to living on a live volcano, so the location isn't ideal for this kind of antenna). If you tune while you're driving, and you happen to have a leaf stuck on the front of the antenna (raining outside) there's a good chance it will end up inside the unit. (Another surprise the first time I took it apart.) Maybe this is why they tell you not to tune while moving. The bottom "seal" of the "trombone section" doesn't really seal the unit, it's more of a dust cover, really.

Of course, your mileage may vary. I loved this antenna for the first month I used it, until I started having problems with it. So far, I've had to resolder the connection between the base and the motor controller board twice, have replaced the whip 4 times because they keep breaking off at the socket, and tighten it weekly (it's on a fold over mount) or it will unscrew itself and wobble.

I know a lot of people are happy with this antenna, but it really isn't worth the money for my application. I wish I had known someone locally that had one before I bought mine, it would have saved me a chunk of money. Perhaps if I had mounted it low (off my trailer hitch receiver is one place I thought about), where it would be exposed to less vibration, and not hit overhanging branches, I wouldn't have had problems with it. Oh well, too late now...

Thanks
--Rick

# 5552. Sanders Microwave oscillators data please?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-25 11:52:51 UTC
From: Dave Bullock <DaveB@ihr.mrc.ac.uk>
Message-ID: <clipek$h99$1@oyez.ccc.nottingham.ac.uk>
Source record: 18954

Hi Guys,

I am looking to identify the PSU requirements and specification for a
set of Sanders Microwave oscillators. type:-

CLC 2-4 (2-4GHz)
CLC 4-7 (4-7GHz)
CLC 7-12 (7-12GHz)

They each have an OCTAL valve base type connector on the rear that looks
as though it is a power-in socket.
There is a removable threaded cover at one end and this reveals the base
of a B7G valve, (disc seal triode?) which must be at the bottom of the
cavity as there is a large micrometer drive at the opposite end.
Has anyone any technical data on these beautiful instruments please?

Thanks...Dave

# 5553. FS: Drake DC-4 mobile power supply

> Meters?
>
Over the years, I have owned them all- Heath tube, solid state, tunnell (
probably the worst or maybe the MFJ add on kit for the 259 analyzer is the
worst), Knight, Millen, Eico. Heads above all the rest are the Measurements
model 159. You can take a 1 meter rod- hold the dipper head 2-3" away from
the center (current loop) and get a huge deflection at 150 MHz. Never saw
another meter that would do that at any distance.
I keep spare heads, tubes and coil sets in case of disaster.

That shouldn't be all that shocking. If it was a "wire" it could have been for almost anything. Remember he is a "Sitting President" with all of the crazy security that goes with the job. It could have been something to do with that. You didn't see any overt signs of security while watching the debates on TV, but I'll bet you there was plenty you didn't see.

# 5580. FT1000-D and Ham Radio Delux Interface Cable Question

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-27 01:27:08 UTC
From: John <john-1@w3zdf.org>
Message-ID: <0lutn0pmchnbjogv28amanek7nn99i4de0@4ax.com>
Source record: 18982

I want to use HAm Radio Delux with an FT1000D. My computer is an HP laptop with a 9 pin serial port, and that will connect serial in, serial out and ground to the 6 pin Din Cat connector on the FT1000D

my question: Do I need a level converter between the FT1000D and the computer or will straight thru cable work ok,.

thanks..

John

Tempo One HF works well

Hallecrafters HT-37 not used in 10+ years

Hallecrafters SX28 w/manual not used in 10+years

Hammerlund 129X not used in 10+ years

Heathkit SB 220 wired for 110 powers up have not checked output

MAKE OFFER OR WILL TRADE FOR:
2 meter all mode 25 watt min output
2 meter all mode amp 75 watt
6 meter all mode 25 watt min output
6 meter beam
as most of this equipment is VERY heavy I would prefer pickup in the Iowa City /Cedar Rapids Iowa area

Actually, the point is that you are engaging in rank speculation with
no proof, and assuming that it is so because you want it to be so.
That's not a very smart thing to do is it?

No. Instead I'll listen to a bunch of bs spewed by people on a NG that keep changing their identity. Without a doubt THEY are much more credible.

Now run off and join the rest of the flock.

Don

My problem is that I have an Icom 706 MK-II, that won't power up.
When I push the power button I can hear a relay click in the radio,
and a thump in the speaker but that is it. I've checked the fuses
internal and external all are ok. Does anyone have any suggestions as
to a fix this problem.

Thanks in advance and 73's

# 5601. trouble with dx-440/sangean 803a

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-29 00:45:15 UTC
From: ulpilotsc@aol.com
Message-ID: <20041028204515.25764.00003020@mb-m07.aol.com>
Source record: 18802

I have a blown transistor in my sangean 803a (actually radio shack dx-440). It is a small transistor (number Q307 on the board), on the small audio board that connects to the batteries and the wall adapter socket. The only markings on the transistor are 808 (across the top), and F E1 across the bottom. Tracing the circuit paths I figured out the is a PNP transistor, and because it connects to the NEC C1316C audio amp, I figure it is some type of AF transistor. The problem is, I cant find a description of it anywhere, and I dont know what a suitable substitution for it would be. If anyone has any information on what I could use as a substitute, I would be much appreciative. I know this transistor is the problem, because part of the back and top sectioin of it is missing (its what happenes when you plug a dx-440 into a wall jack with the wrong polarity). The radio clock runs, and I can change channels, etc. I just cant hear any sound from it. Help! If you have an old blown up dx-440, I would love to have q307.... hahahah.

-m.

What'cha got, Tony? I've got a couple of old 386 laptops here...
One's a Zenith Bull with VGA monochrome LCD screen, takes full sized 3
1/2 inch hard drives. Also have a Toshiba T-1000 (I think) with EGA
plasma screen. This even takes full sized ISA expansion cards. Both
are sitting around gathering dust.

Source record: 18805
Cross-posted to: aus.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi All,

I am after some information on the Tait T-377/PA/03 module.
This is fed by the Tait T-377/EX/02, via RF sense, and the main connections coming in the back are 2 sets of power connectors, as well as a single white wire.

The problem is I can not find any reference on what the white wire does, there is no extra connection to the exciter. First thinking was the wire was a RF sense to the exciter if there was a problem. Does not appear to be this.
The only thing I can think it is, is a power control switch????

Does anyone have any information on this module, and this wire??

I am currently waiting for the manual to arrive, from Tait, but would like to get most it working. It is very much like the other Tait equipment I have, so I can get 90% of it working without the manual.

Regards

Kevin.

I've got a Panasonic Toughbook CF-47, 366MHz, I think 128MB RAM, CD-ROM,
Floppy, 13.5" Active Matrix display. It was a fixer-upper, but now runs
fine, running XP Pro right now. Only bad cosmetic issue is that it's missing
the cover for the battery compartment (been watching ebay for one).

If you cannot readily get software which will run on it, it gets a lot
less useful. Current software will not run on any computer before a
certain level. Many machines get tossed because of this.

If it does not have USB ports and the ability to run 98SE or later,
you lose the use of USB peripherals.

Drivers for newer deviceswill be an issue as well.

Happy trails,

Yes, I understand very well, which is why I was trying to get a feel for
what the OP is looking for. I have some Pentium 100s and 150s, which are in
a whole different league than 386s and 486s. To me they are all "junk," but
perhaps the OP wants to run DOS or Win95, in which case a P100 is perfectly
usable. OTOH, maybe he thinks a P3 is "older!"

>
In a corporate environment, this is all very clear cut.

The IS department will say that they will not support any machine
below X, and anything older needs to be upgraded.

Too bad there is not a legitimate avenue for people or organizations
who stop using older software to transfer it to someone new. This
would really help a lot of non-profits, who get donated hardware, but
have no way to get compatible software.

For example, how much would it cost a software maker to stock the
latest Win 95 version of their software, perhaps with no expectation
of support?

People are forced to either pirate old software, or throw away
completely functional older machines.

The older machines with older software are just as useful as Day 1,
even if they do not have the "latest greatest" features. There is a
large market of non-profits, volunteer organizations, and families
with lesser income who would be thrilled with this.

Happy trails,
Gary (net.yogi.bear)

Standard C468A LNIB $ 90

Standard C568A 95%+ with extended range mod. $175

Icom 02AT with wall wart.
Icom BC-35 plus extra Ice brick battery $ 65

Icom IC-229H 90% $ 85

Icom SM-8 Like new. $100

All items will include manuals unless noted.

I also have a lot of C64's 3 good 3-5 fixable or parts.
Including a SX64 portable that is fixable.
Assorted peripherals - drives,printer,parallel/serial ports,
modems, tape drive, graphics pads, joysticks, ect.
A lot of cartridges, and software - games to productivity.
Included are extra books for programming ect.
Plus software to run a bbs from the C64..

I would like to sell it all as one group. Will cost more,
if sold piecemeal....

$100 takes it all on the C64 equipment.

Shipping is NOT included

has anyone converted a tube vhf (2 meter) fm transmitter to work on lower freq.? maybe 50+ mhz ? altering the coil sizes from the variable tuner should do the trick, by watching the freq. counter output? ;)

First thing to check is the power supply. Check the voltage at the
radio power input. Check all wiring to make sure it can handle the
current. Make sure no loose connections in the wiring, or connectors.
If the radio see's a large voltage drop on startup, it will do what
you see. Also, if the voltage or battery drops to a lower than normal
level, the radio can "cycle" on and off, on and off. MK

all the wiring are ok
I think I have shorted the 8V output from TRX to
the Ground from the PC sound card.
If the internal 8V regulator is burned out,
what compounents shuld I replace?

# 5629. Please help: Shorting 8V ouput to Ground!!!!!

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-30 16:27:30 UTC
From: chafik.philo@eudoramail.com
Message-ID: <cacbc942.0410300827.4ee52459@posting.google.com>
Source record: 18831

Hello
My problrms with IC706 MKII are endless!!
I connected by accident the 8V ouput in the rear of TRX
to the Ground from the PC sound card!!!
Now the TRX is QRT.
Now Icom 706 MK-II won't power up.
When I push the power button I can hear a relay click in the radio,
and a thump in the speaker but that is it. I've checked the fuses
internal and external all are ok. For those who are familiar with
ic706MKII internal,
I made the followings measurements at the PLL unit
where the Internal 8V rehulator is located:
At the output of IC3..... 8.1 V
At the base of Q51 ..... 3.1 V
At the collector of Q51 ..... 2.32V
At the emetter of Q51 ..... 2.31V
At the collector of Q45 ..... 13.8V
At the emetter of Q45 ..... 0V !!

Because the Q45 is not SMD,I replaced itwith new one
But the problem stil exist.
Does anyone have any suggestions as
to fix this problem.

# 5630. Re: trouble with dx-440/sangean 803a

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-30 18:00:04 UTC
From: fmmck@aol.com
Message-ID: <20041030140004.11378.00002726@mb-m15.aol.com>
Source record: 18832

<< I have a blown transistor in my sangean 803a (actually radio shack dx-440). It
is a small transistor (number Q307 on the board), on the small audio board that connects to the batteries and the wall adapter socket. The only markings on the transistor are 808 (across the top), and F E1 across the bottom. >>

Mark-

Q307 is a 2SA695D/E, according to the Radio Shack DX-440 service manual. It is PNP as you assumed.

Looking at the 2SA695 from the wire end with the flat (marking) side up, Base is on the left, Collector is in the middle and Emitter is on the right.

From the manual's voltage chart for Q307:

Base 8.21 volts FM/AM/SSB+CW
Collector 8.92 volts FM/ 8.93 volts AM/ 8.92 volts SSB+CW
Emitter 8.94 volts FM/ 8.95 volts AM/ 8.94 volts SSB+CW

In case replacing just Q307 doesn't fix it, you may be ahead by replacing the entire PCB. Such damage may have affected other parts as well. Good luck on finding a junk unit.

# 5631. Re: converting vhf tube transmitter

Newsgroup: rec.radio.amateur.equipment
Date: 2004-10-30 18:31:41 UTC
From: fmmck@aol.com
Message-ID: <20041030143141.11378.00002729@mb-m15.aol.com>
Source record: 18833

<< has anyone converted a tube vhf (2 meter) fm transmitter to work on lower freq.? maybe 50+ mhz ? >>

SEF-

For that particular equipment, you need to know the approximate crystal frequency and multipliers used in subsequent stages to get to Two Meters.

For example, suppose it has a 6 MHz crystal (Output frequency divided by 24). If the oscillator stage is followed by a doubler to 12 MHz, followed by a doubler to 24 MHz, followed by a doubler to 48 MHz, followed by a tripler to 144 MHz, then you might remove the last tripler and connect 48 directly to the output stage and retune. In this case, the crystal would be changed to output frequency divided by 8.

Another multiplier chain scheme that may be easy to change uses an 8 MHz crystal, 8-24-48-144. In some cases the last multiplier might need to be converted to an amplifier to provide sufficient drive to the output stage.

There are other multiplier chains that would be more difficult to change, such as 6-18-36-72-144, but you should see what is needed. You would need to change coils or capacitors of stages that had to be moved to a different frequency range.

Most equipment has test-points to be used for alignment, where you use a volt meter to tune previous stages for maximum output. When you change a circuit's range, it would be a good idea to use some kind of absorption wave meter such as a Grid Dip Meter in absorption mode, to be sure you have the right multiple.

Sometimes a counter will respond to harmonics, so you wouldn't be sure what the actual frequency is until the conversion is complete and output stage's filters are tuned.

Another thing to consider is that FM modulation is affected by the frequency multiplication ratio. If you changed from 144 to 50, you would end up with one third the deviation, so you would need to add audio amplification to boost it.

Good luck.

73, Fred, K4DII

First of all, Howard IS going to Sirius Jan. 2006. You can get Sirius equipment cheaper online. If you buy from Sirius Direct, you can get a PnP unit plus your choice of home or car kit (which is the docking station, power cords, antenna and cables) for $50. Just go to www.sirius.com, click on get Sirius and click on Sirius Direct. When it asks for a promo code, use 456 and choose the PnP unit you want. On the next page when it asks for your referral ID, use "siriusbackstage". All you have to do to get the radio at this price is prepay a 3 month subscription which is $38.85. Not a bad deal!

I'm in Newfoundland and have both XM and Sirius. XM's coverage here on the island is really really bad but Sirius is perfect. In Ontario, you'll have good luck with either, except in downtown areas. Right now there are no terrestrial satellite radio repeaters in Canada. Both Sirius and XM have plans to put some up, many in Ontario, once the CRTC approves their licence application. You will lose the signal if you cannot see any of the satellites, so if you are behind tall buildings, you will have a tough time on XM. Sirius' sats use a different orbit which place them higher in the sky, allowing them to get overtop of buildings better than XM, so you'd have slightly better luck with Sirius. However if you're planning for mainly in home use, XM is a bit easier to receive at the house, due to the signal coming in from lower on the horizon, through the windows rather than from straight up.

There is a Sirius PHP web board at www.siriusbackstage.com, and there's also a new satellite radio newsgroup that just started a few days ago at alt.radio.satellite so feel free to field some questions there, too.

Hi all, I have the following for sale/trade

Approximately 700 feet of LDF 4-50 heliax in one continuous run. Cable has never been used and it was stored outside for a number of years. Would prefer not to split up. I'll throw in a couple of connectors (not brand new).
Willing to ship to anywhere in Canada/USA from Toronto, Ontario. Buyer pays shipping - this puppy is heavy, around 150+ lb.
I will entertain offers but also willing to trade. Im looking for things such as TS-450, TS-440 radios, LF listening equipment, 2m yagi antennas, GPS equipment, APRS stuff, weather stations..etc.

I can be reached at (905)785-6010 oe email.

Source record: 18843

Forsale:

Yaesu FT-8500 VHF/UHF Dual Band FM Transceiver

This is a very nice Yaesu FT8500 VHF/UHF Transceiver. The Transceiver outputs 50/35 watts on VHF/UHF. The transceiver is able to access Bay Area Repeaters with good audio reports.

The transceiver comes with a FS-10 Hand Microphone/Controller, Mic. Holder, mobile mounting bracket, Operations Manual, Power Cord, associated hardware(fuses, screws, etc...) and original box.

The chassis and front panel are in excellent condition and looks very nice. The mounting bracket has some rub marks on one side but other wise looks good. The FS-10 Controller is in excellent condition except for the mute button which is worn on one side edge.

No warranty is implied(As Is) but is guaranteed against DOA. I will ship upon receipt of a money order or cashiers check for the winning bid amount plus shipping and insurance. Personal checks require a 10 day wait to clear.

From: Ken <gold@nucleus.com>
Message-ID: <418642A2.7010201@nucleus.com>
Source record: 18846

Up for auction, a CBS Audimax Automatic Level Control/Limiter. This the the rarer stereo unit, model 4450A, serial number 5923 A one owner, one installation unit , excellent original condition, used in a standby capacity with limited use. It is a 19" rackmount unit,discrete, features individual controls for input and output for both channel,test bypass,analoge metering and barrier strap connections on the rear. It has a range of +9 / -14 decibels, so a total range of nearly 25 Db. These were developed to compete with Universal Audio,Gates ,Innovonics etc and can really move the audio to the front of the speakers. Studios have been discovering these as very useful compressors for the grunge,rap and new rock sound, capable of huge crush with no side efefcts. These also work superbly for any LPFM or AM or Shortwave setup. Low reserve,sold as is due to age,winner responsible for payment within 7 days by cheque,money order,bank draft or paypal. If by Paypal, buyer is responsible for all fees. If you have any questions, please ask before bidddding but bid with confidence. Winner also have the opportunity to purchase a 4440 mono unit if interested. Happy Bidding

I have fixed the problem!!
The Q45 was burned out.
But when I was trying to put a new one,
I was putting it the wrong way!!!
So to All the owners of IC-706MKII:
If you short the pin1 to ground,
replace the big transistor Q45 located
at the PLL unit.
Thanks to everyone who did his best to help me

My fellow hams,

I need a FULL manual for a Knight T-60 transmitter, including the assembly instructions. I checked the BAMA, and they only have the operating instructions. I have pages 1 through 18 and the schematic, but I need the missing pages (19 through ???). Could you copy your manual and snail-mail it to me? I'll be happy to cover your copying and postage costs. You can scan it and email it if you like, but making a Xerox copy might be less work. Your choice.

Thanks and 73,
Dean K5DH

> Is it legal to modify your Kenwood to transmit on that frequency? From a
> technical standpoint, is it worth it?
>

From a practical standpoint, I found it is. I used my modified HT as a test tool hundreds of times instead of hauling out my IFR. It saved me, my employer, and my customers a lot of time over the years.

Incidently, my HT was capable of transmit low power at 30 milliwatts level, which was very useful plus kept the signal from going far.

FS: I thought it was sold but the guy had to drop out. Relisting my very clean and fully operational Johnson Invader 2000 2kw transmiter, SSB, AM, CW. With manuals, I'll pack, you ship. Includes extra finals, $1000.

# 5668. Heil microphone driving IC-735?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-04 00:59:25 UTC
From: Larry Gagnon <lagagnon@fakeuniserve.com>
Message-ID: <pan.2004.11.04.00.59.25.482200@fakeuniserve.com>
Source record: 18770

I recently purchased a slightly used Heil Goldline GM-5 microphone, attempting to use it with an ICOM 735 transceiver. I have read Heil's web page about the Icom 735 -15dB down on its internal microphone preamplifier compared to many other radios.

I can only get the GM-5 to drive my IC-735 effectively if the MIC GAIN is 100% open and the COMP LEVEL is up as HIGH as possible. I am getting very good audio reports compared to the default ICOM HM-12 handheld microphone, but the Heil GM-5 is not driving the rig very hard and power output is quite reduced compared to the HM-12 mic. Has anyone out there had a similar experience and if so any suggestions on what I might do to improve the driving ability of either the rig or the Heil GM-5?

Hello,
I have the following item for sale:

Kenwood TMV7-A mobile dualband radio in *MINT* condition-less than
15 mins total use on the radio. All accessories included. Everything
works
perfectly, transmit, receive, display, etc! This radio looks brand
new, no scratches, etc at all on the unit itself or on the display
face! If
you want info on the radio, here is a link to Kenwood's web site:
http://www.kenwood.net/products/index.cfm?AMA=open&ama_mob=open&radio=TM-V7A&selection=Ama
teur&ID=25

I am asking $300 and it includes S/H anywhere in the continental US.
Price is negotiable so feel free to email me. Thanks.

# 5672. Morad BC-7501 Transceiver

That preamp (which never worked real well) has been out of production for a long time. The Goldline mic. was never designed for the older Icoms. I think you're honked. Drop a line to Bob Heil at Heil.com. He'll give you the straight skinny. I believe there is actually a lot of valuable information you might want to look at, on his website www.heilsound.com

The Heil "iCM" electret mike is the model they make for pre-PRO Icoms.
It has the extra output the older rigs require.

You may want to email the Heil people about using the Goldline with
the 735; they may have suggestions.

Even a very cursiry look on Google for "Radio Astronomy" led me to this page:

http://www.nitehawk.com/rasmit/

Ther are a lot of interesting links there to other Amateur Radio Astronomy
sites. You will probably find plenty ot keep you busy there ;)

Remember Google is you friend ;)

But if you're talking about just the antennas, then
rec.radio.amateur.antenna might be the most useful place. If you've got
hardware matters (as in electronic hardware related to radio),
rec.radio.amateur.homebrew might be a better place.
rec.radio.amateur.space might be of some use, though much of it
is about satellite work. If moonbounce is discussed there, some of
the discussion might be appropriate.

Radio Specialty Model 1179-22-1 Repeater $ 50
Appears to be complete, minus crystals.
I have no way to verify operation.
Has 2 settable PL tones...
Outside of case is scuffed,
but inside is very clean!
NO documentation or info...

Standard C468A LNIB $ 90

Standard C568A 95%+ with extended range mod,
and extra hi gain whip. $175

Icom 02AT with wall wart.
Icom BC-35 plus extra Ice brick battery $ 65

Icom IC-229H 90% $ 85

Icom SM-8 Like new. $100

All items will include manuals unless noted.

I also have a lot of C64's 3 good 3-5 fixable or parts.
Including a SX64 portable that is fixable.
Assorted peripherals - drives,printer,parallel/serial ports,
modems, tape drive, graphics pads, joysticks, ect.
A lot of cartridges, and software - games to productivity.
Included are extra books for programming ect.
Plus software to run a BBS from the C64..

I would like to sell it all as one group. Will cost more,
if sold piecemeal....

$100 takes it all on the C64 equipment.

Shipping is NOT included on any item(s).

I'm looking for a custom IC marked 528 55178 it's used in a motorola S1344AAB Frequency Counter/Auto Tune Deviation Meter. The Motorola part number is 51-80329A60

In the early 70's the unit was Manufactured by Systron Donner for Motorola. Systron Donner's model number was SLN6407A-75. They also manufactured a frequency counter model 6252 that is identical to the counter section of the 1344AAB

The chip is a counter/latch with tri-state outputs. I was able to Identify some input ie clock and output enable carry. But the other inputs are unknown.

> straight up.
>
Their satellites are in a 24 hour orbit, but not in the usual
geostationary orbit. They have 5 or so satellites tracing what
looks like a figure 8 path in the sky, 2 or so are pretty much
overhead the USA at any one time. Elsewhere in their orbits
they go silent and just recharge their batteries. This means
that there is less tall building shadowing, and they didn't have
to fight for space on the usual geostationary orbit.

Message-ID: <vY6jd.30581$OD3.1516807@news20.bellglobal.com>
Source record: 18656

They have 3 satellites. And the orbit on the polar inclined ones is a
very clever configuration. I guessing it's cycle that causes the bird to
pass north to south while North America is facing the path, and as it's
now passing south to north, the planet has rotated about such that the
western hemisphere is facing it yet again.

I just picked up a Roady2 at Target yesterday, it was 129.99.
I activated it online and have been listening to it quite a bit.

XM has a lot of self promoting commercials for a supposedly
commercial-free service.

The fidelity on XM is restrained at best. Some streams are outright
mushy sounding. (the audio is wired directly to the amplifier.)

There is a lot of selection, but the quality is not even as good as
local FM broadcasts.

An just to keep this as an on topic posting, the Roady2 XM radio is
mounted right beside the control head of my Icom 2720. :)

Cheers!

Date: 2004-11-06 16:30:38 UTC
From: Rob <europax@comcast.net>
Message-ID: <O_6jd.4940$5K2.961@attbi_s03>
Source record: 18655

8877 Homebrew Amp

1. 5kw power supply, stepped startup,
relatively compact but weighs over 100lbs

2. Seperate amp deck. Compressed air in
chassis up through 8877 and teflon chimney
2 vacuum variables, B&W 852 Tank Coil/Band
Switch. Grid trip, 3 min timer on startup.

NOTE- Is unfinished, needs 2 turns counters
OR use the parts for your own amp design. The
sum total worth of the parts is probably 3x
more than I am charging for the whole amp. LOL
Still, the amp was in operation up until 2001.

Cost $500. Local pickup only OR/WA
location: Hillsboro, OR

Sincerely, Rob N3FT

# 5705. 6 Meter Interference caused by TV Channel 2.

Iï¿½m experiencing some strong interference across the 6 meter band which I believe is coming from a local (within 40 miles) TV channel 2. Where can I get a filter to deal with this? Is there a low pass filter with a cutoff at 54 MHz? I only work SSB and CW on 6 so Iï¿½m only interested in the lower portion of the band, if I cut off 52 MHz and above that would be fine by meï¿½..

Source record: 18661

The most likely cuase is that your receiver front-end is broad enough
to pass the TV2 signal through the RF amplifier, and modulate everything
else being received.

It's difficult to get a low-pass or high-pass filter will a sharp enough
cut-off to do much good. Better solutions are to build a notch filter for
the TV2 video carrier at 55.25 MHz (using a T-connector and a length
of coax trimmed to length, or to buy or build a passband filter for
50-52 MHz.

I had this problem with channel 11 and a 220 MHz receiver, and ended
up building a bandpass filter with a pair of coupled LC tanks, tapped at
50 ohms. Totally eliminated the TV cross-modulation problems.

Source record: 18663

<< I’m experiencing some strong interference across the 6 meter band which I believe is coming from a local (within 40 miles) TV channel 2. >>

George-

What is the nature of your interference, and what type of equipment are you using? Can you observe anything in the interference that can be corelated to audio or video activity on the TV channel?

I live about that distance from a channel 2 TV station. Although I don't have a beam, I have never had any trouble that could be blamed on the TV station. In addition to SSB, I operate on several FM repeaters with output as high as 53.330 MHz.

I have used a Kenwood TS-670, TS-690 and Icom IC-706, both mobile and at home with a dipole. Their front ends and IF filters seem to be quite adequate to reduce the TV signal, even when driving closer to the station.

The only problems other than from occasional power line noise, has been when driving past establishments with computerized cash registers or test equipment. Once I received interference from an experimental radar system that overloaded the front end of the IC-706. It generated intermodulation spurs about every KHz, corresponding to a pulse repitition rate of 1000 pps. In all cases, the interference subsided after driving away from the source.

Hi all,
A Scout dropped by here last night with a dead FT-10.
It appears to be not working.
Checked it with my battery and still no "turn on".
Anyone know if there is an internal fuse?

--
Best Regards, Frank

1) Where can one buy a passband filter for 50-52MHz?

2) When talking about coax trimmed to length, are you talking about a
coax stub? Such as cut to 1/4 wavelength of the offending freq? If so
would be ends be shorted or let open? never worked with stubs yet....

# 5718. Help on Sunair GSB 900 DX Transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-07 18:20:08 UTC
From: moody1951@aol.com
Message-ID: <20041107132008.07662.00000272@mb-m01.aol.com>
Source record: 18670

Help. How does one get the Sunair GSB 900 DX transceiver into the transmit mode? My instruction say attach a 50 ohm resistive load (I used a dummy load), set mode switch to "A", turn and peak XMIT knob (microphone adjustment) while speaking. Some kind of indication is suppose to be seen in the meter. I see none. Microphone trips TX/RX relay okay. I understand that this radio is a broadband set (Like the Central Electronics 100V and 200V), but doesn't it need a filament warmup and a plate on step? Radio has a "KW Control Unit" inserted on the front. It has push switches for "Filament On" and "Plate On." Are these controls only for the 910 or 925 (automatic) antenna tuners via the auxillary plug? Or do they need to be executed manually (in this case without the tuners)? Like filament on for 15 mins, then switch to plate? I'm using this radio for the ham bands only and would appreciate any help I can get to solve this mystery. The only other possibility is: I'm doing what I'm suppose to do, but the radio has no output. Help.

Don't know where you can buy a passband filter. Maybe be able to find some cavity type filters for 50 MHz, but probably only surplus. Building from scratch
is easy but takes a network analyzer to tune.

A coax stub can be either open or shorted, your preference. Cheapest way is to
start with an open stub slightly too long and trim it to length. If you can borrow
a signal generator and power meter, then you can tune it that way.

It's practical to get about 25 dB of loss with a stub, better is difficult due to losses
in the conectors, cables, etc.

Rough length of the open stub would be 1/4 wavelength at 55.25 MHz, about 1.35 meters. Accounting for coax velocity factor of 0.66, the stub would be about
0.89 meters long. Start a maybe 5-10 CM longer than that and trim to length.

You may achieve -25dB loss at CH2 video, but unfortunately you will also
have high loss at 50MHz, and a VSWR that is out of sight.
Build one and see for yourself.

We're interested in finding a couple of lowest cost possible walkie talkies
that don't require a license, something we could carry around when we go out,
in case we lose each other in the mall or something. Does anything like that
exist? Does it come in 900 Mhz or what?

Well, probably true. Don't transmit through it! The computer with the
shorted-stub
spreadsheet on it is broken, so I can't look at the loss vs. frequency. It's
a simple
Excel sheet that models the complex transmission-line equation (including
loss)
of the stub against the feedline. Hoped it wouldn't be that bad at 10%
separation,
but am flying blind until I can get access to it and run the numbers.

Take a look at the FRS (Family Radio Service) walkie-talkies. Those are what most folks are using today for the application you describe. They can be found at Radio Shack, Home Depot, Wal-Mart, etc. They operate in the mid 400 MHz band.

You would probably want to look at the Family Radio Service. The radios operate in the 462 MHz range. There are several restrictions on the radios, such as they must be non-modifiable, the antenna has to be a permanent part of the radio and they can not transmit more than 500 mW.
You can find them at almost any store, such as Wal-Mart, K-Mart or Target. If you do pick them up, watch if you get the new FRS/GMRS. These radios allow for the higher power output for the General Mobile Radio Service. However, you need to have a license to operate with the higher power.

You can try FRS (Family Radio Service) radios. They are very small and perform well for the purpose you require. They can be bought new for around $10 each. For more info on these, visit:

http://www.frs-usa.com

You can also use the newer MURS (Multi-use Radio Service) radios. They are VHF radios that use 5 of the VHF business band frequencies. Radios are bigger than FRS, but they do have removable antennas and higher power output. You can get much greater range with MURS. For more info on these, visit:

http://www.murs-usa.com

Both FRS and MURS are license-free services. Try FRS first and see if it suits your needs. If not, you are not out of much money. MURS will cost about $75 or more per radio.

So you get a crystal cut for the channel 2 carrier frequency, and find
a place to connect it in the receiver chain. This sort of thing was done
apparently in repeaters forty years ago, to keep the transmitter out of
the receiver. I do think one would have to modify the receiver because
the crystal might not be able to handle the transmitter signal.

I have a new ft7800 radio with low tx audio.
Can it be turned up?
If so how?
Thanks

# 5735. Re: 6 Meter Interference caused by TV Channel 2.

Newsgroup: rec.radio.amateur.equipment

Source record: 18687

OK. got access to the spreadsheet. Setting the stub+short+connector loss
to 0.25 dB, and cutting the stub for 55.25 gives about 15 dB loss at 50 MHz,
and about 30 dB loss at 55.25. This probably is good enough to either
prove or disprove the hypothesis about what is causing the problem (video
carrier overloading the RF amp), and an inexpensive way to find out.

As a long-term solution, a bandpass filter would be easier provided it had
loss low and SWR (so it could be left in-line for transmitting).

> Help. How does one get the Sunair GSB 900 DX transceiver into the
transmit
> mode?

The GSB-900DX won't go into transmit unless certain pins on the rear 36 pin connector are jumpered. I can't remember right now which pins and I'm on the road so can't look at mine.

> I understand that this radio is a broadband set (Like the Central
Electronics 100V and 200V), but doesn't it need
> a filament warmup and a plate on step?

The GSB-900DX is about as far from those 2 radios in quality as you can get..... it's all solid state, no tubes... so no filaments are in there.... those controls are only active if you are using it with the Sunair KW amplifier...

# 5757. NOS Porcelain feedthrough insulators

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-09 18:07:05 UTC
From: ljl160@netzero.net
Message-ID: <ad4e1371.0411091007.37de05b7@posting.google.com>
Source record: 18609

FS: NOS 2 piece porcelain feedthrough insulators. They take 3/4 inch chassis hole. Excellent for linear amps, tuners, hv supplies,mounting components,and for making balanced line window feedthrough plates. I have a photo. These are very handy when you need them but I have too many in my parts collection.
24 insulators priority shipped for $30.00. 73s Lew /K1NDV

You're right, we Americans no longer care about the rest of the world. When we did, by feeding them, fighting for them, helping them rebuild, etc. The rest of the world crapped on us. Twice in the last century we had to save the damn Europeans in two World Wars. We give and give and give to countries starving and in need. We send our forces to restore peace. We help in earthquakes and famines.

So since we have always helped Europe and now Europe turns it back on us when we are in need, screw you all. Have a nice time fighting World War III by yourselves. We'll sit that one out thank you.

I own a HP 8505A RF Network Analyzer and I'm looking for application
software (Basic Measurement Program, Accuracy Improved Measurement
Program,ï¿½) to run on a PC with a National Instruments GPIB-PCI card.
Visual Basic Project (vbp)-files (VB5) are also welcome.
LabWINDOWS applications to control the instrument do interest me.
A list of common commands and queries for the device or any other
information would be grateful.
Could you help me with any information or software ?
I appreciate your effort to help me.
Kind regards.

I for one send my appreciation to your PM, Mr. Blair. But from what I hear
of the British press it is not a popular position. So don't be so surprised
when ''the colonies'' don't take you folks too seriously.

No, a license is not required for the MURS service. It is a license-free
service like FRS.

Andy,

Try a CB repair shop. Any shop that does repair work will typically have a "boneyard" of dead radios in their back room or storage shed. A good bet would be a shop located at a truck stop on the interstate. When a trucker's CB quits, they usually just buy a new one and abandon the old one at the shop. Sometimes the dealers repair and re-sell them, but often they just toss 'em on the pile.

73,
Dean K5DH

Hello,

I will be celebrating my 50th anniversary as a ham shortly. To commemorate the event I am trying to duplicate my original station which consisted of a Heathkit AT1, Heathkit VF1 and a Hallicrafter S-85.

So far I have managed to find a VF1 and the S-85. I am still in search of an AT1. Is there any chance anyone can help me and/or send me in the right direction?

I would certainly appreciate any help you can offer me.

Thanks and 73,

Bert W1DFU

Check the rec.radio.cb group..... that is a better bet! I have to look, I "may" have a similar radio for parts, not sure. As the other poster said - most shops have a bone yard of CBs. I do as well for CBs, VCRs and other items, but can't remember all the radios tossed in. As far as buying some of those parts new - though it may not be impossible - it can be tedious. There are Smeters to be had - new - out there, but you have to make sure they'll fit physically and so on. Not all are created equal. You may or may not be

able to get all parts in one place. In the case you can't, man those shipping charges could rack up! And some places want minimum orders. Hopefully, you can find a radio chassis to fit your needs. I'll look around here to see what is here.

I can't recall at the moment what type of "Channel" display they used, I'm thinking a small PC board with a dual display - perhaps a couple other components and a flex circuit strip coming from it. IF it is "just" the dual display, you should be able to get that. I don't know how you're fixed for local sources. Some on here may have them. As for me, I'd have to check the stock to see if I have any to fit the need (of those in stock) - once I confirmed what was actually used. .

The other parts like the pilot lights and such shouldn't be too hard for you to acquire. Even Rad Shack may have them in their bins in a store - or something useable. They may have said those "part numbers" are no longer in stock - but that isn't to say they may not be able to be substituted. Many "sales" people that handle this sort of stuff don't know a diode from a transistor either especially for subbing, so don't press your luck trying to get help there.

In article <T6qdnd-IzYrwPg_cRVn-rw@comcast.com>, "Andy in NJ" <SHORECOGS
at COMCAST DOT NET> says...

> Hello. I need a couple of components for a Realistic TRC-458. I checked with
> Radio Shack and the parts are no longer available. Can anyone suggest a
> source for these parts:
>
> Item D401 (LED), Part #L-0776, Channel Display (TLR321)
> Item PL401 (Lamp), Part #L-0786, S/RF Meter (11.73v @ 43mA)

Suggestion: Look for a generic replacement for the LED display
(I'd wager it's just a seven-segment unit), and replace the pilot light
with a LED (use a super-bright if it's for a backlight, and a standard
one if it's just a front-panel pilot light).

Happy hunting.

I purchased this on ebay and thought it would be useful in setting up my shack. I am a newbie and do like a gadget. However now I got it I realise I dont know what to do with, sad heh. Is anybody out there familiar with this item,it is quote "Capable of checking VSWR, transmitter power output, modulation, the 'goodness' of individual oscillator crystals, can perform a simple wavemeter function, generate RF signals with or without modulation, and also AF signals. Has outputs for oscilloscope, headphones, etc". Dont suppose any manuals out there.?

Actually, I need the light bulb for the meter, not the actual meter itself.
I am sure there are non-CB stores that have this part, as it is probably a
common part used in many radios. I just don't know where to look.

I found a place on the net that sells the display. With shipping it comes to
less than $10, no biggie. The display flickers in and out. Might even be a
solder joint - never took the time to check, which I probably should have.

Basically, the Drone at Rat Shack told me that if it's not in the computer,
there's no way to tell what other parts may be compatable. He did ask if I
needed a cell phone, though :) (nah, just kidding, he didn't ask that, but I
thought I'd throw it in :)).

That last part kills me... Of course the computer couldn't tell them what is compatible or not, it isn't taught electronics knowledge - nor programmed with subs in "MOST" cases. They "may" have subs for some things, but not for components like that. What an assinine answer. Basically, all it says is stock number such and such, price, in stock or out. They CAN pull up some manuals to show parts used, but they do NOT list subs. That system can't tell you jack shit when it comes to subbing parts.

As to your display, may be a bad solder joint - as you suspect. Check it before spending cash for the display - unless of course you just want to go ahead and buy one as a spare. As to the Smeter, is the bulb on the order of a wheat lamp or does it look like a fuse? I haven't looked the radio up to know, but I'm betting its a wheat style lamp with leads. Those are available at the shack in their parts bins. About 99 cents for a pack of 2 if I recall.

As I said, don't count on them to help. Most don't know their ass from a hole in the ground. They wouldn't know a resistor from a Diode to start with, so they sure in hell couldn't help with a Sub. There are some stores which have some who know - but not many. Of the 5 stores I've been to and all their workers, I've only found 3 people who knew anything about electronics. Sure makes ya wonder why the Board of Directors allowed them to take on the slogan "You've got questions, we've got answers". You can't possibly have answers when the majority of your employees aren't electronically inclined. What is funny, is I'll make up a list with stock numbers to give to my g/f to take to the shack and they'll question her as to whether she's buying the right parts! How the hell would they know - they have no clue what I'm using them for. IF they were electronically inclined, they probably wouldn't be working there - anyway! The store couldn't afford to keep them.

I don't think it matters much anymore anyway, I've seen where their components are selling for 50% off. Must be trying to rid the stores of them once and for all.

I don't get asked too often about the cell phone. Of course, I usually have mine on my belt in open view. I do it on purpose - just so I WON'T hear it.

Good luck in acquiring your parts!

L.

| answer.

Well, it's the best answer the guy could give. It's certainly better
to say `I don't know' then to guess (unless it's an educated guess, in
which case it's ok as long as you make it clear that this `answer' is
an educated guess.)

| As I said, don't count on them to help. Most don't know their ass
| from a hole in the ground. They wouldn't know a resistor from a

| found 3 people who knew anything about electronics.

The salesmen at RS are salesmen. If they pick up anything about
electronics, it's a bonus, but ultimately their job is sales, not
electronics. I'll bet most of RS's profits come from cell phones now
-- the rack of electrical components is probably still there only
because it's always been there. And maybe it's mere presence makes
them seem more knowledgable about cell phones and monster cables.

And if the salesman did end up learning a lot about electronics, he'd
get another job that actually put that knowledge to use. Wouldn't
you?

| Sure makes ya wonder why the Board of Directors allowed them to take
| on the slogan "You've got questions, we've got answers".

If your answer is `where can I get a cell phone?' `does this phone
have a camera?' `can I keep my number?' ... then they've got answers.

And since when are corporate slogans accurate anyways?

| You can't possibly have answers when the majority of your employees
| aren't electronically inclined.

Sure you can. It's just that the electronics questions are rare --
most of their questions are about cell phones, or about what kind of
cable can I connect X to Y with ...

> I don't get asked too often about the cell phone. Of course, I usually have
> mine on my belt in open view. I do it on purpose - just so I WON'T hear it.

They ask me every time. Probably because I only buy their clearance
stuff and an occasional electronic component.

I am looking for the following:

Knight:
- Front panel for T-60 transmitter (a nice one)

Heathkit:
- Frequency dial for VF-1 or DX-100/100B
- Mobile mount for GW-14/14A CB radio
- Two small black/chrome knobs for GW-series CB radios

Drake:
- 2AQ or 2BQ speaker/Q-multiplier
- 2A/2B crystal for 10m CW sub-band
- 34PNB noise blanker for TR-4C

73,
Dean K5DH

I've always taken that slogan to be less literal.

Question:"How can I save a large program, it won't fit on a floppy disc?"
Answer:"You can buy one of these CDRW drives and put it in your computer."

Question: "How can I communicate with my family when we are in a crowd?"
Answer: "There are various options. You can buy one of these CB sets, or you
can buy one of these FRS sets, or there are allways cellphones."

In other words, the questions will be about the products, or useage, and
the answers are the products to solve those questions.

It is just a marketing slogan. And for most of the population,
those are the answers they want.

Source record: 18548

FS: Kenwood TS440 HF Transceiver AllMode
I just got another Kenwood TS-440SAT Receives and
transmits fine. I notice if I go to 18 or 21 MHz the
frequency readout comes on and then blinks and then only shows dots.
Only on the two bands I mentioned the others are fine,100 percent.
I turned it on later in the day and the 18 and 21 MHz were working
fine? No Mic or power cord. I used my power cord and mic.
So I'm selling it as a working transceiver except for the two bands
that work and then don't work. The cabinet could use repainting.
ps: I was told it has a built in antenna tuner, But I't didn't work
and the person I got it from told me that I should clean all around
inside the tuner and said it should work.
Its been sitting a couple of years. But I will sell it as a no ant.
tuner. To be honest.
Price: 225.00

Slogans can bring in business or chase away business. It helps if it "applies" to the situation. IN this case, it doesn't.
Bad judgment on their behalf. Bad advertising, because they're advertising service that they can't provide in many respects.
Yes, they can sell Cell Phones and so on, but if someone goes in with an "ELECTRONICS" question which in most cases they're not qualified to answer then HOW are they able to carry out the "You've got questions, we've got answers"?
It just doesn't wash in the big picture.

Electronics "components" questions may be rare, but the rest is not.....
I'm not going to drag it out any more.

To me, it doesn't matter, I'm versed enough to shop for myself, but I've seen many be given very poor advice. THAT is what burns me. I'm not going to stick my nose in, that is up to them to clear up - not me. I'm not paid to sell their products.

I buy parts in there also, what does that have to do with asking me every trip for a cell phone? I respectfully disagree. That makes no sense. IF they see you WITH a phone, then they should not bother - regardless if you're there once a week or once a month. By now, most who shop there know they can get a phone without having to have one shoved up your ass.

I still spend hundreds of dollars there a year - if not more. I like Radio Shack for the things I can go there for in a pinch or for other needs. I'm not a marketing guru, but I know from past threads in one or more news groups - I'm not alone in my opinion where their slogan came into question. I said in a previous post - it was bad advertising. Maybe it isn't bad, certainly not false. Let's just say the slogan seems to be - stretching the truth a bit. I liked plain ole - Radio Shack. Things were much nicer back then. I'll still support them to the end.

L.

Just moved down from 20 M on the 850S in the WAE RTTY Test and find that I have a problem on both 40 & 80 metres.

The ALC is all over the place and power changes in tandem with the ALC, up, down, up down even with 40 watts into a dummy load. Using RCKRTTY and Rigblaster.processor is off, High Boost is out, Moni is out, AGC slow, Mic Gain is at 7 o clock.

any ideas???

Does anyone have the schematic for the MFJ-481 keyer?

I searched the web and found nothing.

Thanks,
Dave WG0Y

Whether we wanted Bush or Kerry, makes no difference. We got who we got.
Time to put those differences aside and hope for the best. All the moaning
and groaning, bitching and complaining isn't going to change the facts of
who has claimed victory. This country needs some major remodeling and
someone - anyone - needs to roll up their sleeves and get to work.
Actually, the majority of the politicians are crooked as hell. Most of them
have been in too long.

As to the foreigners who wrote our fellow citizens trying to persuade them
who to vote for, I say BUTT OUT. You have enough trouble running your own
country - small as it is. We have gotten along 200+ years without your
input, and we'll get along another 200+ years. Yes, we have our squabbles,
and yes we may bitch and disagree... but dammit, when the shit hits the fan
as in 9/11, we get together and kick ass. WE left jolly ole England once -
we thought it was for good. Then we had to go back to save your asses. So,
kick back and relax and drink your tea. You mind the store there, we'll mind
ours - here.

IF you disagree with me, then do me and the rest of my fellow citizens a
favor........ don't ask for any more welfare.
One more thing - you hate Bush? Well... your Prime Minister is chiming along
with him, so let's see how well you do in your own election! PRACTICE WHAT
YOU PREACH. We'll be across the pond watching - not that we give a damned.
You won't see us writing any letters to your people to persuade them to vote
for anyone in particular. WE're #1, all else - pick a number. But don't
stand so close, we can't stand the stench.

Is it any wonder that the rest of the world thinks of america as it does with bigots like you who
have their heads so far up their arse you cant tell the shit from the shit.
Thank goodness it may not be true.
Bush is no more representative of all Americans than Blair is of Brits.
They got elected, but that is politics.
Most politicians couldn't give a straight answer if it had a flagpole to hold it upright.
Marco
PS Apologies for top posting, it might save you having to read most of the claptrap that follows.

It was the Brits who "TRIED" to persuade "OUR" election. Stay the hell out of OUR business. We don't need your bull shit induced in our country. We told you that 200 years ago.

Bigots? Who the F#$K saved their asses????? (your's if in fact you are Brit) Huh?? You pansies sure can't save your own asses. You can't deny history! It is U.S. - the American Tax Payers who shell out our money to save the f&%king world, because the candy asses can't do it alone. IF "WE" didn't put all the "foreign" welfare bums on our welfare roles, we'd be far better off. OUR people wouldn't be hurting as they are. OUR seniors go without medicines and food cause we're too busy paying for the rest of the dead beats around the world.

IF it weren't for U.S.- you'd be speaking something other than English or whatever the hell you mutter. If it weren't for US, the Brits might STILL be in ruins. "WE" shelled out BILLIONS to rebuild their sorry asses and have YET to be repaid in full. WE have a right to be pissed. It is OUR money spent and OUR men and women who die for your sorry asses. It was said once, about 20 years ago, if the European countries would repay us for rebuilding them, our Social Security coffers would be well off til about the year 2075 or so. That is a LOT of money.

THE ONLY thing I agree with you on and you me, is the politicians being liars.

Quite frankly, I don't give a shit what the candy asses think of U.S. - They sure know where to turn for money! What they DO think, is we're a god damned Bank - better yet, one big "Grant" never to be repaid.. That shit should stop immediately. I can guaran-goddamn-tee you, we'd be hated for sure..... You can't say we wouldn't. WE give - give - give, and get kicked in the teeth every damned time. Every damned country we've helped has tried to screw us up the ass. THAT IS THE TRUTH. Iraq, Afghanistan, and I can go on. ALL got some of our money, now we are fighting them. FRANCE - stabbed us in the back. England, well, I'm sure in due time - they will too. We're TOO damned trusting and too damned liberal with our tax dollars when it comes to other countries. As long as I am a tax payer, I have every god damned right to be pissed off.

IF you have to ask, then you don't belong in the U.S. if in fact you do live here. IF you are a resident, then you're a traitor.
THIS country pays dearly in money and lives for the rest of the candy ass world.

Paranoid? Nah, I don't think so.... We have no reason to fear. Some of us may die, but we'll take a hell of a lot more of the enemy with us. I will agree with Bush on one thing. You're either with us or against us. Truer words could never be spoken.
But the fact is, MOST who claim to "be" with us, stab us in the back. As I said in a previous post, we're TOO trusting.
WE need to just do it alone and be done with it. WE're doing most of it alone anyway.

Whether I like Bush or not, isn't even the question. I'm sick of our country being walked on by others - others who we have helped and continue to help - then you candy asses have the nerve to talk about us? YEAH RIGHT! Stuff it up your ass. Bush is our leader - right or wrong. It is the bigger picture I look at. ALL our women and children's safety. The economy of our country faltering while we act as saviors to the world. OUR men dying because the candy asses aren't man or woman enough to stand up on their own two feet.

Yeah, maybe we are stupid--- for giving a shit about the rest of the world. Guilty as charged. Our sentence is handed down daily in deaths and dollars.

I am in need of a manual for a Heath HW-100. I know reproductions are
available for $31 plus shipping but hope to save some money.

Well when your nanny has picked up your rattle, get your daddy, if you know who he was, to change
your nappy.
Like I said, there is nothing wrong with the majority of American people, it is just the few
bigheaded morons who think the rest of the world owes them everything!!
Just remember your roots and be glad you have free speech.

Don't try and change the subject.
We were talking about SOME americans thinking the world owed them a living.
As for the UN, where is it situated? Who is the leading light?
The USA. I think you shot your own foot.

Is that your answer to the problem when you cant use your brain and intellect any more?
I think my main point is proved if you are representative of the morons, which for your sake I hope
you are not.
Marco

Hi,
Does anybody have a copy of "The Pegasus Book of Radio Experiments" by
F.G.Rayer that thue would be willing to sell?

Best Regards,

Nick

# 5849. FA: Harris RF-5020 HF Receiver/Exciter, many options

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-15 00:22:44 UTC
From: ElectronRon@The.KB
Message-ID: <iktfp0loin6o67fikccejdco7rft3gpkv0@4ax.com>
Source record: 18701

Auction ends Nov-21-04 16:05:02 PST

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5732277740

A portion of the auction blurb follows:

Here is an example of the outstanding Harris RF-5020
HF Receiver-Exciter. The unit covers the entire HF
range of 1.6 to 30mHz in 10Hz steps when operating from
the front panel. 1Hz tuning steps are available
through the serial control interface. Power input
is 26.4 VDC nominal @ 3amps max. Power out is
100 milliwatts nominal across the range, suitable for
driving a wide range of military RF amplifiers,
including the matching Harris units, the Redifon
GA-481 (which I use), the AM-3007/URT (part of the URC-35),
The AM-3349/GRC-106, and the Technical Materiel Corp
GPT-1K and PAL-350 to name a few.

This radio has a digital I.F., with DSP processing employed
during both receive and transmit. Available modes and
selectable bandwidths associated with each mode are:

USB/LSB -- 1.5, 2.0, 2.4, 2.7, 3.0kHz
AME -- 3.0, 4.0, 5.0, 6.0kHz
CW -- 350Hz, 680Hz, 1.0kHz, 1.5kHz
Modem and Digital Voice -- 3.0kHz

The BFO function is variable +/- 4kHz in 10Hz steps
from the front panel or in 1Hz steps through the serial
interface.

AGC attack/hang/decay data is as follows for settings
other than "OFF":
FAST - 25msec/100msec/100msec
MEDIUM - 25msec/500msec/750msec
SLOW - 25msec/1500msec/1500msec
DATA - 25ms/0msec/16msec

This particular example has all options installed except
crypto:

RF-5110MD High-Speed Data Modem. In the high-rate
39-tone mode, a channel transmission rate of 3466bps is
achieved by time differential phase shift keying (TDPSK)
of 39 tones which is combined with forward error correcting
to produce data rates ranging from 75 to 2400bps. The

modem is used during digital voice operation.

RF-5120AFC Harris ALE Automatic Link Establishment.
Please note this is the Harris proprietary "Autolink"
ALE system. It will work with other systems containing
the same option but not with the MIL-STD-188-141 ALE
most often encountered on the ham bands. The solution
in that case is to set up PC-ALE on your PC. :-)

RF-5130LPC Digitized Voice. Uses the U.S. DoD LPC-10E
(Version 52) 2400bps algorithm. During frequency hopping
the data rate is reduced to 800bps resulting in a slight
voice quality degradation.

RF-5140FH Frequency Hopping (ECCM). Programmable bands
up to two mHz wide. There are three options: a dedicated
hop set list of frequencies, narrow-band using one center
frequency, or wide-band using a programmable frequency
range. Operation occurs at 20 hops/second.

This unit passes the built-in-test (BITE), which checks
operation of the basic radio as well as all installed
options. The serial interface is operational, and I will
include software I wrote in QuickBasic which allows control
of basic radio functions via a PC. The radio has been
further checked out on the air via SWLing and numerous
ham contacts on 17, 20, 40, 60, and 80 meters. ECCM,
digital voice, and Autolink functions have all been checked
out on-air, or in side-by-side tests with another functional
unit where on-air testing was not practical.

Also included is a copy of the User Guide, which is
essential for learning the operation of this menu-driven unit.

Did they just start installing BPL in your neighborhood?

# 5863. FA: Harris RF-5020 HF Receiver/Exciter, with options

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-16 05:10:41 UTC
From: ElectronRon@The.KB
Message-ID: <ks2jp05m5jqfljjb5hhqu7lmlcd305idlj@4ax.com>
Source record: 18715

Relisted due to description changes.

Ends Nov-22-04 19:00:00 PST
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5732411616

Here is an example of the outstanding Harris RF-5020
HF Receiver-Exciter. The unit covers the entire HF
range of 1.6 to 30mHz in 10Hz steps when operating from
the front panel. 1Hz tuning steps are available
through the serial control interface. Power input
is 26.4 VDC nominal @ 3amps max. Power out is
100 milliwatts nominal across the range, suitable for
driving a wide range of military RF amplifiers,
including the matching Harris units, the Redifon
GA-481 (which I use), the AM-3007/URT (part of the URC-35),
The AM-3349/GRC-106, and the Technical Materiel Corp
GPT-1K and PAL-350 to name a few.

This radio has a digital I.F., with DSP processing employed
during both receive and transmit. Available modes and
selectable bandwidths associated with each mode are:

USB/LSB -- 1.5, 2.0, 2.4, 2.7, 3.0kHz
AME -- 3.0, 4.0, 5.0, 6.0kHz
CW -- 350Hz, 680Hz, 1.0kHz, 1.5kHz
Modem and Digital Voice -- 3.0kHz

The BFO function is variable +/- 4kHz in 10Hz steps
from the front panel or in 1Hz steps through the serial
interface.

AGC attack/hang/decay data is as follows for settings
other than "OFF":
FAST - 25msec/100msec/100msec
MEDIUM - 25msec/500msec/750msec
SLOW - 25msec/1500msec/1500msec
DATA - 25ms/0msec/16msec

This unit has the following options:

RF-5110MD High-Speed Data Modem. In the high-rate
39-tone mode, a channel transmission rate of 3466bps is
achieved by time differential phase shift keying (TDPSK)
of 39 tones which is combined with forward error correcting
to produce data rates ranging from 75 to 2400bps. The
modem is used during digital voice operation.

RF-5120AFC Harris ALE Automatic Link Establishment.
Please note this is the Harris proprietary "Autolink"
ALE system. It will work with other systems containing
the same option but not with the MIL-STD-188-141 ALE
most often encountered on the ham bands. The solution
in that case is to set up PC-ALE on your PC. :-)

RF-5130LPC Digitized Voice. Uses the U.S. DoD LPC-10E
(Version 52) 2400bps algorithm.

This unit passes the built-in-test (BITE), which checks
operation of the basic radio as well as all installed
options. The serial interface is operational, and I will
include software I wrote in QuickBasic which allows control
of basic radio functions via a PC. The radio has been
further checked out on the air via SWLing and numerous
ham contacts on 17, 20, 40, 60, and 80 meters. Digital
voice and Autolink functions have been checked out on-air,
or in side-by-side tests with another functional
unit where on-air testing was not practical.

Also included is a copy of the User Guide, which is
essential for learning the operation of this menu-driven unit.

# 5864. Heathkit Handheld Radio

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-16 05:36:20 UTC
From: m033948@hotmail.com
Message-ID: <1db8771.0411152136.482c8e30@posting.google.com>
Source record: 18716

I'm wondering if someone can help me. I'm trying to find a specific Heathkit radio, but I don't know the model number. Here's the description:

It was a 2m handheld radio, about 5-6 inches high. It covered the entire 2m band (144-148). To select the frequency, there were three different "thumb dials" on the top of the radio. The first was the 4-8 for the MHz, followed by the first two of the kHz. For +/- 5khz, there was a button that you had to push, also on the top. There was no LCD display, nor was there a DTMF pad (unless one was installed after the fact).

I am looking because I had purchased this radio (my first radio) used from an older ham in 1995, but something happened to it after all these years, and I can't find it anywhere... so I'm trying to find another one. However, I won't be able to find it unless I know the model number. Pictures would be of a great help (just e-mail them to me if you can). I really appreciate everyone's help on this. Thanks!

Carl,
There is one Heathkit vhf ht listed on RigPix - could be what you're
looking for, model number and photo availalble at:
http://www.rigpix.com/heathkit/heathkitselect.htm

Dont think its BPL since the noise seems to stop in the early morning
hours, but its constant from morning till past midnight. We have no
overhead power lines in my area.

My antenna setup is a simple random wire going to the back of the home
into a tree. I tried locating the noise with a portable radio and its
in a too wide of an area to pin point the source.

For Sale: Seco Model 78 tube tester. Works excellently! But my son and I are dropping out of the antique radio refurb hobby. (He's headed off to college...) The wooden case has been stripped and ready for your favorite coat of shellac or varnish. (I had planned on doing this myself before we got out of the hobby. I would have done it before selling, but felt maybe the purchaser would want to choose their own favorite finish instead.)

I have NO IDEA what these things are worth. And we don't do Ebay. But I will ask for the original selling price for this unit back in 1958, and you can calculate the 45 years of inflation that will signify the bargain you're receiving. ;-)

$48.50 and I will pay for shipping and insurance.

Dave,

You make a valid point and I agree with prejudice. The following remarks are not intended directly at you, but to sort of address the issues a bit more.

MANY Americans disagree with Bush getting back in. In saying that, I'm not admitting to having voted or not - for him.
Some of his policies suck. What I do agree with, is his tone of "You're either with us or against us". But as I said, many of those who "claim" to be with us, end up stabbing us in the back.

Being our closest neighbor, yes... things could be "better" between the U.S. and Canada. They should be. While I may not agree with "everything" in principle, things could be much better.

Those who called us Stupid Americans, are A. Traitors from within or B. "so called" friends.

Though Bush won, Kerry could have had he had enough votes. So too could have Nader or any of the others in their individual parties. England or any other country has no reason whatsoever to try to sway our voting, nor do we of theirs or anyone else's. The voting machine has spoken - right or wrong, and we all must deal with it. LOTS of work in the U.S. alone needs done. There are domestic issues which need attended to. BUSH is capable of doing it, IF he chooses to do so.

Let's face it, the majority of all politicians are as crooked as a cork screw. It's always been that way and always will - regardless what country it is. It is up to the people to attempt change using the process as established. The other problem is, not many "qualified" or well rounded

candidates are there to choose from. Special Interest groups get their hands in it, and so on. IT SUCKS. But, we must deal with it. These last few elections it has gotten worse instead of better. They used to "Debate" policies, not get into the crap they've recently been doing. I don't give a shit if the man in the white house got a speeding ticket 20 years ago. I want to know what he's going to do NOW to give a helping hand to this country's needs. Actually, I'd like to see "Foreign" policy forgotten about for a while. Let the others do their thing whilest we take care of our own - for a change. So long as no one is fixing to attack us, I could give a shit less what they're doing. Live and let live!

"I" am not the one who started this thread of insults. But I'll be damned if I'll sit back as an American to have some half wit from another country cut down on us. Whether I like Bush or not, doesn't matter. HE IS THE PRESIDENT - as such, I have to respect that. BUT in the larger picture, I do my own part to defend their safety. Yes, we all have our disagreements and so on, what country doesn't? But we deal with it. We don't need outsiders casting their opinions when they aren't in any better position to do so. You can hate our government all you want, many of us do as well in some respects - be it the local, state or federal - especially if things aren't going our way... but to start a campaign of insults of our intelligence - man... that's biting a dog in the ass and sooner or later that dog will turn and bite back.

HOW DARE any one from another country call US - STUPID. IF you don't like it, come here and try to become a citizen, then you'll have every right to bitch and a chance to perhaps change things - at least with your vote since you must be an American {born here} to become President. You don't hear us whining about the Canadian/English or other governments do you? NO. Because WE DO NOT CARE. WE have enough problems here to take care of. SO, unless one is willing to put up - then SHUT UP. THAT is meant for the loud mouth who started this all and any of his supporters.. The jock straps that they are. The "government" gets involved more with the other countries, while most of us could care less. We're too busy eeking out our own existence. My opinion is to leave them all do their own thing, stay out of their business - even with foreign aid, which I'd love to see cut off forever. BUT - if they come here to attack or we hear of plans of an imminent attack on US - kick their asses and make them non returnable - period. Defend our borders and to hell with the rest. Let the other countries take care of their own problems - in every respect. This country does a hell of a lot for the world, we don't need the bull shit from the peons of society to dictate to us. Go back to your momma and grab a titty bottle, cause we're not listening.

I've said it once, I'll say it again.. IF you don't like the Americans... FINE - kindly remove yourselves from our Welfare roles. Don't cry wolf at every shadow - to have us come running to help. Put a pair of trousers on instead of your panties, step up to the plate and be a man - make a go of your own country and it's economy, and quit sponging off of U.S.

Dave
Absolutely agree, but some poster on here have their heads so stuck up b** that they cannot see the
reality of world life.
The world does not revolve around America (or any other country for that matter), and the sooner
they realise that no-one owes "them" a living, the soon that perhaps the whole world can live in
peace.
Well we can dream can't we ??
Marco

Ah, the ass hole farts again..... Excuse me, the rest of the world DOES revolve around US, with their revolving requests for our tax dollars and military aid. YOU need to realize - ASS HOLE, if it weren't for the US, YOU would be speaking German or Russian. DICK WAD..... READ YOUR F*&KING HISTORY BOOKS. Oooppps, I told you that before, so it's obvious you CAN'T read.

Problem is, you talk of dreaming, YOU ARE DREAMING. You never woke up to the reality that you speak of. Wake up and smell the tea.....

# 5886. New program - Coax Choke

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-16 23:06:39 UTC
From: Reg Edwards <g4fgq.regp@ZZZbtinternet.com>
Message-ID: <cne15u$3co$1@hercules.btinternet.com>
Source record: 18738

```
New program SELFRES2.exe
-------------------------------------
Input data :

Length and diameter of solenoid.
Number of turns.
Conductor diameter
Length of line in which the coil is inserted.
Testing frequency.

Output data :

Coil self-capacitance.
Coil self-resonant frequency.
Choke impedance vs frequency.
Insertion loss of choke in dB.

Performance is based on a choke wound with coaxial cable of the same type as
the transmission transmission line in which it is inserted. Conductor
diameter is that of the coax outer. It behaves a single wire. Coax inner
diameter is of no consequence.

Choke insertion loss is a measure of the reduction in power radiated from
the feedline. But, despite the attention it attracts, actual power radiated
from the feedline WITH the choke will never be known because the power
radiated WITHOUT the choke is indeterminate.

SELFRES2 is 51 K-bytes. Download from website below in a few seconds. It is
not zipped-up and will run immediately.

Radio Specialty Model 1179-22-1 Repeater $ 50
Appears to be complete, minus crystals.
I have no way to verify operation.
Has 2 settable PL tones...
Outside of case is scuffed,
but inside is very clean!
NO documentation or info...

Standard C468A LNIB $ 90

Standard C568A 95%+ with extended range mod,
and extra hi gain whip. $175

Icom 02AT with wall wart.
Icom BC-35 plus extra Ice brick battery $ 65

Icom IC-229H 90% $ 85

All items will include manuals unless noted.

I also have a lot of C64's 3 good 3-5 fixable or parts.
Including a SX64 portable that is fixable.
Assorted peripherals - drives,printer,parallel/serial ports,
modems, tape drive, graphics pads, joysticks, ect.
A lot of cartridges, and software - games to productivity.
Included are extra books for programming ect.
Plus software to run a BBS from the C64..

I would like to sell it all as one group. Will cost more,
if sold piecemeal....

$100 takes it all on the C64 equipment.

Shipping is NOT included on any item(s).

HI, I'll get back to you later, late for work.
Man, it took me 4 hours to repair mine. VERY tiny work.
TINY soldering iron needed, and a LARGE magnifying glass and a steady hand.
Also, you will need some wire wrap wire, very thin.
VERY BAD design on Yaesu's part. SHAME ON THEM!!!!!
I'm using mine as a base and not mobile. Not sure if I can trust it in a
bouncing car.
Works fine as a base.

Source record: 18510

Tom,
You did not give a lot of information but! assuming the high voltage to be OK (aprox 2200 volts) and the tubes good. The operating bias on the grids is set by the voltage droop across the relay coil in parallel with R18 a 2k resistor and voltage divider resister R16 (33 ohm). this assumes that the bottom of R16 connected to the antenna relay jack is shorted to very near zero volts when you key the rig. Bear in mind that the transmitt relay or transistor in your xceiver must sink quite a lot of current. If the Relay or transistor in your rig have resistance (pitted contacts ETC.) this resistance is in series with R16 and could easily change the bias voltage to drop the idle current and also the amount of drive required for the amp.

My guess is that if you relay jack to ground you will see the idle current jump to the recommended 60 ma. Use caution as the jack has -160 volts DC on it and enough current to really give the relay's in modern rigs a work out. You might need to add an external keying relay.

good luck with the trouble shooting.
N0DG Don

# 5909. Need Manual.. Dentron W-2 Wattmeter

# 5913. Measure RF Power at 900MHZ

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-19 21:35:07 UTC
From: ed_vogel@my-deja.com
Message-ID: <90c699a1.0411191335.5fc32753@posting.google.com>
Source record: 18516

Hi,
I have 20 900MHZ ISM band modules and I would like to measure RF power. I have a a Tektronix 2712 Spectrum Analyzer and some attenuators(BNC) and RG 58 coax. Unfortunately I do not have an SMA connection on the antenna port. there are pads for the antenna that I could fit an SMA to but I none of the ones I can find fit quite right because of physical interference with the RF shield.

I tried soldering the RG 58 coax to the signal and ground pads but the signal was not visible at the spectrum analyzer. I know RG 58 is lossy but the Belden Coax calculator said I should lose about 20% of the power at 1 mwatt.

Any thoughts or suggestions regarding coupling this signal (100 to 500mW) to a power measurement would be greatly appreciated.

Thanks,
Ed V.

depending upon the mode of operation of the module, it may be difficult to see the carrier with your spectrum analyser. Most (not all) 900 MHz ISM stuff is frequency hopped, so the carrier will dwell on a partiucular frequency for only a short time. Also some of these devices are polite and will not transmit in the blind so another modem must be communicating with it. All this being said, you were really asking about wiring up a coax cable to the module.

Soldering a small coaxial cable should be OK if you can get to ground and antenna with very short connections. Keep in mind the loss of the cable will be significant at 900MHz.

As mysterious as the the noise came it left, I had this racket on and
off going on a daily basis where I actually though it would end radio
for me, it almost sounded like a car with bad wiring running next to
my radios, so far for about 4 days now its been real quiet, maybe it
was an electrical problem somewhere????
Not sure, I even went as far as throwing the mains off and hooking up
the radio to a battery....same noise, the only hint of a cure was my
old trusty Ten Tec Triton's noise blanker...superb!

Anyway, I hope it stays quiet and I want to thank all the guys that
replied with thoughts and help.

Gil

## 5920. Best noise blanker

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-20 14:41:25 UTC
From: gi1pi@yahoo.com
Message-ID: <a604b65b.0411200641.37f5ec3c@posting.google.com>
Source record: 18522

I had a recent experience with impulse static in my area that became a good test for a rig's noise blanker. Being a ham on a budget none of my radios are worth over $400. and I found my Ten Tec's noise blanker to be superior to my entry level Kenwood and Icoms.

The TT Triton 540 wiped out the noise without distorting the signals, I found it amazing since all my other rigs would only wipe out some of the noise while introducing distortion to the signal.

Would love to hear opinions on what rig you feel has the best noise blanker out there.

Gil

> blanker out there.
>

My experience tells me you can not assign a good or bad grade to various manufacturers. I have had various Yaesu, Kenwood, Icom, and TenTec radios over the past years. Some of these products had excellent noise blankers, some had terrible noise blankers.

The very best I have seen were my old Yaesu FT301 and my new Icom 746Pro II, yet the worst I have seen were also in Yaesu radios... FT 757 for example. Also my old TenTec 555 noise blanker was nearly useless.

Additionally, you may find various web sites that tell how to tune or improve the noise blanker in various models. Apparently many models may come off the production line with good noise blankers that just aren't effective due to poor tuning and setup. I believe the Yaesu FT817 was one of these.

The 100 Mhz O'scopes from HP and Tektronix are going for a hundred or
two on ebay, so it's unlikely that a 20 MHz scope would sell for
anywhere near a hundred. Best bet is to auction it.

In article <Xns959AC8CFF2F90VoiceFreedomfreedomn@206.124.0.13>,
VoiceFreedom@freedom.naa says...
> We're interested in finding a couple of lowest cost possible walkie talkies
> that don't require a license, something we could carry around when we go out,
> in case we lose each other in the mall or something. Does anything like that
> exist? Does it come in 900 Mhz or what?

I'll second the recommendation for Family Radio Service (FRS) radios.
The scenario you describe is tailor-made for that type of transceiver,
and they are available at just about every mass-marketer.

As suggested in another post, cell phones are also useful for this, but
if your situation involves kids then that may not be a viable solution.
FRS is fine for them to use.

The best solution, though, is to use amateur radio equipment. Ham
equipment allows you to operate on frequencies that are set aside just
for ham radio -- therefore you don't have to compete with 500 other
families at Disneyland who are also using FRS equipment, for example --
and at higher power levels than you could use with FRS (or GMRS or CB)
equipment. You will need a license to operate amateur radio equipment,
however. In the past, that included a Morse Code exam, but that's no
longer the case if you're just looking at using VHF/UHF equipment. The
exam consists of a simple multiple-guess exam these days, and testing
opportunities abound all over the US.

My wife opted to get a license several years ago, and it's proven to be
very helpful to us over the years. Although we also have FRS equipment
to keep in touch with other non-ham members of the family when we're out
shopping or at amusement parks, Claudia (KC6NGO) and I use the ham gear
when it's just the two of us. It helped us greatly when we were taking
two cars cross-country from Southern California to New York several
years ago. We also use it when we go camping. It's been especially
helpful when we were at the Rose Parade -- I have done communication
support along with the 300+ other hams who help out each year, and
Claudia kept in touch with me via the radio when she was camped out on
the parade route with the grandkids while I was working at the parade.

Something to consider.

Source record: 18449

Hi Gang,

Guess what? After being in storage for a year, I hooked it up and let it flicker for a while. It finally settled down and started working with a solid 25 watts output. I let is sit overnight and it is still solid today. Now if I can find a home for it.

73
Tony - W9JXN
tonysokol@sbcglobal.net

PS: Here is another TR-9130 owner's comment:

Turn it on and let it go for a while. The phase locked loop is out of whack, but sometimes will turn on after it warms up. Mine has always done that.

# 5948. DIY - Anyone built one of these - KIT : Deluxe Receiver HF Multicontroller (Multicoupler) Kit

w8zr is a member of premium-rx and IIRC the project was mentioned in a favorable light by Greg (The list owner) shortly before the article was published.

There is a discussion group on the w8zr site where quite a few people have left comments and questions resulting from building and using the multicoupler.

# 5956. Icom IC-745 question (how does CW mode work?)

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-22 20:13:38 UTC
From: Joel Kolstad <JKolstad71HatesSpam@Yahoo.Com>
Message-ID: <_aedndMhnrX61T_cRVn-ug@comcast.com>
Source record: 18458

I've recently acquired an Icom IC-745 and I'm unclear on how it's supposed to work in CW mode. It does receive in SSB and AM, so in general the receiver appears to work. When I press the 'mode' button to get it to CW mode, however, it's just... silent. Actually, if I turn up the audio gain, there is some slight noise in the background. If I turn the squelch (close to) all the way up, the green 'receive' LED will go out and there's no detectable noise coming from the speaker.

Any idea what I might be doing wrong here? I was expected that there'd still be some hissing (background noise) coming from the radio even in CW mode?

Thanks,
---Joel Kolstad

It could be the filters. Unless an FL-52 or FL-53 455 khz filter is
installed, the radio doesn't work when switched to narrow. Take a
look at page 7-1 in the manual. It shows the various combinations of
filters, and which works when.

I agree the ex-owner probably ripped out the filter.

I agree also. You're probably missing the CW filter. However check your manual. Every rig I've had with an optional CW filter had a way to route the CW mode through the SSB filter if that filter was not installed, either by the menu or a jumper.

# 5962. Help measuring freq of 2m rig?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-23 14:39:14 UTC
From: Ken Bessler <kg0wx@NOSPAMyahoo.com>
Message-ID: <rYHod.1792$3I.1128@okepread01>
Source record: 18464

I live about 15 miles from the N0KTA 146.715
repeater. I like to talk to the 146.700 repeater in
Pratt, KS (about 95 miles).

Problem is that when I transmit on 146.100 for
the Pratt machine, I inadvertantly also key up the
146.715 machine.

At first I suspected my transmitter was off freq so
I tested 3 other repeaters - 145.370 at 1/2 mile
away, 146.895 at 1 mile away and 146.850 at
3 miles away. On all three tests, I could key up
those machines as long as I was +/- LESS than 15
khz from the correct input freq. On all 3 when I
went to the next channel (15 khz spacing) up or
down, I could not key up the machine.

I also did a simplex test with an OP about 1/2 mile
away. I tx'ed DTMF #5 for 30 seconds while he
moved above and below my freq. He reported
he lost my signal as soon as he got more than 10 khz
from me. He also reported that the signal levels at
10 khz were equal between + and - .

All these tests were done with a known good antenna
& new CQ-102 coax. Rig is a 1 year old Kenwood
TM-271A. All tests were done at an indicated 68 w
which is about normal for hi power from this rig.

I'll refrain from using the Pratt repeater until this is
fixed.

My question is this - have I done enough to assume
that the problem is not on my end? Sending in my
rig for service monitor testing would be difficult & a
genuine pain in the neck.

How far away from this little guy do I need to be when transmitting with 75 Watts? I'm assuming (ASSUMING) at least 10 feet or so, but can this thing be closer to me whilst I'm transmitting? I know it will also be most effective standing upright, but can this thing receive and transmit reasonably well if I am not able to mount this antenna upright? I have an awkward shaped house, and am a little too "husky" to venture climing up, and mounting the antenna on my own without extreme risk of injury, or potential to fall and kill myself.

(I'd pay someone to do it for me, but honestly, I'm not sure who to contact for something such as this.)

Please excuse the ignorance... And the EXTRAORDINARILY RARE instance of cross-posting. I won't make it a habit to do this in the future, but I'm praying for an answer soon, as my free time is limited.

Since you've tested with *very* close repeaters and not interfered with
them, it isn't your set. It's more likely inadequate filtering at the
146.715 repeater which is keying up on your adjacent channel signal. To

prove this try another set at your location; also try your set (and another, pref.) at various locations around the area to confirm this. You could also try with low power from your (and another?) set.

To *really* confirm that you aren't putting out spurii you need to get hold of a spectrum analyser; a VHF radio test set would do this, but I'm a little far to help. :-) Doubtless there's someone a little closer with the correct gear to help out if it becomes a requirement, but I don't think it is.

Cheers.

Hey Daniel
I need to ask this. It's not about license class. Why does it seem
that so many Technician class don't have a clue about the simplest of
things about radio or antennas but they know how to get a vanity call?

To answer your question. You would want the antenna outside and I
would get the antenna up as high as you can, maybe hire a neighbor kid
to do the climbing and use good coax. Maybe get on the local repeater
and ask for help, most hams are helpful!

I've been told that if you had $1000 to spend, spend $900 on the antenna
system and $100 on the radio!
Good luck

The only way to determine your rigs frequency would be to put it on a
service monitor or at the least, a frequency counter.

I have 3 service monitors and would be glad to check your rig free of
charge if you pay postage both ways.

My test equipment is calibrated to an HP GPS frequency standard so I can
give you a pretty accurate measurement.

Well I would start with the ARRL page URL:
http://www.arrl.org/news/rfsafety/

Then a calculator at URL:
http://n5xu.ae.utexas.edu/rfsafety/

Call a TV shop that installs antennas -- most can handle small roof top
installations.
Be sure they read and understand the installation instruction sheet.

Good Luck

Do not assume. Although you would have studied this for your Tech license, it didn't stick with you (that's normal by the way) since there was so much to learn at the time. Get out your copy of the "Now You're Talking" study guide . Now that you have a need for the radiation safety information, you will absorb it much better than when you studied for the test. Go through the charts, tables, equations and you will be able to tell what is a safe operating distance.

Antenna orientation is important and depends on the application. Most repeaters have vertical antennas and so the signal is vertically polarized. Thus you want your antenna to be the same for maximum signal compatibility. If you turn it horizontally for example, your signal will be horizontally polarized and the effective result is that your signal will sound only half as strong into the repeater. If the repeater is close, this is no big deal but if it's a ways off it is important. On the other hand, if you are into working VHF/UHF sideband or CW, most of these folks use horizontally polarized antenna setups and you should do the same.

You might put the antenna up in the attic. Many people are quite successful with this setup.

> (I'd pay someone to do it for me, but honestly, I'm not sure who to contact
> for something such as this.)
>

As some one else has send, join a local club and/or get on the local repeater. They can help you find some one. Or have enough beer and pizza on hand and have an antenna party! I met my current husband through ham

radio. The first time I ever saw him was when he came to help me with an antenna. Being on a roof doesn't bother me but I'm scared to death of climbing a ladder!

Every one starts out as ignorant. It is only through time, experience, and making mistakes that people develop knowledge. We've all been where you are at in our ham radio careers.

I resolved the question with testing. I had 5 other stations
all over the county try the same trick - I.E. transmitting 15kc
below the input to the N0KTA repeater. All 5 were able to
make the repeater key up easily.

That plus the fact that my TM-271A comes standard with a
TXCO and the simplex tests I've done has convinced me that
it's NOT my rig.

I contacted N0KTA but haven't gotten an answer yet.

Thanks to all for the advice & help.

Know anyone with a frequency counter? Hold one of those fairly close
to your antenna while transmitting, and it should give you your
transmit frequency.

I notice my MFJ antenna analyzer also has a frequency counter input,
if you know anyone with an analyzer.

Even if the CW filter is missing, he should be receiving CW through
the standard SSB filter.

Just switch to the "CW" mode, and make sure "CW narrow" isn't switched in.

At least, that's the way my Icom 735 works. The 745 shouldn't be any different.

Yes. I enjoy building. I usually build something, test it out, and go to the
next project.
>
> Q#2 - How does the "Assembly" of the Kit go ?

The kit is for an intermediate builder. It went well because the assembly is
well
documented. The is lots of mechanical assembly on the front and rear panels
because
of the number of switches, LED's and connectors.
>
> Q#3 - Does the "Finished" Kit perform well enough so that it is
> 'worth' the Money and Time to built it ?

It does a good job, and the construction is solid but the video amplifier
chip
is noisier than passive splitters. I have lots of receivers in the workshop
and
having the ability to drive 8 receivers is a godsend, however. I also
listen to low
frequency signals (below 500khz) and it does a good job in this region. For
lf reception I replaced the 0.1uf coupling capacitors with 1.0uf units.
>
> Q#4 - Are there 'cheaper' Lower Cost Ready-Made alternatives
> to this "Kit" ?

The purpose of the switches is to enable each receiver by controlling the
mute.
If you don't need to control the mute of you receivers and don't need a
preamp
you might look a some passive splitters from minicircuits labs. The passive
splitters
will have loss, however. A 4 way splitter has 6db loss; an 8 way splitter
9db, so you would
need a preamp.

Unless the filter was removed incorrectly by a previous owner. For example my TS50 requires that a jumper board be put in place of the CW filter board if it is removed. If the IC745 has such a jumper board, and it was not replaced after a filter removal, then the CW mode might very well appear dead. Just a guess of course.

Or maybe it really is operator error as you suggest. Lets hope so... ;)

Unless the counter isn't worth a crap, you don't need to hold it "next" to
the antenna. It should measure it out of the air. Unless you're using a
rubber duck that sucks to start with. Most counters are pretty sensitive.

My MFJ-886 counter is sometimes sensitive, and sometimes not. Barely
measures the output of a QRP hf rig. A little better with a 25 watt
vhf/uhf dual bander. Okay with a 100 watt hf rig. Depends on the
rig...

Thanks for the heads up, I'll know not to buy one of those! The counters I use pick up just about anything. Actually, in some cases, they're too sensitive and I have to take measures to avoid that aspect.

Dan there are a lot of people on these NG's who are helpful and keep things
on track.

But there are those that "put others on" or are trolls.

Reason for the mish mash mix of folks on these NG's is they are unmoderated
and free.

To avoid this

1. Weed thru the goofy replies and IGNORE the ones that are not helpful --
NEVER respond as they are hoping you will.

2. Join a moderated group like the YAHOO forums. Tis free but you must
subscribe
see URL:
http://groups.yahoo.com/search?query=amateur%20radio

There are 1500 different Ham groups there - most are moderated.

Lots of expertise and good interchanges there as well as here (if you learn
to expect and ignore the negative or goofy posts)

Hey Daniel
I answered your question, but I also asked you a question which you never answered, for some reason I think your troll remark is meant for me? I wasn't being a troll nor do I feel you are trying to ruin the hobby for me! My question wasn't to berate you or your license class nor was it about no code. I just wondered why some people want all the techs grand fathered into generals but so many don't have the knowledge or experience yet to operate radios at 1500 watts. Please don't anybody take this personal but yesterday alone I saw 4 different post from tech class license's that had vanity calls that asked some of the most basic questions, 1 had been licensed less than a month and wanted to know the difference between a hand held a a "table top" radio another wanted to know how to hear the input of the "tower".
All I was doing was asking a simple question for my own knowledge.
It's great that you asked your question before transmitting 75 watts less than 10 feet from your head. I fear that if tech's are grand fathered into generals that some may just transmit 1.5k watts into an antenna strung across the ceiling!
Please go back and read my answer to your first post, I did give you a hint to hire a neighbor kid to climb for you (I do that all the time), I also told you that you should put your antenna outside and as high as you could with good coax, also to ask local hams on the repeater (tower)[this is my joke :) ] for help, and for this you call me names?
I really think you took my question the wrong way am I'm truly sorry that you feel that way, and that you feel you have to be "funny for everyone else", and that you have no respect for me because I unlike you wasn't trying to wound anybody's feelings.

You need to go back and read up on the respective privileges of the various classes. Techs are already allowed 1500 watts of power at all ham frequencies above 30mhz. This is actually riskier than using 1500 watts at HF since the VHF/UHF frequencies are in a range that is the same as the resonant frequencies of the human body and are therefore more hazardous to the operator and others in the vicinity of the radio. This is why all the questions on radio frequency safety are on the TECHNICIAN exam not the General exam.

In addition to that, there are a significant number of people who test straight to General at one test session and have no more experience than a new Tech. Then of course there are also significant numbers of Techs testing to General within weeks or months of getting their Tech licenses. They also have little experience at that point. In any case, all are allowed to use high power for VHF and up. Of course at HF, one must be a General to use high power.

Everyone starts out with similar basic, simple questions. This is not covered in studying for any of the exams, not Tech, not General, and not Extra. The only way to learn these things is to ask people, read the manuals (which are often confusing), make mistakes, etc.

> All I was doing was asking a simple question for my own knowledge.

A Tech can already legally do that on frequencies above 30 mhz, i.e. 6m, 2m, 222mhz, 440mhz, 1.2ghz, etc. He/she doesn't have to be a General.

You ("whoever") really need to go back and read the "Now You're Talking" Technician study guide instead of slamming the inexperienced.

"everyone else" refers to anyone who was trying to get their kicks off by
being condescending. I never really took anything you said to heart, nor
did it bother me any. My only excuse is... It's been a year, I've not been
on the air due to personal challenges, and I want to get more into the hobby
again. It's been a long time since I've been on the air, and I've been
doing a lot of things since... Buying a house, trying to find a decent job
moving all the way across the country from California.

Don't sweat it bud! Nothing was said that bothered me. I was mostly trying
to reassure some of the extra sensitive folks on the board. I'll not spend
any more time on this thread, as I've thankfully been given all the
information I need, and I appreciate everyone's contributions. No hard
feelings, bro..

Best...

Have a great holiday.

You are correct Marvin - the only one to come up with the right answer! I found my check to him last evening and then was able to locate his address from the name. Thanks for the reply.

Make sure PBT and Filter are not switched. I remember some jumpers
that needed changing and that information was in the service manual,
might have been for the IC-740 though.

For PBT to work the IC-745 required both the 9 MHz and 455 kHz filters
be installed.

Seem to remember some stuff we did to get it to work with only one
filter but has been a long time since I looked into the IC-745 and CW
filter installation..
Worked at Icom America for 11 years supporting all products, left 3.5
years ago.

You ("Dee D. Flint) really need to go back and take your own advice
instead of slamming the inexperienced. I never said I knew it all. Heck,
I don't know much of anything. I asked a still unanswered question and I
answered his question. I get called a troll and told I'm being
condescending? You have taken everything I said to somebody else way out
of context, and I don't see why you feel such a need to bash me while
protecting Daniel? I never was a tech so I guess I don't know their
privileges, sorry. I don't feel the need to go back a read the "Now
You're Talking" Technician study guide. So I'm wrong about how much
power a tech can use, all the more reason for my question! I guess I
should go back and remember all of the novice operating frequencies
while I'm at it?

# 6002. Yeasu FT50-R - dismantling of display

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-24 20:53:28 UTC
From: skjervik@netpower.no
Message-ID: <41a4f344.11368286@news.online.no>
Source record: 18406

I need to dismantle the display in this radi as I have to move one display from a defect radio to a radio wth a defect display.

Problem is, ho do I get to it. I am able to get off the outer cover, that's no problem. So far I loooosen 3 screws to be able to remove the print card on which the display is mounted. But here I encounter a problem. It seems it's holding thight in the upper left ccorner, near the volume knob. But I can't see any more screw to loosen.

I would appreciarte very much if someone could give me a hint on hove to solve this, or a link to somewhere it may be described.

Kind regards
LA2GKA Olav

You slammed the guy and acted like a know it all even though you did not say
you knew it all. And yes you should go back and read "Now You're Talking"
as you've forgotten too much. I reread my manuals periodically and get new
ones when they come out just for the purpose of keeping up to date.

I had seen a website showing how to change the regular display to a blue one, can't seem to locate with a quick check.

A good Yaesu dealer may be able to help.

So you're saying that you area know it all and can be condescending to me?
I didn't see where Daniel needed you to speak for him, and I don't see
any reason to know the operating privileges of any other class then my
own to ask the question that I asked? I never called any names nor tried
to put anybody down. My answers to Daniel should have been helpful, but
he chose to ignore that and call me a troll and you are doing to me 10
times worse then what you are accusing me of doing?
But I forgot you know so much more about everything then me so please
forgive me and I'll ask your husband to ask your promission before I
post next time.
My question is still unanswered!
Al the rest I have to say to you deleted.

Hmmm.... as I read this in six different newsgroups, I will take that advice to heart.

But seriously, I think you are right. I'm one of the biggest proponents of acting like ham operators here, instead of acting like the rest of Usenet. Hams act like friends right from the start; people here act like sociopaths. This (these?) newsgroup is not a fair representation of ham radio. Ham radio is a whole lot better. Give it a try.

It's good to see that you worked the problem out yourself. I'm amazed that
your signal made it through the cavities of the local repeater. Sound like
the owner needs to do some duplexer tuning or get another set.
Congratulations on solving your problem.

I have seen one or two at auction but don't remember the model number.
I gather they didn't make it for very long. (It is also possible that
the ones I saw at auction were someone using an SB-line case and doing
a very professional job of making a face plate for a home-brew tuner.
The 2040 and 2060 series show up on Ebay all the time.

> down, I could not key up the machine.

Chances are there is nothing wrong with either system. Operating 15 kcs is really too close for repeaters. Many of them are converted comercial rigs and the selectivity is not that good in many cases as they were designed for 30 KC spacings.

When the repeater keys up and you are 15 kc away from it , will it break the squelch of your rig ?

Learn how duplexers work before you open your mouth and say something wrong.
They do not have very much selectivity for very near frequencies. That is
while they have notches around 80 to 120 db to keep the receiver and
transmiters seperated, the first 100 kc or more has only a few db of
selectivity.

I sure do agree with this statement:

>"This (these?) newsgroup(s) is not a fair representation
> of ham radio. Ham radio is a whole lot better. Give it a try."

On our local repeater - hundreds of questions are asked each week and the
replies are helpful and courteous.
Discussions vary from tech ham Q and A, driving directions, attractions for
vistors, old car repair, welding, emergency procedures, repeater locations,
and much more.
On HF the same applies

Also we have a Ham Help net on our repeater weekly with 20 or 30 folks
checking in to ask and help with questions

Does your repeater have such a net ???

No. As a matter of fact, I tried to hear several VERY close
repeaters when +/- 15kc of their outputs. I heard none of them.

You're telling me a repeater is *supposed* to be *less*
selective than a Kenwood TM-271A?

P.S. Happy Thanksgiving.

Here in northern California, repeater spacings in the 2-meter band
seem to be about evenly divided between 15 kHz and 20 kHz, depending on
which portion of the band one is taking about. The local repeater
coordination council (NARCC) mandates the use of narrow-selectivity RF
and IF stages, and peak transmit deviations not to exceed 4 kHz.

The new Kendecom repeaters my group is in the process of putting on
the air, have an IF response which falls off of a cliff at 7.5 khz...
in fact these rigs are very prone to pop or squelch if somebody's
radio is tuned up too hot and is over-deviating past this point.

It'd be nice to be able to count on 30 kHz repeater spacing, but in
many areas of the country the 2-meter repeater subbands are just too
crowded to permit this.

Thanks Gary. I managed myself though. It was quite easy when I
really looked. In addition to the 3 screws holding the print card
there was a ring screwed on to the volume knob. When I unfastened
this the print card came looose nice and easy.

Changing the display was even easier. No soldering, no glue, it was
neatly clipped onto the print card. Off with the defect one, on with
the replacement display, some checking to ensure the whole thing was
clipped on right and voila, I had it all working.

Kind regards

# 6020. FS: sma-to-bnc custom fit rubber covered antenna adapter

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-26 00:22:40 UTC
From: gulyas@earthlink.net
Message-ID: <12235960.0411251622.2fb9c0f3@posting.google.com>
Source record: 18422
Cross-posted to: rec.radio.swap,rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.antenna

Do you have a need for a high-quality SMA-to-BNC rubber covered
factory look antenna adapter that is custom made to fit and protect
your H.T. or scanner radio?

Adapter allows you to:
Quickly change antennas to base, mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to antenna
changes.

Adapter features:
Gold plated contacts with a teflon insulator.
A low profile design with a rubber covering for a factory antenna
look.
The rubber base seals to the top of the radio with no spacers needed
for moisture and dirt protection.
The base also provides an excellent support for any length of antenna
or application.
No need to remove adapter once installed to make a quick and safe
BNC style antenna change.

Sizes to fit radio models:
Yaesu: VX-5R, VX-7R, VX-2R, VX-1R, FT-50-R, FT-60-R, VX-10, VX-150,
VX-110, VXA-100, VXA-120, VX-800, VXA-700
Icom: IC-T90A, IC-R5, IC-R2, IC-T8A, IC-T81A, IC-Q7A, IC-M1V
Kenwood: TH-D7, TH-G71, TH-F6A, TH-59, TH-K2AT
Alinco: DJ-V5, DJ-X3, DJ-S40
Midland : G-11
Maycom : AR108
Standard: C508A, C510, HX-460S
Uniden : Atlantis(marine)
Tate Orca : Excel
Radio Shack: HTX-200, HTX-400, HTX-245, HTX-420

Previewed in the May 2000 Issue of CQ Magazine, and the Nov. 2000
Issue of QST Magazine.

$11.95 ea. + $1.50 S+H(One to unlimited)

> 

I am not saying the repeater is suspost to be less slective, just that many are. Some (maybe alot ) of repeaters are converted from older comercial gear such as the GE Mastr ll series. They probably are not as selective. They met the comercial standards from 20 or so years ago. While there are probably not very many if any of the old VHF Enginering units in use today, they were fine repeaters for the money and for what was out about 25 or so years ago. I still put one on about 2 years ago while I took the other repeater off the air to do some work for a week or so.
While your Kenwood may be more selective than the repeater , try keying the thing for an hour or two in a shack that is about 100 deg F . The repeater has to be built to a differant enviroment than the rigs at home operate in. It might also have a 20 db preamp on it and the deviation may be lower.

I am not defending the repeater over your rig, just mentioning some things that the repeater owners have to compete with. Also look at the overall cost of the repeater, including the antenna and controler and duplexer. By the time some of the other items have been bought it may leave little money for the actual receiver and transmitter.

That's nice that your group can put the Kendecom repeaters on the air. In some areas there is not that much money for the whole system let alone just for the repeater.

<< I've recently acquired an Icom IC-745 and I'm unclear on how it's supposed to work in CW mode. It does receive in SSB and AM, so in general the receiver appears to work. When I press the 'mode' button to get it to CW mode, however, it's just... silent >>

Joel-

As others have already mentioned, the radio might have had the CW filter removed without replacing a jumper that was removed when the filter was first installed.

Someone else may have mentioned the possibility of a defective diode in the filter-selection circuit.

It is also possible that a crystal is bad in the circuit where USB/LSB/CW are selected. Newer radios use signals derived from the Phase-Locked Loop oscillator, but older ones had separate crystals for each mode. I don't know where the IC-745 falls. If you have another radio to tune to the frequencies of these crystals, you should be able to tell if one is not working. All three should be within about 3 KHz of each other.

I have already mentioned in another post that your problem may be unresolvable as normal phenomenon. In fact in the Greater Los Angeles basin are there are numerous repeaters on every frequency (CTCSS tone protection required) and it is considered "Liddy" to DX repeaters as it ties up local co-channel or adjacent channel repeaters. It should be noted that our co-ordination body inverts the input/output pair for adjacent 15 kHz repeaters for that reason.

Your best bet might be to use a 22 element or longer beam with greatly reduced power. I routinely keep the TS2000 set to 5 watts (lowest) rather than 100 watts and use a beam because I have some elevation.

For your peace of mind, I am a certified technician (NABR, GROL, PCIA) with many years experience with Motorola, Kenwood, Icom, Yaesu, BK, Midland and numerous proprietary systems. I can perform diagnostic testing and corrective adjustments or repairs of all key performance parameters, including before and after documented measurements for the mere sum of $50, ship to my address with prepaid return. Please ship in sturdy box, wrapping unit with microphone in order to provide a minimum of 3" of bubble or Styrofoam packing (no shredded or crumpled paper, it will settle in shipment). If there are serious malfunctions that would be beyond that flat rate, there would be no charge at all pending your approval. Payal is preferred because it works and provides card services that are safer than your local stores.

I personally perform and guarantee the work myself and that my time is not subsidized by crime, your taxes, or any conspiracy to subvert the US economy.

# 6031. FA: J.W.Miller AT-2500 Auto Tuner on eBay

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-27 00:48:03 UTC
From: Rick Frazier <rickf@rickfrazier.com>
Message-ID: <41A7CEEE.AAD6FA90@rickfrazier.com>
Source record: 18433
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Just listed for Auction on eBay: J.W.Miller AT-2500 Auto Tuner,
including the Bridge Coupler.
7 day listing with a low starting price and reserve well under recent
sale of another unit.

This is a fully functional unit from an era before everything was
controlled by microprocessors.

Real motors move the tuning capacitors and arrive at the SWR you choose
(from less than 1.5 to 3). It's almost fun to watch it alternately turn
the two caps. You wouldn't think it would ever find a match this way,
but it does so in a remarkably short time. You do need to set the
inductor to the correct range and push a green button, so it's not
_totally_ automatic.

This tuner was built well, and can easily handle 2500 Watts PEP without
strain.

eBay item number is 5734684133
<a
href=http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&rd=1&item=5734684133>5734684133</a>

More pictures and information also available at
http://www.rickfrazier.com/at2500.asp
<a
href=http://www.rickfrazier.com/at2500.asp>www.rickfrazier.com/at2500.asp</a>

Cleaning out the shack for an upcoming sale of the home, and keeping
only what I currently have in use (OK, so I got caught by the
microprocessor craze... I use an Icom 746pro, feeding an IC-2KL solid
state amp and AT-500 Auto tuner, with an icom 751A as second rig.)

Thanks
--Rick AH7H

hi,

I'm interested in the functionality/quietness of this power supply at
HF (40-10m). I'm thinking about using it with an FT-817ND.

I am after the operator and tech manuals for an IFR multimeter lid assembly
model MM-100E - commonly found on the later IFR Fm/Am 1000s and Fm/Am 1100s
series test sets.
I would also like to get the technical and calibration manual for the
Philips/Fluke PM97 scopemeter.
Thanks in advance for any help offered :-)

# 6041. Re: SWR meter calibration question - hooked up backwards?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-27 14:19:09 UTC
From: Ken Bessler <kg0wx@NOSPAMyahoo.com>
Message-ID: <u10qd.6747$3I.6202@okepread01>
Source record: 18443

I have a MFJ 864 SWR/power meter. It has
two main circuits - 1.8-60 mhz & 144/440 mhz.

I'm working on the HF section, trying to make
sure it's correct. I have a known good power
meter and a 1:1 load.

If I set the forward power to 5w, can I get away
with hooking up the meter backwards to read
reflected power?

I set forward power to 5 w then reversed the
connection and adjusted for 5 w reflected.

Is this ok?

# 6050. Ham Radio Deluxe v3.1b released

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-27 15:57:34 UTC
From: igoruberwald@home.nl
Message-ID: <e9b53b2a.0411270757.232e291c@posting.google.com>
Source record: 18352

Greetings, one and all!

The Ham Radio Deluxe Development Team is pleased to announce the release of Ham Radio Deluxe v3.1b as of today.

The major changes are the addition of Icom PCR1000 support, sat tracking for teh FT-847, a re-vamped satellite tracking window - now called Ground Control - a bandscope (use a narrow filter and fast AGC for this option!) and Cabrillo format support for the logbook option. Lots of other detail work has been carried out, and you will find full details of changes since v3.0 at:

http://www.ham-radio.ch/forums/viewtopic.php?t=1725

Remember: Ham Radio Deluxe is FREEWARE - by radio amateurs for radio amateurs.

http://hrd.ham-radio.ch

and

http://www.ham-radio.ch/forums

for more info.

<< If I set the forward power to 5w, can I get away
with hooking up the meter backwards to read
reflected power?

I set forward power to 5 w then reversed the
connection and adjusted for 5 w reflected.

Is this ok? >>

Ken-

If I understand you, you want to use the SWR bridge function of a combined SWR/Wattmeter to read reflected power. It would appear that you have a five watt range, and you want to calibrate the SWR-reflected function for five watts as well. If you adjust the "calibrate" for full scale with five watts into a good dummy load, the "reflected" function should (hopefully) be calibrated as well. If you reverse it, reflected should now read full scale.

On the surface, it appears this will work. You should use your "known good" power meter to check the lower power levels of the meter, since a diode detector's linearity is poor at low levels. The low end of the meter's power scale may favor higher power levels, unless it was intended for use with 5 watt CBs!

If you don't already have information about the relationship of SWR and power readings, the Bird catalog has some good information. They may also have it on their web page, http://www.bird-electronic.com/.

Thanks Bob, that works! So the problem was that the narrow filter is
missing. :-( Oh well; not that big of a deal.

Thanks to everyone for suggestions.

# 6054. For Sale Or Possible Trade IC-756 EXTRAS

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-27 20:45:42 UTC
From: Daniel W4ADT <danielw4adt@alltel.net>
Message-ID: <3l5qd.15$Wu6.13@fe39.usenetserver.com>
Source record: 18356
Cross-posted to: atl.forsale,ga.forsale,rec.ham-radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.radio.swap

ICOM IC-756 HF RADIO
For Sale a Very Clean, ICOM IC-756 (This is NOT the PRO version.) This very nice radio has all stock features. It has had an easy life in a no smoking home and used mainly on 6 Meters.
It comes with the original Microphone, Power Cable, Manual, and Box. Extras include FL-101 9MHZ CW/RTTY Filter and UT-102 Voice Synth. Also have matching PS125 Power Supply it too is in almost new condition.
It is fully functional. Just to remind all it is 100 W from 180 through 6 meters.
EMAIL me directly as to what you have for trade, lets see if we can come up with a trade. I value my station at $975.00.
We can alway schedule a SKED so you can hear the station live on the air, or if your local you can also set up a time to see the station. Pictures are availble on request!

73 Daniel W4ADT

There's something you might try to narrow the CW bandwidth on your
745:

On my Icom 735, when in the CW mode, and while using the the 2.3 khz
SSB filter to receive CW, the passband tuning knob operates as a
variable bandwidth filter! If I twist it all the way to the right, the
bandwidth is 2.3 khz. And if I twist it all the way to the left, the
bandwidth is narrowed to as little as 800 hz.

I don't know if the 745 works the same way, but you might give it a
try on a crowded CW band and see if there's a narrowing effect.

And without the rubber, the flex and bending of the antenna gets directly transferred to the sma connector. You'll be wishing you'd had some sort of support before long, as the rig is in the shop with a broken sma connector. Stephens connectors work well, I've had one for years, and think it was one of the smarter accessories I've purchased. (Ft-50)

What are "Stephens connectors" ?
Any pics and where to buy ?

Thanks,

Nick

# 6060. WTB: mic gain control for Collins 32S3 transmitter

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-29 02:17:18 UTC
From: k9sqg@aol.com
Message-ID: <20041128211718.11425.00001204@mb-m29.aol.com>
Source record: 18362

Thanks for reading this posting. I'm looking for hens teeth in the form of the mic gain pot for the 32S3 transmitter. It is a dual section pot with 500 K on one section and 2500 ohms on the other. The switch is closed when fully CCW, not open like most switches. I've already taken out a second mortgage in the event I can find one of these...

73s,

Evan

Cushcraft Vertical HF MA5V Antenna
http://www.cushcraft.com/amateur/details.asp?catid=92

Bought new and installed a year ago. Nice antenna, works fine. Just didn't use it much. I took it down this weekend, and its all assembled and you will need a pickup truck with a long bed to haul away. They sell this item for $230 new.

Price: $100

Location: Plano Texas, near Hwy 75 and Parker Rd exit.

Call: 972-881-2997 or email.

# 6066. FS: Hallicrafters "twins": SX-117, HT-44, PS-120/150

For Sale:

Hallicrafters SX-117 receiver, HT-44 transmitter, and
PS-120/150 speaker/power supply. Gear is clean and in
stock condition. Receiver is working, has new filter
caps, and all tubes are good. I have never powered up
the transmitter or p/s. Manuals are included for all
three pieces. I believe the cabinets on the receiver
and transmitter have been repainted, but I can't recall
for sure (I'm at the office right now). Regardless,
they look presentable as-is. See photos here:

http://www.qsl.net/k5dh/images/sx117.jpg
http://www.qsl.net/k5dh/images/ht44.jpg
http://www.qsl.net/k5dh/images/ps150-120.jpg

Images will probably be very slow to load, so please
have patience.

This would be a good winter project for someone! I have
too many projects and not enough time, so my loss will
be someone else's gain!

Price $400 plus shipping from Dallas, TX

# 6067. FS: Heathkit SB-200 linear amplifier

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-29 17:28:50 UTC
From: k5dh@raytheon.com
Message-ID: <m%lqd.6$YX.2@dfw-service2.ext.ray.com>
Source record: 18373
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

For Sale:

Heathkit SB-200 linear amplifier, with original manual.
In good cosmetic condition, not perfect. Power supply
has been rebuilt using all new caps, diodes, and bleeder
resistors. Has a Standby/Operate switch added to the
front panel (same kind of switch as the On/Off switch,
almost looks like it came this way!). Amp works fine
on 80 through 15 meters, but doesn't work on 10 meters
(plate current is low, and it peaks instead of dipping;
no desire to troubleshoot it). The Loading cap is not
original, but it works. I have an original part that
I will include. Tubes are good, power output with 65
Watts drive is about 750 Watts PEP on 20m. I've owned
this amp for several years and it has worked great for
me (except on 10m, as noted above). I've upgraded to
an AL-80B, so this one must go.

Price $250 plus shipping from Dallas, Texas

See photo here:

I'm no expert on the Realistic PRO-2006, but that is ineed what it seems to be (a scanning receiver - see: http://www.universal-radio.com/used/sold028.html compare the back panel picture to yours).

It would appear that someone did a little modification so that it could be controlled via an RS-232 computer interface and then tapped off the audio to run to their stereo system.

There are apparently a number of modifications for the PRO2006 that you might look at by doing a Google search for PRO2006 modifications (most just involve opening up the receiver for the cellular frequencies). At first glance I didn't see any that involved a RS-232 link.

# 6092. Help With Cushman CE-4 Plugins

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-30 17:42:31 UTC
From: "Michael D. Harmon" <mharmon@att.net>
Message-ID: <bi2rd.75490$7i4.69734@bgtnsc05-news.ops.worldnet.att.net>
Source record: 18393

Does anyone out there have a list of which plugins are compatible with Cushman CE-4/4B service monitors? I have a chart which shows plugin compatibility for the CE-3, 5, 6, and 7 service monitors, but there's nothing there which references the CE-4.

Thanks for any help you can give.

## 6094. QPak tuner comments/reviews?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-11-30 19:47:48 UTC
From: David Snyder Hale <david@isi.mtwilson.edu>
Message-ID: <coiip4$10sn$1@agate.berkeley.edu>
Source record: 18396
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

I haven't been able to find any reviews of the Miracle QPak antenna tuner. Does anyone have experience and comments?

Their web page makes it sound like they are finally bringing amateur radio out of the dark ages of tuners, but is it all that?

For Sale: Cushcraft two meter 17B2 17 element BOOMER antenna.
Have you ever ordered something from the cheese and sausage catalog,
and once you got it, the food looked A LOT smaller in real life than
in the catalog?? Well this antenna photo was THE OPPOSITE. It is
BIGGER than the photo! Hi. I have tried EVERYTHING on my small lot to
get enough area. Just too many trees to cut down, and not worth the
price of hiring a tree service. I am just going to a smaller beam.
THIS WAS NEVER USED! It is assembled, if you want to pick up and haul
back on a flat bed. Otherwise, we will dismantle and put in original
box. New its around $275 plus shipping. I will let go for $199 plus
$14.95 shipping. AND I will toss in one of my Yo-Yo-Deluxe Portable
Dipole antennas, too! ($29.95 value...FREE!) You are welcome to call
and use your plastic through my companys merchant account. (DWM
Communications - http://qth.com/dwm) 73 - Bill - WA8MEA -

Hey "Whoever" don't worry about it. You didn't do anything wrong. Sounds like "MS FLINT" is just having a wrong time of the month moment. Your comments were sound and well thought out. Most women in ham radio are fat greasy pigs anyway. Just look around at the local events and check out the "ham guwrls"

To answer your question the nocode wonders want a license but not the knowledge. They get a vanity call to feel more like a real ham. Then they go back to the cb band to tell the other idiots how smart they are. The codeless wonders will ruin this hobby and there is nothing we true hams can do about it.

DR AL Link has re-done the UREGs equipment condition numbers and IT WORKS....Take a look at ..... <http://www.uregs.org> Read thru it! It will lower your numbers a little but will allow very honest judgment... Im thinking the traders nets out here in Texas will use it. It turns all my 8.5 radios into 8-'s but thats ok as long as we all know what it meants...quickly an 10 is NEW UNOPENED a 9 is AS NEW Opened but virtually UNUSED...aka mint. and 8 is Excellent, no scratches or scuffs... and so on.. Take a look , this will work if we all adopt it, it also has the workings covered....73 Murray

# 6106. Disassembly Help needed, MC50 Mic

Newsgroup: rec.radio.amateur.equipment
Date: 2004-12-01 12:25:35 UTC
From: John <john-1@w3zdf.org>
Message-ID: <66erq0dms0mbusf79aa5t6co350t4qe9uu@4ax.com>
Source record: 18308

Yo all,

I want to repace a bad element in a Kenwood MC 50 mic.

Question is:

How do you get to the element? The element grille looks
like it may have threads but I cant seem to unscrew it,
and I dont dare use a pipe wrench for fear of damaging
the grille...

Maybe a special tool is used? Anyway thanks for your help.

john aka w3zdf

# 6107. Re: FS: sma-to-bnc custom fit rubber covered antenna adapter

Newsgroup: rec.radio.amateur.equipment
Date: 2004-12-01 17:42:09 UTC
From: Bob Dixon <dixon.8@osu.edu>
Message-ID: <dixon.8-FFF57F.12420901122004@charm.magnus.acs.ohio-state.edu>
Source record: 18309
Cross-posted to: rec.radio.swap,rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.antenna

Adding any adaptor would seem to significantly move the radiating
portion of the antenna further away from the "ground plane" of the radio.
This should affect the operation of the antenna adversely. Comments?

Bob

Adding an adapter to a Transmission Line will have no effect, except to
add insertion loss of the adapter. Adding an adapter to the antenna
itself MAY cause the antenna charactoristics to change. Most SMA and BNC
connecters are used in Transmission Lines, and not antennas themselves.
The OP doesn't really explain where the adapter is to be used. Most
small handheld devices with external antenna connections have those
connection in the Transmission Line and not in the antenna itself.

John,

Use a hair dryer to soften the adhesive in the threads of the mic head.

What makes you think the effect should be adverse? When you consider all the different radios that a given antenna could be connected to, the change from radio to radio is going to be far greater than what a 3/8" adapter is going to do (consider its electrical length at 2m...). In fact, I would hope that most HT antennas weren't meant to be used with counterpoises, but now that I think about it, I don't really know whether or not that's the case. Anyone?

I mean... the radiation pattern of a wire cut 'to length' stuck into a BNC connector on the top of an HT is going to be very seriously distorted relative to the same wire above a near-infinite ground plane.

Cell phones often use sleeve dispole antennas to avoid the need for a counterpoise...

There was a device (since outlawed) called a Digital Data Interceptor
(DDI) which worked between a scanner and PC to decode AMPS cellular
control data. It would also decode ESN exchanges. I beleive it would
also enable an RS232 equipped scanner to track voice calls.

I bought one over a year ago, It was in perfact shape, with all the
innards intact and clean. It also had all the filters and works great.
It is a fine rig that can be used as fixed or mobile.
Good luck.

If you do have Single Sideband (SSB), there will be either a 'Mode' switch,
or a 'SSB' switch on the radio. If it doesn't have this switch, then it's an
FM only rig.

Well if the rig is capable of SSB -- there should be a control that allows
you to select: USB/LSB -- FM -- CW -- maybe AM
i.e., an all mode

Otherwise look at the ICOM site for specs
http://www.icomamerica.com/amateur/

OR go to e-ham reviews URL:
http://www.eham.net/reviews/

Next time include the ICOM model number -- helps us to respond to you

73 and Happy Holidays

A simple inverted-L (a vertical wire plus a horizontal wire), of no particular length is about the best you will ever have. The higher the better. You will need a ground connection such as half-dozen, shallow-buried radial wires, between 10 and 20 feet long. Include any metal water pipes with the radials.

An overall wire length between 100 and 150 feet does better on the lower HF frequencies and on the MF broadcast band. Between 40 and 100 feet does better on the higher frequency HF bands.

Who needs a model number? It either has a mode switch or it doesn't! That
was already stated and is "enuff said".

I have used both the inverted L on 160 meters with great results plus it performed great on other bands except 40 meters. My personal favorite is the center feed double extended Zepp feed with open ladder line and a good antenna tuner or matchbox. If its cut for 80 meters it exhibits about 3 Db gain over a standard dipole, same hold true for forty meters. The forty meter Zepp operates similar to a 80 meter dipole. The higher in frequency the lobes get interesting and exhibit gain in certain directions.

I have worked all over the world using 100 watts on 80 meters through 10 meters including the WARC bands.

A Extended Zepp center feed is one of the best keep secrets. Good luck

psst, it was Soviets who did more to defeat Germany than all the other
Powers combined. With a fair amount of material aid from the U.S., yes, but
it was their blood. And, no, I am not belittling the sacrifices made by U.S.
troops. My father fought in Africa, Sicily, Italy, France, and Germany and I
have his Sliver Star, Bronze Star, Purple Heart, etc. as a proud reminder.

My "secret antenna" is the Windom.

44 feet (13m) of wire on one side, 88 feet (26m) on the other side, fed in the center with a 4:1 balun. (many hams use some flat twinlead between the feedpoint and the balun, allowing the balun to be fastened to a pole or something to avoid the physical straing at the feedpoint)

Works without a tuner on 80, 40, 20, and 10 meters, and with the autotuner on most rigs on 15. And it's effective. And easy to build!

Actually it was the Japanese that caused Hitlers defeat. Think about it.
If Japan would not have attacked the USA, Hitler would not have had to
declare war on the USA. Which would have given him a year or two more to
work on the USSR. And maybe, just maybe, hold onto Africa and thus giving
him a serious shot at winning it.

But...the USA came in and gave him another front to contend with. Basically
the Allies got lucky.

# 6136. NEED YAESU FT-736R parts

Newsgroup: rec.radio.amateur.equipment
Date: 2004-12-03 13:51:34 UTC
From: "Jose V. Gavila" <eb5agv@ctv.es>
Message-ID: <41B06F66.8020505@ctv.es>
Source record: 18340

Hello!

As a gift for Christmas (yes, a bit early one, I know :-)! ) I have got a Yaesu FT-736R which, sadly, has seen better days.

Good thing is that it came loaded with some extras, as the FVS-1 voice unit and FTS-8 CTCSS unit (which lately is selling at about US$150 at eBay). It has also the 1.2GHz module fitted. And internal power supply, after some work on it (usual cracked solder joints), is also working.

Bad thing is that it has scratches all around the front panel and one digit of the display is gone. I have checked circuit and culprit is a large SMD circuit which manages, among other things, the VFD display. As most of these units, it is a time multiplexed display. What is faulty is the enable signal in the bad digit. I have checked it and, if I connect that digit to any other enable line from other digit, it works fine.

So I am looking for a front panel and also a DISPLAY UNIT PCB. A set of knobs would be also interesting. I would take a complete FT-736R if necessary.

Please, let me know if you can help.

Best regards,

JOSE

PS: I have thought of doing a little hack in the display circuit, generating the missing signal using the previous digit enable as a trigger. This signal is a 1 ms width pulse, which is -32V iddle and +5V when active... any hint welcomed!

Gang,

I've been trying to find my manual for my AEA MM-3 MorseMachine, and have been unable to find one on the net. Does anyone have an electronic version they could send me or point me to? Alternatively, if I could ask a couple of specific questions about some commands that aren't on the label on the front, that would be a big help.

Thanks,
Dave

The Scots wouldn't have even had to fight - just the sight and 'sound' of
them coming would have been enough.

Guys,,
One of my Boy Scouts radio's died.
It is an FT-10 Yaesu handheld. (Similar to the FT-50)..
It appears that the radio just won't turn on.
Is there an internal fuse inside??
Perhaps one of you guys who repairs this can give me a clue where to look.

I have for sale a Tempo 2020 HF Transceiver. This transceiver was made by Uniden in the late 70s. It is all solid state except the 12BY7A driver and two 6146s in the final. This one looks new. It obviously has not had much use. The receive function works great, but I can't get anything out of the transmitter. Price is $125.
Thanks, Charlie Hugg, K5MBX

ok,
purchased a "new" (used) motorola converta-comm (model N1244A) which appears
to work fine for receive, but the transmit circuit does n;t appear to work
(key the mic and no action).

request is simple:
1. request full schematics of this device
2. request parts source info (if relevant)
3. request complete specifications on this unit otherwise

my e-amil is posted below (munged).

someone please help here....

<snippety>

That would be the CVC for the MX300 series. The manual you need is
Motorola part number 68-81010C75.

Unfortunately, this number no longer appears in the Motorola
database. I can only conclude that it is no longer available.

One thing I should point out: If there is an orange wire coming
from the plug on the back of the unit, it may need to be connected to
your +12V line to enable transmit. It is also possible that your
microphone is screwed up.

As for a manual, you may want to check with
http://batboard.batlabs.com, and you may also want to do some digging at
hamfests in your area.

Happy hunting.

>
> Me

That is actually not quite true. On an HT, the transmission line ends
somewhere inside the radio. The SMA/BNC connector is part of the
antenna proper. If you add a sleeve (as the previous poster, "dixon",
says), you will be changing the antenna itself. ASCII schematic follows:

before:

```
|
| antenna
|
|
_ ground + bnc/sma
||
|| coax from PA strip
||
||
```

after

```
|
| antenna
```

```
|
|
||
|| shielded antenna (adapter)
||
_ ground (bnc
||
|| coax from PA strip
||
||
```

And as we remember, "maximum radiation at the current maximum" (that is, the base of a classic 1/4 wave antenna), you are shielding the point of maximum radiation.

From a practical standpoint, you will probably be using a gain-retarded rubber duckie, and the 1 or 2 dB loss from even the worst adapter will be swamped by the -10 dB gain of the duck (that is "minus 10 dB gain"). The rubber-duck will make a 5 watt transmitter sound like a 1/2 watt one. Having another 1 dB of loss will make that 5-watt radio sound like 0.4 instead of 0.5. No big deal.

If you can keep your radio from being broken by using a quality adapter, and with a negligible loss in performance, I say, "do it."

If you are talking about squeaking out every last bit of signal, such as EME, the answer is "no". But if you are talking about walking around a hamfest on 2m, then spend a few extra bucks to keep from fracturing your antenna connector connection, which these days, most hams can't, or don't know how to, fix. <flames invited>

Your mileage may vary.

I have for sale a Yaesu FT-857 with the DSP installed This Transceiver is about a year old and has less than 10 hours use. I am the original owner. It performs flawlessly. Included are all original equipment ,box, packing, original mic and mounting bracket, mounting screws etc. Price is $575 plus shipping from 79602.

Also for sale is a LDG AT-11MP Antenna Tuner purchased less than a year ago, also with l0 hours use, with original box and manual, Price is $175.

Also for sale is a W4RT One Touch-Tune control for the AT-11MP. It works with the FT-857 or FT-897. Price is $40.

Price for Package is $775

Thanks, Charlie Hugg

# 6166. Kenwood TM-D700A Missing 913 - 939Mhz

Hi All,

I got a new Kenwood TM-D700A, and notice the 913 - 939 approx is blanked
out, mainly to protect the US cellphone bands from being received.
I am in New Zealand, and we have 921 - 929Mhz are a ham band.
I would like to know if it is possible to see this part?

Any help or advise would be grateful.

Regards

Kevin, ZL1KFM.

Source record: 18271

I just bought an Icom handheld VHF IC-F51 (IC-F50 in US). I am desperately in search for CS-F50 sofware and OPC966 cable for programming new frequencies to this unit. I found an American company not willing to sell to me because I didn't have an US registered credit card. That was RadioOutfitter.com. Stupid. I live in Norway, and Norway is not known for credit card frauds etc.

Anyway... Can someone help me with this matter? Downloadable software and schematic for cable will also help me.

Please also reply to emvsat@email.com if you can help.

Thanks in advance!

http://www.emc2005.org

The Yaesu FT-50 seems to have a history of a bad power button. I know of three users who had to have it replaced by Yaesu. It wasn't cheap. One managed to keep the contacts working by using a carbon powder for a few months, but eventually had to bite the bullet. Other hams may have a more satisfactory answer, but I _think_ this might be the symptom you are dealing with.

Source record: 18273

At 29 minutes past the hour on 147.435 simplex
I'm hearing a weak string of 4 DTMF tones. At first
I thought it was someone's remote link but then I
heard this transmission over a much stronger 2m
simplex QSO in progress. There was no hetrodyning
as if 2 signals were coming in at the same freq - the
DTMF string mixed with the S9+60 operator as
if the two signals were mixing with an audio mixer.

I'm convinced that I'm hearing an "image" freq but
from where? My rig is a Kenwood TM-271A with
a 1st IF of 49.95 mhz and a 2nd IF of 450 khz.

I used to know how to rx strong signals outside my
reciever's range by listening to the image but it's
been years and I've forgotten how to do the math.

Is it 2x the 1st IF + the VFO freq? If that's the case,
then the offending signal would be at 247.335 mhz.

Help?

Ken KG0WX

>
> Ken KG0WX

Yep, you did it right -- if the L.O. is on the high side.
And, it probably is -- with a 49 mcs IF.

Or, "VFO" - (2x 1stIF) = 47.535 mcs. -- if the L.O is on
the low side: 97.485 mcs in this case. (A low side L.O.
could probably be confirmed using a nearby BC FM radio...)

It could also be == 1st IF, too. I.e., a Very Strong
sig on/+/- 49.95 mcs.

But, in both the 47 and the 49 mcs cases, it would need to be
a Very Strong signal to overcome what should be Very Heavy
front end filtering for 1st IF interference in the rig.

Even more frustrating, it could be some combo of inter-mod
with some (also) unknown 3rd freq. (carrier) involved.

Test with a rig with a different 1st IF.

You missed my point, I think. The counterpoise is the (poor) metal of
the radio and of the user's hand. Any connector/adapter will be coaxial
and probably low loss, but the counterpoise stays put. The feedpoint
rises but the "ground" plane does not. For an SMA adapter, it might not
be enough to hear a difference, but the radiated signal will be worse
when using such an adapter.

I'd say "may be worse" rather than "will be worse". In some cases, it
may be better.

From what I've seen (and measured) the actual impedances,
"counterpoise" effectiveness, etc. of HT antenna setups vary all over
the map, and change constantly depending on a whole bunch of
factors... how you grip the HT, whether you happen to be wearing a
glove, how you angle the HT near your head (antenna-loading effects
from the head can make SWR change dramatically), and probably whether
you're sweating or not.

A typical HT case is almost certainly _not_ serving as a tuned
counterpoise at 2 meters, nor is your arm and body.

Adding a centimeter or three of SMA-to-BNC connector to the length of
the "counterpoise" may have some small effect in some cases, but I
believe that [1] it's as likely to work for you as against you, and
[2] it's probably less than the sorts of impedance variations which a
typical HT has to face every day as it's moved around the user's head
during transmission.

Not to mention the fact that the reason you're adding the adapter is most likely because you are putting a better antenna on the HT. I doubt what you *might* lose by moving the feedpoint away from the "counterpoise" is not as much as you gain by changing the antenna; otherwise, why bother? At higher frequencies this may not be the case, but probably not within the realm of a dual-band HT.

I've been using the Gulyas adapter for years now. I use it primarily for attaching a Smiley 270 telescopic whip to my VX-5, since that antenna works very well configured as a 5/8-wave on 70cm. The relative gain in performance over the stock antenna is quite noticeable, so in that case, the adapter causes no problems. The fit and appearance of the adapter on that rig is great, too!

Tell me, specifically, in which cases that my info would not be true. I made some measurements before I posted. Did you?

I was just saying that extending the feedpoint / current node, as was suggested, will lower the radiated power. I measured field strength measurements and then posted my results.

I still feel that the more aluminum in the sky, the better. Even if there is some loss in adapters... mmmm.... bigger antennas, happier hams.

An Echolink RF node perhaps? Many are ran on simplex frequencies, and a DTMF code will bring-up the node.

# 6189. Re: FS: sma-to-bnc custom fit rubber covered antenna adapter

Newsgroup: rec.radio.amateur.equipment
Date: 2004-12-07 03:41:08 UTC
From: Roy Lewallen <w7el@eznec.com>
Message-ID: <10ra9ipomik1v28@corp.supernews.com>
Source record: 18291
Cross-posted to: rec.radio.swap,rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.antenna

A few themes have shown up on this thread that seem to reinforce some misconceptions about antennas. They might not have been meant that way, but I think it's a good idea to clarify them in case a casual reader might drop by and be misled.

The first one is about where the "transmission line" ends and where the "antenna" starts. The antenna starts at the point where the two current carrying conductors move far enough apart for significant radiation to take place. By way of illustration, let's take the example of a simple vertical mounted on a perfect ground plane. We'll feed it at the bottom via a piece of coax. It doesn't matter where the coax is, above or below the ground plane. Inside the coax, there's current on the outside of the inner conductor, and an equal amount, flowing the opposite direction, on the inside of the outer conductor. The fields from these two currents cancel everywhere outside the coax, so it doesn't radiate.

At the point where the coax connects to the antenna, the current from the inner conductor flows up the antenna. The (equal) current from the inside of the shield flows over the ground plane, spreading out from the point where the shield connects to the ground plane. The currents are now physically separated, so their fields no longer cancel, and net radiation can result.

An important feature of this setup is the effect of the current flowing along the ground plane. For every bit of current flowing outward in one direction, there's an equal bit flowing outward in exactly the other direction. The fields from these two bits of current cancel at right angles to the directions of flow. When you look at all the bits of current, you find that the net field from the whole amount of current is zero. So the current on the ground plane doesn't result in any radiation. (By contrast, the current on the antenna wire doesn't have any cancelling current, so it radiates.) A conductor which carries current but doesn't radiate (significantly) is often called a "counterpoise". Misuse of this term is another problem with some of the postings, and I'll address it in a minute. The important thing to remember is that a "counterpoise" doesn't radiate significantly. If it does, it's not a "counterpoise" but a part of the antenna.

What happens if we put a piece of pipe around the bottom, say, 1/4 of the antenna, weld it to the ground plane, and connect the coax shield to its inside? Now the pipe is an extension of the transmission line. The portion of the antenna inside the pipe is the center conductor, and the pipe is the shield. So the portion of the antenna inside the pipe can't really be called an "antenna" any more, since it doesn't radiate.

The current on the inside of the pipe reaching the top of the pipe flows over the edge and down the outside to the ground plane. Here's a very important point: *This current radiates just like the current on the antenna wire*. What we have now is a lopsided dipole. The antenna wire protruding from the top of the pipe is one side of the dipole, and the outside of the pipe is the other. The "feedpoint" is where the wire sticks out of the pipe. Once the current along the outside of the pipe hits the ground plane, it spreads as before. The current on the outside of the pipe radiates, the current on the ground plane doesn't.

A statement was made about a situation sort of like this "shielding" the "high current" part of the antenna. This isn't what happens at all. What happens is that the portion of the original antenna wire inside the pipe is no longer an antenna at all, but part of a transmission line. The current on it isn't the same as before the pipe was put there. The radiating antenna is now the portion sticking out of the pipe, and the current at its bottom, all other things being equal, will now be greater than before the pipe was added. No signal or power is lost due to "shielding". All you've done is shortened the antenna a bit, just as though you'd cut a bit off the top.

Now let's remove the pipe and bend the ground plane downward into a cone, with the antenna sticking out of the cone's apex. Here we'll find that the current flowing on the ground plane does indeed radiate. There's no net radiation straight up, but it radiates horizontally and in all other directions. The ground plane is no longer a "counterpoise", but simply a conically-shaped dipole half. If the ground plane radius was about the same as the "antenna" length, and the ground plane is bent downward at a reasonably sharp angle, the radiation from the conical ground plane will be about the same as the radiation from the "antenna". Calling it a "counterpoise" doesn't give it magical properties so we can ignore it -- it's every bit as much a part of the antenna as the "antenna".

Finally, consider an HT. Here, one half of the antenna is the rubber ducky or other "antenna". If you put a sleeve over part of the outside of it, the real radiating top part of the antenna is the part sticking out of the sleeve. The other half of the antenna -- NOT a "counterpoise", but a real part of the antenna of at least equal importance to the intended part -- is the outside of the sleeve, and the outside of the HT, your hand, and your body. Whatever current flows up into your "antenna" also flows along the other half -- that is, along the HT and your body -- and radiates.

Roy Lewallen, W7EL

hi there
I wonder if anyone can help me .
I used to use a FARNELL L30 .05Ma power supply
for charging my nicads, very useful due to its current limiting
control however its quite old and unfornutally I have a problem with it
R27 has burnt out and I don't know what value it was
As its burnt and broken. and thus stopped working

and the large 1-ohm resistor dropped off with the heat
when the supply was accidentally short circuited
( Not by me I but a friend. bugger )
I think it solders to the collector and emitter of the
oc36 can anyone confirm this ?

does anyone have a circuit diagram or a service manual
or can simply inform me what the value of resistor R27 is?

hope to hear from you soon
thanks

# 6212. Wanted (to buy): 2 meter power amplifier...

Newsgroup: rec.radio.amateur.equipment
Date: 2004-12-08 00:06:52 UTC
From: "Arthur E. Sowers" <advocacy@sdf.lonestar.org>
Message-ID: <Pine.NEB.4.61.0412072350440.27134@sdf.lonestar.org>

I need an aligator 2 meter amplifier for FM ragchews with people I've known for a long time but are now at a fringe ground-wave distance since I moved away from them. I'm talking about 300 (min) to 500 w output, and something like a pair of 4CX250bs in PP. The older ARRL handbooks have a pair of 4-125 in PP power amp which would be OK and I'd consider building one if its not a bear to tune, adjust, or neutralize. I also hear there are some affordable Russian metal ceramic tubes out there (one of the recent ham magazines) and I'd love to hear from anyone who can tell me if buiding around any of them is feasible and practical. Lastly, I think its Command Technologies or something like that that has a high power amp for 2 meters (using metal ceramic tubes) but I can't afford or justify their prices. Do the big brick amps hold up? My 80 w out LUNAR amp still works but my RFConcepts 160 out amp melted down. Several times.

The conventional answer to the above problem is to recommend more elements in the antenna and/or higher placement of those elements. For additional reasons beyond the scope of this post, neither of these options is, at this time, practical for me.

I'd appreciate hearing from anyone who has an old 2m aligator amp (working and stable) they would like to convert to cash. Or, if they have any other bright ideas (we're not going to get into satellites or Echo Link stuff, either).

I may not check my email inbox right away, so don't expect quick answers. Also, we don't take telephone calls when they ring and would prefer just sending an email to the address I am sending from.

73,

Art, W4PON
I'm in southern Delaware.

I do not have any such thing, but Fair Radio currently has a bunch of high power VHF aircraft sets. Some of them are just linear amps (and they have to be linear since this is AM) and some are full transmitters with plate modulation. Either one of them could probably be hacked up into 2M amp duty. The finals need to be retuned. I don't know what extent you'd have to add extra trap stuff if you were to move the bias point down, but hell, you can run FM through the class AB amp and throw away some power.

The aircraft VHF stuff is basically a glut on the market right now because there are a lot of upgrades going on, and the old gear is all AM and not very useful for ham service without some hackery.

Good point Bill, but remember that the Russians were using alot of U.S. goods in their efforts to defeat Nazi Germany. If it werent for the U.S. Merchant Marine they would not have had the initial supplies to keep up the fight.

I believe it was a total team effort on all parts. No one nation should take ownership of the overall defeat of a tyrant or a tyranical government of the time. Each had their own reason for entering and fighting and that is what should be respected.

> Paul AB0SI

I probably shouldnt bring this up but remember that the soviets did sign a
non-aggression act/treaty with nazi germany. They were only brought into
the war based on Hitlers ignorance in attacking them. Had he not broken
the treaty I would find it hard to believe that they would have entered
and sacrificed so many and and so much for the "western" powers. Remember
nazi germany just about took stalingrad.

# 6217. Looking for ATV Repeater Equipment

Hello . I am in the process of putting Out local AVT repeater back on and
Looking for ATV Repeater Equipment .
Any INFO would be of help.

List:
Horizontal omit antenna
VSB Filters
Link rec & tx
ETC.

Thanks
Dave

They didn't "sacrifice .......for the western powers." We didn't sacrifice for them. Heck, we were not even formal allies (the official term was "associated Powers"). I never mentioned motivation. There seems to a common bad habit of associating "goodness" on one hand and "bravery" and "sacrifice" on the other.

yep. tried everything.

However, there appeared to be 1 wire on the harness that had been trimmed
before I got it. replacing said wire and wiring to +12 volts solved the
problem (unit now works).

thanks guys

What an ASS!

I realize that very few in the UK have the twisted view that you express.

However A crowded country smaller than the state of Oregon, Deeply in debt,
Population about 1.5 times that of California, is not a threat to the US.

Lets see, population is 60,270,708 in UK, vs. 293,027,571 in US.
So your out numbered 5/1
17% of your people are below the poverty line.
Median income is abt $10,000 les than the US.

Your almost entirely unarmed, Treated like children by your government.
You have no Constitution nor a bill of rights.

--
Be not afraid of any man
Who walks beneath the skies,
For be he tall or be he strong,
I will equalize.
- Samuel Colt

--
Laws that forbid the carrying of arms...
disarm only those who are neither inclined
nor determined to commit crimes...
Such laws make things worse for the
assaulted and better for the assailants;
they serve rather to encourage than to
prevent homicides, for an unarmed man
may be attacked with greater confidence
than an armed man.

--- Jefferson's "Commonplace Book,"
1774-1776,
quoting from On Crimes and Punishment,
by criminologist Cesare Beccaria, 1764

Sir Walter -- your "Revocation of the USA independence" is priceless -- UK satire at its best.
Bennie Hill would be pleased. Deserves a place on the USA Comedy Hour TV show.

From the responses so far it has gone over the heads of most of the responders.

However tell your tax collectors not to wear red coats this time and don't bother to send HMS Serapis.
We have a new ship -- DDG-53 USS JOHN PAUL JONES

And from the declaration of independence:

"We must, therefore, acquiesce in the necessity, which denounces our Separation, and hold them, as we hold the rest of mankind, Enemies in War, in Peace Friends.'

Um...let me give you a "english translation" for the "shop talk". The word
"alligator" means a pretty hefty power level. The "2 meter" part means the
2 meter amateur band. Most hams know this means the 144.000 to 148.000 mHz
range of frequencies. "What would the meters display?" Well, that's your
question since its pretty clear you don't have what I'm interested in.
But, one possibility I'd be interested in would be a homebrew job that had
at least grid and plate current panel meters, but a builder could have put
in a rotary switch to connect one panel meter to different parts of the
circuit. Ever hear of a D'arsonval movement?

Switching wall warts I have tried introduce a loud "hash" that
completely hides weak signals; transformer wall warts I have tried
introduce an annoying buzz -- most likely 60 cycles.

Can anyone recommend a 400 ma wall wart with cleaner output?

Failing that, How about a simple, physically small circuit to clean up
a typical wall wart's noisy output?

Wanted - Cheap - for Drake TR-4C: broken AC-4 or AC-3, or home brewed power supply, or modifiable power supply by other manufacturer, or interesting power transformer.
--------
I want to power up a Drake TR-4C I picked up. It did not have a power supply. The price an AC-4 power supply brings today is more that the transceiver is worth. Are there more radios out there than power supplies? (Kind of like there are more horses asses than horses). Are the high AC-4 prices a function of scarcity or what?

I've looked at the schematic of the AC-4 and decided that it's not rocket science. I'm not putting together an "original" collection of Drake equipment and I don't need the power supply to fit within a MS-4 speaker (which I don't have and don't need). So - I think I have some economically appealing options.

- I could repair a broken AC-4, AC-3 as long as the transformer is OK.

- Home brew power supplies do not scare me.

- It's possible power supplies for other rigs could be adapted to work with Drake gear.

- I could build my own homebrew power supply. The critical component would be the power transformer / transformers. (There are many power supply designs that would work).

Here is what the power supply needs to do:

Input: 117 vac
Outputs: (12.6 vac @ 5.5A), (650 vdc @ 300mA average - 500 mA peak), (250 vdc @ 175 mA), (-45 to -65 vdc for bias)

If any of you have something to sell me that will get me there, please let me know (with details).

Thanks Jeff - KA9S

The trouble with the 98% of USA citizens who are not aware of the existence of the rest of the world, or the damage caused by world-wide indiscriminate use of their weapons of mass destruction, is that they are far too childishly patriotic. They natuarally believe their own distorted, hopelessly biased propaganda, fundamentally generated by their international oil and energy, atmospheric-polluting companies.

Iraq, Palestine and other middle-eastern and central Asian countries are heading, slow-motion, towards another Vietnam, Cambodia and other places left poisoned and in ruins. Your boys in the armed services will return home, not necessarily all in black bags, but in the form of many thousands of unemployed hillibillies, drug addicts, detested outcasts of society.

But it need not end in that way. You are all-powerful and rich. Just find some teachers and educate yourselves before it's too late. For everybody's sake on this small overepopulated, underfed Earth.

You could probably use a Heathkit HP-23 or one of the A/B/C
varients. The Heath's voltages are higher than what you spec.

HP-23's are about $50. There's almost always one or two on eBay.
I saw one go for $30 at a hamfest this spring.

An 'all in one' transformer might be difficult to find ; however since it is
assumed the unit is in a separate enclosure ,you can implement the power
supply unit with up to 4 separate transformers which no doubt can be found
at various ham fleamarkets .
The biasvoltage can probably be obtained through a separate diode and zener
voltage
circuit ,using the transformer supplying 250V @175 mA ,which would enable
you to implement with a maximum of 3 transformers.
Good luck with your quest.

Hello NG,

Im looking for a manual of the famous rx EK085 from R&S.
On the web I found only a brief description of the main
functions and some functional block diagrams.

Is someone able to provide my a electronic documentation
especially about the remote programming via rs232.

Many thanks in advance.

Markus

In addition to the voltage being MUCH higher than the Drake likes, the Heathkit HP23-series supplies couldn't begin to provide enough plate current for a TR-4C! Peak current consumption of, say, an HW-101 or SB-102 is 250 mA. The Drake draws twice that!

Ken,

How about just wiring up a plug to your present13.8 Volt
DC power supply, assuming you have one. Alternatively, you could fix
the wall wart, which may be one that puts out AC. If so, you could
rectify it with some diodes, filter it with about a 1000 microfarad at
16 volt electrolytic capacitor, and use a LM7812 3 pin regulator, which
would hold the output voltage to 12VDC. A LM7812 in a TO-220 case is
good for over 1 amp current draw, and so would be fine for your Icom.

This has the benefit of being cheap, easy, and being a learning
experience. Give me a shout if you need a schematic or a physical
diagram of what I am talking about. The whole thing would take 15
minutes and maybe five bucks for parts, tax included.

OOPS...didnt see the part about it needing to be a 6 volt adapter. In that case you change from a LM7812 chip to an LM317, which is a variable regulator. Might add 1 buck to the cost, cuz you need a potentiometer to set the output voltage from the LM317.

You can run a 2 conductor wire off a 13.8 v. power supply and use the '317 to lower the output to 6 volts on a line just to your Icom.

This aint rocket science, easier to do than changing a tire, and way more interesting.

Thanks for your response.

I have plenty of big, smooth power supplies in my shack. I want to
use a wall wart for travel.

The wall warts are putting out the right DC voltage, but they are
noisy. Are there some simple, small components that will filter out
the 60-cycle buzz of the transformer warts ot the staticky hash of the
switcher warts? Ferrite toroids seem to have no effect.

I don't mind soldering something up.

Ken

I would really have to question that a Power Supply for your Drake could be made cheaper than buying one unless you find enough fools to give you all the parts and they pay the postage to ship them to you. You should be able to find a good used AC4 or $75 and an AC3 for even less. A Heathkit should work with minimum modification put they seem to go for about the same amount. Try a Swan or a Galaxy but I expect they will be just a little cheaper but not much. I believe the rule is about a $1 a pound. Just don't look at the Collins stuff.

I might be able to find you a Transformer but it will cost you $25 plus $15 for postage.

They'll never get it. It's too simple.

I use these head lamps to get at the dark spots behind the equipment table.
They work great when trying to plug into the speaker jack and not the key
jack. Just leave this link where the XYL can see it.

http://www.lighttorch.com/index.html

Happy Holidays!

Ken,
Since you need it for travel, I would suggest build the assembly in a small box that goes inline between the wart and the radio. Just interrupt the cable and extend it a bit. You could build the whole thing in a box the size of PEZ dispenser and have room left over.

An additional idea...If you measure DC coming out of the wallwart instead of AC, it likely just needs filtering. Skip the rectifier and go with just the capacitor and the regulator. Maybe you could start with a higher voltage wall wart, too. The 317 regulator can handle up to 37 volts input. If you do that the variable voltage property of the LM317 chip would be great to use for other items requiring a wall wart, but one of different voltage. Maybe a 14 volt or 15 volt wart would be a start. If it puts out AC, include the rectifier diodes. If not, skip 'em.

G'day Art, don't worry about BOG (as he is also known), he has a bee in his
bonnet about the "proper" use (i.e. traditional English) of the English
language - he is always trying to get people to use "metre" rather than
"meter" when referencing frequencies or lengths. He really is a tool, but
most people just ignore him.

Just ordered a new Icom PROIII, need to sell the following.

I will be offering my Kenwood TS870, PS-52, and SP-31 Speaker, MC-90 Microphone as a package deal.

Have no idea what it is worth yet, but this radio is a "Cream Puff". Not a scratch on it, and covered with a towel when not in use.

There are some pictures of the radio on my Website.
Anyone interested, please drop me an email, address is on QRZ.com as well as URL.

Very good. An equipment listing on the antenna and digital sites and then
he tells us to take a look at QRZ without giving a callsign.

This guy must be from 11 meters.

John,

I mostly agree with you, but I have seen a lot worse in these groups,
and you have to give the guy credit for being truthful with his identity.

And just to keep it somewhat on-topic (I can't imagine how to do so with
this many groups), I've used a similar product that I got at Home Depot
(cheaper there), and I was AMAZED at how well it works, exactly the way
that RBR mentioned. When I'm digging around behind my computer, or
amplifier, or my HF rig, looking for the right jack, etc., it it 100x
better than using a lamp or handheld flashlight. I'm farsighted and
have to use glasses for anything closer than 3 feet, and bright light
really helps. Aha! My post is relevent! At least, to other old guys
like me.

Disclaimer: I don't know W7RBR nor anything about his business.

73,
Dave

Try FRY'S ELECTRONICS.

They're just a few minutes south of the strip, on the west side of Las Vegas Blvd, about 3 or 4 minuted south of the "Welcome to Las Vegas" sign. You can spend a few hours in there. Nice computer dept. Nice component dept. Nice gadget dept. And all the consumer electronics you could spend money on. I don't think they have any ham radios, but GPS, FRS, and plethora of other techno goodies are there for the fondling!

Their URL is: www.frys.com

but it's no reflection at all on their retail setup, you have to go there. I was in Vegas for a week and went 3x, just kept buying up goodies.

As for AES in Las Vegas, sure they might have everything, but most of it is not in sight, it's *almost* all behind the counter and in boxes. There is a limited selection of toys to be seen on display, and even fewer toys you can put your hands on. I was there a couple of times, but it's not a place to spend much time browsing. You pretty much have to know what yo want to ask for before you get there.

Have fun in the land of broken dreams!

RF Concepts RFC 2-417 2-meter linear amp. Input
power just right for a Yaesu FT-847 and most mobile
radios:
- 45 watts in, 170 watts out on 144-148 MHz.
- Works for AM/FM/SSB/CW.
- Switchable GaAs FET preamp.
- Has RF sensing keying.
- Switch for SSB vs. FM RF sensing keying.
- Has connector for external PTT connection.
External PTT jumper selectable "+" keying or "ground" keying.
- 5-pin DIN connector for remote control.
- Automatic thermal shutoff.
- Automatic shutoff when SWR > 3:1.
- Indicator LEDs for power, TX and protective shutoff.
- Includes "Jones" connector for power.

Thank you very much for your tip! :)

I saw their on-line retail chain (outpost.com) and I'll try to get some idea about products and prices there.

Hi Jeff,
Wow, what a mess of replies you got, but nobody offering to sell you
one.
I have 2 possibilities:
1 - what appears to be a hombrew "repackage" of an AC-3 on a small
chassis. It looks like the components are from an AC-3. I powered it up
some time ago to ck voltages, seemed OK, but I didn't put it to any rig.
It needs am AC cord, and has a female jack for outputs.
2 - a stout HB supply in a covered chassis like they used to put audio
amps in. I used this for a while with a T-4X. It has a terminal strip on
the back, and a cable with the proper Drake plug.
I can take digipix of both.
$25 for #1
$50 for #2
plus postage

73,
Al, W8UT
New Bern, NC

I'll make you a better deal than that. Send me $175.00 to be donated to the
ARRL Frequency Protection Fund (you could take a tax deduction) and I might not
tell Riley you're trying to sell a non-certificated CB set.

Good luck on this on now

pardon my asking, but isn't this radio just a tad "extra legal"?
also, it seems that your choice of groups would have been better served with
rec.radio.swap and alt.forsale.

K-40 Processor microphone Brand new in box $25

Turner RK70J mobile power mic NOS Brand new in box $25

Yaesu YS2000 2000w PEP-reading power/swr meter; matches FT101/901 series. Mint cond. $200

MFJ 2 pos ant sw like new $20 (have 2)

Diawa CS-201 2 pos ant sw brand new in package $35 (have 3)

Diawa CS-201 2 pos ant sw used good cond. $25 ea (have 3)

Diawa CS401 4 pos. coax switch excellent cond $75

Alpha-Delta 4 pos. coax sw. in excellent cond $60

MOBILE HF Radios

Yaesu FT-757GX - case and front a little rough from use on boat and in mobile,

but 100% operational with mic and cord $200

Kenwood TS-450S (NO A/T) mobile - in good condition, minor scratches on front panel

with mic and cord $400

Icom IC-735 HF mobile radio - in excellent condition with cord and mic $400

BASE HF Radios

Yaesu FT1000MP - in new condition, box, manual, etc $1,400

Kenwood TS870S w/ TCXO option - like new, box, manual, mic $1,600

Kenwood TS-950SD, normal SD options, optional 1.8K SSB filter, voice synthesizer

SP-950 speaker

SM-230 station scope/analyzer

IF-232 serial port interface

All in like-new condition

Original, non-smoking owner, all orig boxes and paperwork

$3200 for complete station

Icom IC-765 HF transceiver - could pass for new. One of the last made SN 42xx

Optional UT36 voice synthesizer, UT102 AM filter, MB19 rack handles, PBT mod.

True collector quality. Original owner, no-smoker, all boxes, manuals,etc as new

$1400

VHF/UHF Radios

Icom IC-970A 144/430 base radio - could pass for new.

Optional UX-R96 wide rx module (50-950MHz), UT34 tone sq x2 (main/sub), UT36 voice synth,

MB-19 rack handles, built in PS 25w output.

True collector quality. Original owner, no-smoker, all boxes, manuals,etc as new

$2000

Kenwood TM-742A tribander with 144/220/440 band units, TSU-7 CTCSS

Could pass for new, never mobile, no scratches, non smoker. All orig boxes, accys

$750

HANDHELD Radios

Kenwood TH-79A 144/440 dual band handheld - NOS Brand new in box $250

Icom IC-W2A 2m/440 dual band HT - NOS Brand new in box $300

Icom IC-3SAT 220MHz HT - new in box $250

Icom BC-72 charger - new in box $75

Tons of batteries and accessories (spkr mic, dc adapter, etc) for this series radios

(used) $100

AMPLIFIERS

Henry 3K Premier console amplifier

3CX1200A7 tube, 4500v HD PS, vacuum relay QSK

Unit has casters for easy movement

100w in yields 2000w out clean and effortlessly

Only 5 hours filament time, less than one hour key-time on tube

Amplifier is in as-new condition

$3000

MICS

Yaesu MD100 desk mic - brand new $125

Kenwood MC-60 mic - brand new $125

Kenwood MC-80 - brand new $100

Icom SM-8 desk mic - brand new $100

BRAND NEW IN BOX POWER SUPPLIES

Astron VS-35M (1) $175

Astron VS-50M (2) $250

Astron RS-12A (1) $70

SCANNERS

PRO-2006 base scanner unblocked NOS Brand new $250

PRO-2004 base scanner unblocked NOS Brand new $200

PRO-43 handheld scanner unblocked NOS Brand new $200

PRO-51 handheld scanner like new in box $100

TNCs

Kantronics KPC-3 - as new in box $100

AEA PK-232MBX - as new in box $200

AEA DSP-2232 - as new in box $500

COMMERCIAL RADIOS

(2) Motorola GP-300 UHF 403-470 16ch DTMF in new condition, new rapid charger

$500 for the pair

(1) Motorola GP-300 UHF 403-470 16ch in good condition

$200

(1) Motorola JT-1000 UHF 403-470 brand new in box w/ optional prog key, rapid charger.

A true collectors item. Highly sought after, only FCC-accepted keyboard-prog commercial radio.

$750

(1) Motorola HT-1250 UHF 403-470 brand new in box. Includes rapid charger, ribless prog cable, disc, service manual

$700

HYPE ALERT! HYPE ALERT! HYPE ALERT!

Reg Edwards wrote:
> The trouble with the 98% of USA citizens who are not aware of the existence
> of the rest of the world,

Actually, we are all too aware. Even today, the foundation of our country is based on immigration. Point to any one schoolchild ignorant in geography and histor, and he or she will point to a grandparent from the old country.

or the damage caused by world-wide indiscriminate
> use of their weapons of mass destruction,

We've only deployed two weapons of mass destruction in anger: at Hiroshima and Nagasaki. True, we've made quite a few atmospheric and underground tests since then, but *none* of them have actually been used against a target. And as far as I know, even though the US stockpiles chemical weapons we never even considered germ warfare.

Or are you speaking merely of the damage caused by deterrence? All that managed to accomplish was the quiet collapse of the Warsaw Pact.

is that they are far too
> childishly patriotic.

True, we teach patriotism to children, and hopefully this childish patriotism becomes an adult version based on government by consent of the governed. The true test of this is our continued willingness to pay taxes.

They natuarally believe their own distorted,
> hopelessly biased propaganda, fundamentally generated by their international
> oil and energy, atmospheric-polluting companies.

Sorry now. The last propaganda I have ever heard of has been generated by speechwriters in the Republican, Democratic, Libertarian, and Green parties. I don't notice the speechwriters being in the pay of multinats.
>
> Iraq, Palestine and other middle-eastern and central Asian countries are
> heading, slow-motion, towards another Vietnam, Cambodia and other places
> left poisoned and in ruins.

Not our fault. There was conflict and chaos enough caused by regional despots, absolute monarchs, and fanatics willing to see the human race extinct rather than see even a single person free of the yoke of thier

own religious totalitarianism. Our involvement is slowing this
downhill slide, not exacerbating it.

Your boys in the armed services will return
> home, not necessarily all in black bags, but in the form of many thousands
>

of unemployed hillibillies
Hey, those hillbillies were unemployed before they joined the army to
give themselves college educations and their families a better shot at
the middle class.

, drug addicts,
Soldiers now get therapy as part of their health package. Battle
fatigue is now a recognized illness that even the most gung-ho general
would fail to confuse for cowardice. Further, the Vietnam era US army
had just as huge a drug problem as the rest of society. In modern
times drug addiction rates by veterans are less than our population as a
whole.

detested outcasts of society.
Only because we treated them that way when they came home.

>
> But it need not end in that way. You are all-powerful and rich. Just find
> some teachers and educate yourselves before it's too late.

For everybody's
> sake on this small overepopulated,

A canard. The Western democracies are actually experiencing a
population decline. China and India are presently undergoing
industrial revolutions that are helping greatly to stabilize the
rate of population increase. Africa and South America are still
big problems, caused by persistent poverty, tyrranical governments,
and tribalism in lieu of the rule of law.

underfed Earth.

Another canard. The hunger problem is not caused a lack of production
capacity, but from the inability of much of the people to find work to
earn money to buy the food produced by their neighbors.

Capitalism itself causes
uneven distribution of resources, but as the world has seen, any other
system acheives worse results. Dorothy Day said it best that to tie
worth of a person to usefulness was to sin against the inherent dignity
of that person.

If we had a worldwide welfare state, our world could support a hundred
times its present population.

This is the one instance where the Roman Catholic Church actually has it
right.

Hi.

I'm trying to get my ITT-Mackay 3020A, a.k.a. DEBEG 7200, ITT-Mackay EB-3026, and ITT-Mackay EB-302, back on the air. I need a VHF reference card for the synthesizer: when I got it, it had 2 HF reference cards and no VHF reference card, and I'd really prefer not to etch the card myself and make it out of whole cloth.

To see the receiver, have a look at http://mikea.ath.cx/3020/

Anyone got any ideas?

Wonder if there are any other Hams that have managed to take their rigs on a Boy Scout campout and got the Scouts interested in Ham Radio, or even Morse Code ? We have two Hams in our Troop, and we have thought about doing the JOTA in October, along with dragging a rig to our indoor/cabin camping weekends, and something during good weather. Also, what would be a good rig to drag out to these camping events....

You're kidding, right?

Unless I'm mistaken, there's a number of other radios, unless they're
not keypad programmable - Kenwood TK-250 / 350, Vertex VX-10, Icom
U/H-16, There's a few other Vertex's too. Plus the Bendix King LPU
series...

Phil:

Cabin camping during the winter months is a great time bring along the rig. Started with an FT-990AC and then traded for an FT-100D with a switching power supply. That fit under the car seats easily. Bringing a Kenwood TS-480SAT this weekend with an MFJ long wire tuner and switching supply. Antenna is about 30-40 ft of wire thrown over a tree branch. Many of the boys really enjoy the radio time.

73,
Woody AK2F

A decade or two ago Hams from Western KY took their rigs to Council
campouts on a regular basis. I have no records of how many actually
got their license.

Some years ago Scouts troops in the vicinity were invited to view and
participate in the Annual ARRL Field Day.

I never saw the outing tutn out to be a flop. But it might help to
have a demonstraton or two to peak their interest.

Works a lot better if you pre-arrange to have someone at the other end
to talk with.

Maybe you could set up with another troop doing the same thing, kind
of a mini JOTA.

Happy trails,

I've done morse across the lake at our council camp, with those little
super-bright LED keychains. The first-year Scouts were truly impressed.
Actually, I had one group on each end of the lake, and *they* did the code.
:-)

Oddly, I have both HF and 2m rigs, but no license. I have to drag a ham
along to our next cabin outing to help me run an antenna, tune it up, and
start yakking.

I made one mistake (for purposes of this particular thread) when I was
a Scout - I learned semaphore. My friend and I could have passed the
Navy Signalman CPO test for speed when we were 15 years old. We were
not allowed to enter signalling contests at camporees our last 2 years
in BSA - in fact we weren't allowed to be a team for any event those 2
years.

Teach kids Morse if they learn anything. It took my son and I 1 week
(every night) to learn the code well enough to pass the Novice test 28
years ago. But make it interesting or you will lose them - and only
practice for a very short time.

Hugh

I'd write or call Ameritron/MFJ and ask 'em directly. I have an '811H and
I'd be interested in knowing as well!

Correction - I know the above are keypad programmable. That should be
"Unless they're not FCC approved". And I know the vx-10 is fcc
approved AND keypad programmable along with the Bendix King. I'm not
certain that the U/H-16 is FCC approved, but is keypad programmable.

hi

I have one of these weather stations
the outdoor sensor is about 12 feet away from receiver
and the receiver is about 6 feet from a hf / 2m and 70cms
radio installation and all is fine , no problems .
however if I put the receiver within 2-3 feet from the radios
I can sometimes pick up the sound of the sensor in my
speaker system , and I have been told that it is also transmitted
on my outgoing audio , must be some sort of mic lead pickup
not too sure , but in general its quite expectable .

hope the info helps.

(ps) mine was from aldi the £9.99p one last year deal.

# 6346. FT817 front vs. rear connector

Newsgroup: rec.radio.amateur.equipment
Date: 2004-12-16 09:57:32 UTC
From: David Snyder Hale <david@isi.mtwilson.edu.REMOVE>
Message-ID: <cprm6c$om6$1@agate.berkeley.edu>
Source record: 18059

I have the FT-817ND and I read various places that using the front BNC connector draws less current than using the rear SO-239 connector. This raises two important questions that don't seem to be answered elsewhere:

1. why is this?

and even more importantly,

2. is there any penalty for using the front connector instead of the rear (or vice-versa)?

I am looking for the following Cushman Plugins:

302 - Deviation Meter
306E - 400-520 MHz Prescaler
314 - High Sens Broadband Mixer
315C - 40-90 MHz Prescaler

Manuals for the above plugins are not essential, but highly desired.

I am also interested in purchasing a manual for the 317 AM/FM/SSB
monitor plugin.

Thanks,
Mike Harmon, WB0LDJ

Hi,

Just a suggestion in case you've not yet tried it. I've seen many of these types of items on E-Bay. Look under "Service Monitors". May have to remove the S - from Monitors to make it singular.A worse case scenario, you may be able to buy another unit with those or some of those plug-ins. They're not too high in price if memory serves me correct.

DM

Too bad you aren't a bit closer to central Michigan. (Midland)
I just took down an 8' *solid* aluminum dish with polar mount. It
does have a few small dents, but I've been using it on both C and Ku
bands just fine.

I took it down as I'm going to an 11' mesh which weighs less than half
as much.

If no one picks it up (free) it's going to get cut up and hauled to
the recyclers.

I read that an antenna relay has to be energized to use the rear
connector, but that only draws a few ma so not really a problem.
I use the rear connector most of the time. I feel it's more
rugged than the BNC on the front.

To some extent. I have taught Morse to Sea Scouts within the last five
or so years. But back up to 1957 when I was 15. I had been a ham in
Wisconsin for almost two years at the time and I was engaged to teach
Morse Code (and a few other scouting subjects) at the local scout
camp. I was also allowed to bring my ham stuff to the camp which I set
up in my Morse training area. It was an all CW station because that
was all I could afford back then...A Viking Adventurer and a
Hammarlund HQ-100 (my dad bought the receiver for me). If fact the
scout summer job was taken with the objective of earning enough money
to buy a phone rig kit which I did. I bought and built a Globe Scout
680, my first phone rig. I must have exposed a few scouts to ham
radio, and while I didn't get any immediate response, by the time I
was in college some of those scouts were of high school age and became
interested in ham radio. Some of them remembered me and there were a
couple of them to whom I gave Novice exams once I turned 21 as was the
practice at the time. I had the cost of the transmitter figured out to
a gnats eyelash. My salary for the camp session (my first job) plus
the trade in value of the Viking Adventurer was just enough to buy the
transmitter kit...about $90.00.

In addition to my previous posting re my camp staff job teaching Morse code, I would be remiss in this context if I did mention that the Boy Scouts were directly responsible for my becoming a ham in the first place. (And by extension my profession since I spent 35 years in the field of radio-derived intelligence.)

By 1955 when I was 13, I had already learned the Morse Code somewhat since that was a requirement in those days for a First Class rank badge (you could optionally also use semiphore). I had not used it very much though in the two years since I got my badge. I was at Scout camp as a senior camper (e.g. I stayed at camps for five weeks, not with my own unit except for the one week they were there.) That year in August, our town had the last polio epidemic before the various vaccines were available. Over 30 children in our town contracted the disease and one of my junior high school friends was a fatality. Since we at camp had no exposure to the disease, it was thought best to extend the camp a couple of weeks (school opening was delayed) and keep us at the camp. An older acquaintance of mine who I knew from Junior High School had just gotten his Novice license was also there. Since we were told not of over exert ourselves e.g. no swimming, hiking, my friend asked me to help him with his Morse as he was trying to get to the General Class level. So he refreshed my memory of the code to the point that I could send and receive pretty close to the

five wpm. By the time school resumed in October, I knew code pretty well, got the ARRL liscense manual and made acquaintance with my shop teacher who I knew from his license plate was a ham. That teacher coached me on the remaining requirements for a Novice ticket and set up a station in his drafting classroom with some of his spare equipment. He also coached me for the General test because in those days an eighth grader did not have any algebra background to get through the formulas on the General test.
The older scout (by two years) later became my best friend and mentor through the next three years until he went away to West Point. He not only got me into radio, but I did most of the extra curricular activities he did in school.

At 10 MHz, the power rating for RG-58 (Polyethylene Dielectric) is 730w and
for RG-8 it is 3700w). For foam dielectric, use something like 50% of the
above. Note that RG-8x is rated at 1000w at this frequency.

Cross-posted to: rec.scouting.usa,rec.radio.amateur.equipment

In our troop several years ago, some ASMs took a Council Wilderness First Aid class, where a guest speaker talked about Ham Radio as an emergency communication tool (i.e. emergency preparedness). Since here in New Mexico we do a lot of Wilderness camping, but nearly the whole state can access a statewide repeater network, it made sense to get some licenses in the troop and a couple of ASMs did so. The utility of the Ham radios (2-m handy-talkies) expanded into safe-calls home (via telephone auto-patches), automobile convoy communication, ETA announcements for scout pickups after campouts, keeping track of fishing parties and day hike groups on campouts, etc. Ham radios (especially via repeaters) have substantially longer range than the Family-service radios. (It was kind of cool to keep in touch with our Philmont crew this summer and pass along trek status and stories to parents.) Consequently, today about a dozen of our leaders and several of their spouses have licenses and radios. A number of the Scouts themselves have picked up on this to where several of them have licenses, too, and more are pursuing one. We are now encouraging this (since about a year ago) with a special patch awarded to Ham licensees designating them as Troop Radio Operators. Their Ham Radios are the one piece of electronic gear that we allow the scouts to bring on campouts. Some of the boys are even now building their own antennas to enhance their radio's performance.

I believe the degree of our troop's involvement in Ham Radio is somewhat unique in our Council, at least. But I believe it is a real success story. Ham Radio and Scouting are a natural blend...

That's the reason. A relay stays engaged whenever you are using the
rear connector (menu #7). My unit measures like this:

At 13.60 VDC, volume off, receiver fully squelched, the unit draws:

Rear antenna: 0.374 amps
Front antenna: 0.350 amps

Difference is 0.024 x 13.6 = 0.326 watts

That's 300 mW, which is significant if you are using a small battery........

Incidentally, turn off the backlight for the display (menu #10) and save
another 0.030 amps.

Body handling: HTML body converted to readable text

Also I understand that coax power handling capabilities should be de-rated
as the SWR goes up.
Any one have a formula for this ?

Download program COAXRATE from website below in a few seconds and run immediately. Easy to use.

It calculates, amongst other useful things, power loss and temperature rise in solid polyethylene coaxial cable, versus dimensions, RF power input, SWR etc., under various physical conditions. It is at least as accurate as manufacturers' own rating data. It takes into account ambient temperature which almost invariably is ignored.

Cable power rating depends on whether it is used at midnight in mid-winter in N.Alaska, or at noon, in mid-summer, in New Mexico. Data in ARRL handbooks is fairly useless.

Program COAXRATE.

# 6380. FS Yaesu VX-5R HT plus Lots of accessories

Newsgroup: rec.radio.amateur.equipment
Date: 2004-12-18 23:14:11 UTC
From: Charlie Hugg <hug-a-bug1@cox.net>
Message-ID: <1R2xd.1082$Jb7.636@okepread01>
Source record: 18082

I have for sale a like new Yaesu VX-5R triple band HT plus lots of
accessories including:

ADMS-1E Windows Programming System including disk and all cables and
instructions in original box, never used.
CSC-73 Soft Case
E-DC-5B DC Adapter with Noise Filter for mobile operation
MH-34 Speaker Mic
MFJ Headset/Mic for the VX5R
There is $140 worth of accessories included.

This equipment is all like new. It was used only a few times. The original
battery accepts a full charge.
I have the original box for the HT and manual, etc.
Price is $225 shipped in lower 48

# 6381. FS Seperation Kit for the Icom IC-207H

From: Reg Edwards <g4fgq.regp@ZZZbtinternet.com>
Message-ID: <cq39gp$qdn$1@hercules.btinternet.com>
Source record: 18087

Manufacturers' and handbook recommended maximum power ratings for coax, for amateurs, are based on the MELTING (FAILURE) POINT temperature of polyethylene. Nobody in their right minds would ever run common-or-garden RG-58, for example, at such a high power input. Not even at the North Pole.

Within seconds, just to grasp the cable in the palm of the hand, would cause blistering of the skin.

In any case, the power dissipated in the cable would not be tolerated by amateurs because of the loss in signal strength.

Also, running the cable at such a high temperature severely reduces the life of the PVC outer jacket. It soon becomes brittle and cracks. With time it fails before the coaxial polyethylene insulant.

Of course, the high advertised power ratings are advantageous to technically ignorant USA cable sales departments and salesmen. It just looks good in the sales literature.

Rest assured, NASA never uses RG-58 at one kilowatt, not even with an SWR of 1-to-1. Their missions last longer than 10 minutes. ;o)

I have the Kenwood TS-440S and Icom IC-735 and like them both. I
bought the Icom first and, probably for that reason, like it a little
better. I had a Yaesu before them and liked it, too. I have a small 10
meter rig and a converted CB 10 meter rig I take to Alabama some
times. I have a Yaesu 2 meter and an Icom handheld 2 meter.

I used the Icom at home and the Kenwood in the car.when I had a
passenger car vice an SUV.

Hugh

# 6391. Trouble with Ameritron AL-811H Oscillating!

Newsgroup: rec.radio.amateur.equipment
Date: 2004-12-19 16:46:07 UTC
From: gibberdill <gibberdill@bak.rr.com>
Message-ID: <jfixd.18116$nP1.11504@twister.socal.rr.com>
Source record: 18093

My new AL-811H oscillates on the highest 3 band switch positions--20, 15 and 10 meters. This is without exciter drive. Plate current goes from zilch to 300 mA and grid meter goes NEGATIVE. This is a grounded grid design with four 811 tubes in parallel. Power output as read on my tuner also shows RF is being generated (what frequency, I can only guess). This problem seems to be new after switching the primary to the 240 V configuration, which incidentally boosted the plate from 1600 to 1800 V--perhaps too much for the 811 tubes?

I contacted Ameritron and hope to hear from them this week. Has anyone had the same thing happen?

I just got my TH-F6A a couple of weeks ago, but haven't really used it yet. A few days ago, I tried to test the TH-F6A's receiver by using one of my Midland GXT 400 GMRS/FRS radios (supposedly puts out 4 Watts maximum). I set the GXT 400's power output to low (3 settings are available -- High, Medium, and Low). I then tuned the TH-F6A's A-band receiver to the frequency corresponding to GMRS channel 1 and transmitted a couple of times with the TH-F6A about a foot or so away from the GMRS radio.

Well, just a few hours ago I learned about how receivers can be desensitized by nearby (I hate it when I find out about things like that after the fact). So now, I'm worried that I have just ruined my brand new rig.

I'm wondering how the desensitization process occurs -- does maximum damage occur during the first few hits, or is it a more gradual process?

## 6400. FS Yeasu ft840 with extras

If you fried the front end, it happened immediately. Do you know in fact that
it's damaged? Unless the radios were EXTREMELY close (inches apart), there
shouldn't be a problem.

Agree. Desensitization is not the same thing as damaging the front end, which is your immediate concern. Desensitization is strictly a temporary problem that goes away when the offending transmitter goes off the air. I have a packet rig in my garage, operating in the 2-meter band. If I am listening to an FM broadcast radio, I will hear my FM station go silent whenever the packet radio transmits. The FM radio is not harmed in any way.

The amount of desensitization is variable, as you might expect, depending on the power of the transmitter and the coupling between the antennas.

Receiver desense is the response of the receiver under certain strong-signal interference conditions, and is a performance issue, not a permanent hardware failure condition. Suggest you Google "receiver desensitization" to get a better idea of the process.

Desense basically is an off channel frequency signal which overloads your front end, thereby making an "on channel" signal undetectable or not received well. While that won't ruin your radio, this will -> an extremely strong signal on frequency or close - could possibly blow out the RF amplifier transistor or protect diode(s) in the front end of the receiver. You'll know if it happens. Your receiver won't be working so hot in any manner.

I do NOT mean to start a war here. I used to put a D-104 on every base rig I owned. Never had anything like the 746 PRO before with all the mic settings and contours. Looking for an all around desk mic that can give great DX punch and if I want to chew with the hi-fi boys I could set the rig for that too. I think this pretty much rules out my old fav D-104's!!

I am looking for a desk mic..not boom mic or any kind of high faluting vacuum tube "studio" mic. I'm a ham..not a DJ...

The massive croos-posting would suggest this is a lame'ish troll.

# 6409. HELP: 2 Meter Repearter intermod from 2 Pager transmitters near repeater site

Newsgroup: rec.radio.amateur.equipment
Date: 2004-12-21 01:48:54 UTC
From: Photoman <photoman28@hotmail.com>
Message-ID: <w_ednSN81oluHVrcRVn-hg@adelphia.com>
Source record: 18011

We have 146.04/.64 repeater on a nearby mountain top. It worked great for years with a range of 100 miles or more. Since the phone company and a pager company installed their high power transmitters near the site of the repeater (within 100 yards) the repeater is virtually useless. After much head scratching I believe that the difference in frequency of the pager transmitter of 600 khz is the problem but have no idea how to solve the problem without going to an odd split. The repeater coordinator for this area of Virginia won't even consider that as an option.

The equipment that we are using is excellent. The transmitter and receiver on the repeater are both Motorola Micor and were modified with to the repeater frequencies by FCC 1st class licensed hams using Motorola parts. This is not an equipment problem. We are running a set of Wacom cavities which were bought new and are correctly tuned and the antenna is a Phelps-Dodge Stationmaster. When the intermod occurs it is dependant on BOTH pagers transmitting at the same time. If only one pager is transmitting there is no problem. This may at first sound unusual but the pagers are in the 150 mhz band and they are exactly 600 kc apart. These transmitter are both 250 watts or more output.

My theory is that the 600 kc (difference of the 2 pagers) is mixing with the output of the repeater 146.64 and producing the 146.04 signal, the repeater input frequency. We are using sub-audible tone for repeater access and as soon as a station working the repeater drops carrier the repeater drops. The intermod cannot hold up the machine once the tone is removed. This may be happening in the antenna or hardline connectors prior to the cavities. Every test I have run, and there have been many, supports this conclusion.

We are not the only 2 meter repeater that has fallen victim of this problem and in every case we have found two pager transmitters situated 600 kc apart near the repeater. Most of the other machines have been taken off the air, others just put up with it. No one has been able to solve the problem and many technicians have studied it.

Moving the repeater far enough away is not an option since the peak of the mountain is so small. Also we are using an existing tower which we would not have access to at other locations. The searches I have done on Google has turned up the stock answer of helical resonators which would apply to 2 meter radios but not repeaters. If you are familiar with the Micor equipment you know that the receiver has excellent helical resonators built in.

Tonight I have considered the possibility of splitting the receiver and the transmitter of the repeater and linking the rx signal by a 220 mhz link. I am hoping that by reducing the level of the 146.64 signal by 50-60 db would

alleviate the problem. Maybe not, but I'm out of ideas. This split would be only about 100 yards but could that be sufficient to relieve the problem?

Have any of you ever had this problem and solved it? Any input (pun intended) on this matter would be appreciated.

Selling out, single lot price for everything.

11ea. Systems Saber VHF 255ch. radios with DES/XL modules, rapid-chrgrs, brand new batts, antenna, etc. (138-150MHz or 146-162MHz)
2ea. KVL, key variable loaders. DES/XL, (1ea. T3011DX and 1ea T3011CX, one battery and used charger. Can upgrade the CX to DX for $40)
2ea. Saber keyloader cable, (one will do expo, and has saber and spectra adapter)
1ea. Syntor keyloader cable
1ea. Secure Encryption external Box keyloader cable.
20ea. MT1000 rapid chargers.
7ea. Keynote pager chargers, 2 NIB.
10ea. EXPO rapid chargers.
3ea. MT1000 leather holsters with D-swivel and belt loop.
5ea. MT1000 plastic holsters, dirty and missing lanyards.
BOX of MT1000 sp/mics, public safety mics and others for parts. Some work, some not.

All but 2 radios look new, loaders look new. MT stuff is average/above avg. condition.
$2800 plus shipping.

Serious inquiries for photos, etc, welcome.

PLEASE don't email asking for the KVL's or other single items.

thanks!

# 6412. 6 Meter amp?

Ken,
See if you can find anything on TE Systems. I did a search and found
reviews on their gear but no website for the company so I'm not sure
of their status. Recall seeing their ads in QST a few times in the
past year or two so they might be around but just not on the web.

You may want to do what I did . I had an older ssb/am rig and that amp a few years back . Sold them both off and went with an Icom 706. That gave me an all mode rig and 100 watts out on 6 meters plus everything else but the 220 band as a stand by rig. I already had a good 2 meter and 432 mhz seperate setup. A new Icom is not that much more than the amp and rig.

# 6415. Re: HELP: 2 Meter Repearter intermod from 2 Pager transmitters near repeater site

Newsgroup: rec.radio.amateur.equipment
Date: 2004-12-21 16:23:27 UTC
From: Gary Schafer <gaschafer@comcast.net>
Message-ID: <lfjgs0tedhqdhcupb0pqmnnv5bgu3jnsms@4ax.com>
Source record: 18017

The inter mod could be originating in your receiver or in one of the paging transmitters. Part of it could even be originating in your own transmitter.
The first thing I would try is a couple of notch cavities in your antenna line tuned to one or both of the paging transmitter frequencies.

First tune both to the same paging transmitter frequency. Then try the other one. Then try one on each paging frequency.

If they make no difference then it is a good bet that the inter mod is originating in some other transmitter. Your repeater signal may be mixing in their transmitter. The only way to cure that is a notch cavity in their antenna line tuned to your transmitter frequency.

A pass cavity or two in your receiver line may help. But you will be able to get much more rejection with a notch than a pass.

If you don't have a notch cavity but do have a pass cavity you can use the pass cavity as a notch by placing a T in the antenna line and connecting only one loop of the pass cavity. That will function as a notch.

It might be helpful to disclose the frequencies of the transmitters
and the IF frequencies in your system.

I have a problem that a new towing company transmitter is 16.9MHz above
my output frequency on 440. Guess what the IF frequency of my remote
base might be. It's so strong that I get intermod with the remote
base antenna disconnected.

# 6417. 7 BANDER SOMMER XP707 FOR SALE !

Newsgroup: rec.radio.amateur.equipment
Date: 2004-12-21 17:18:51 UTC
From: Jos&#65533; Lopes <fartolopes@mail.telepac.pt>
Message-ID: <41c85afe$0$26933$a729d347@news.telepac.pt>
Source record: 18020

I am interested in sailing my hf antenna above mentioned that is in very
good conditions.
Reason: need to renew and create a new set up of antennas.
Antenna: Sommer (DJ2UT Beam)
Model: XP 707
Bands: 10, 12, 15, 17, 20, 30 and 40 meters
Balun: The balun furnished with the Sommer antennas is a low-loss
air core type using RG142 (BU) Teflon cable. The balun will handle 2.9 kW
continuous output at 30 MHz with a loss of only 0.05 dB.
This antenna it still on my tower and working very well.
For price please send one email to:
fartolopes@mail.telepac.pt

The transports costs will be at the resposability of the buyer.
If you are interestes we can sed some actual pictures, and for all the
informations concerning gain and front/back, please go to the oficial site:

http://www.sommerantennas.com/beaminfo.html

That's a sensible idea but it goes against what I want.
Up untill a few months ago I had an FT-857D. Radio
worked great but now it's been replaced by the following
setup:

Yaesu FT-840 ($250) with seperate dipoles for every HF band,
Kenwood TM-271A with a Hustler CG-144 @ 42',
Yaesu FT-690RII with a temp inverted V @ 10',
Yaesu VX-2R for 440 TX & general wide band RX,
Radio Shack Pro-94A for trunking & general scanning.

You see, instead of one radio to do everything but only one
thing at a time, I can do many things all at once. Sure, I've
lost 144/440 SSB but they wern't that important to me.

With that in mind, I'm probably going to put a PAR OA-50
up a 20' pole and maybe get an amp for 6 meters - that should
work FB (I hope).

Ken I was referring to just using the Icom on 6 meters. I have seperate rigs for several bands but decided to replace the 6 meter only rig and amp with the Icom. That gave me 100 watts instead of 150 watts out and also if I want to use the Icom for other bands if one of the other rigs craps out I can. Just because the Icom does everything does not mean that you can not just use it for a single band. Also not that you want to use it for FM but with lots of 6 meter repeaters going tone control I don't think that you can set but one tone at a time on the 690. I don't have one of those but do

have the 440 mhz version I bought many years ago.

A good point but I hate waste. OTOH, it *would* be a lifesaver if one
of the other rigs craps out. I'll have to consider that.

As to FM on the FT-690RII, You're right - the stock tone board is DIP
programmed and you have to remove the stock 10W amp to get at it. That
and the rareness of the OEM tone board makes me think of an aftermarket
board. I think it was Comm. Concepts that made a nice rotary selected
box.

My 6m interest is 75% SSB, 15% cw & 5% FM simplex - that leaves only
5% interest in FM repeaters. Something about waste again - using a repeater
when the band is wide open.....

Thanks for the food for thought.

Ken KG0WX

Ken....should work fine. Mine is up around 30' and does a fine job (on a ridgeline, to boot). As for the amp, if you like homebrewing, there was a decent design in QST some years ago...think the design is on the 6m.com site. I built it, works great.

Cheers;
A

Ugh, I take that back! They" have "improved" that site to the point
where it loads like a pig, and I am left with a gazillion "Loading Applet"
buttons.

These people never heard of KISS.

On the OP's topic, these folks used to have App Notes on the
construction of VHF amplifiers that I had been drooling over
for some time. This web site seems to have changed, too. I
hope the App Notes are still in there - somewhere:

http://www.communication-concepts.com/

These folks, too, have some Great Stuff vis-a-vis designing VHF
amps:

http://www.advancedpower.com/

Then again, maybe Santa will bring you something! HI!HI!

Dosen't this cut the option of FM repeater to 1? I have a 290 (the 2m version) and it only has PL (CTCSS) on/offf. The actual frequency is set by dip switches which require the radio to be disasembled to change.

Yes, but imagine their surprise when you show up on a 2m repeater with a
linked 6m input. When I lived in Philly I used to do that on 10m.
Once had a QSO with one guy in St Louis, one in Maine, one on 440 and me
all on a 440/10m linked repeater, I assume you could do similar with
6m too.

You should keep in mind what you don't use, you loose, the 6m band here
(Israel) is 50000 to 50200 with a 25 watt limit.

# 6430. Re: HELP: 2 Meter Repearter intermod from 2 Pager transmitters near repeater site

Newsgroup: rec.radio.amateur.equipment
Date: 2004-12-22 07:40:50 UTC
From: Mike <km6ab@pacbell.net>
Message-ID: <6y9yd.1721$wZ2.1683@newssvr13.news.prodigy.com>
Source record: 18032

If the problem was generated in your transmitter from mixing with the paging transmitters it will usually only occur when your repeater transmitter is on. It sounds like the interference signal is being generated elsewhere. You should first determine if the problem is in your installation or from the pagers. I would use a spectrum analyzer or service monitor at the receive port of your repeater tuned to your receive frequency to see what it looks like and measure the level. It may look like a comb generator every time the pagers fire up! You can then try another antenna into the analyzer to see if the interference persists or use a directional antenna to see if itï¿½s emanating from the pager site or yours. Since you mention other repeaters in your area are suffering from the same problem I would suspect at least one of the paging transmitters does not have an isolator, which is required at all sites I have ever dealt with. If you can pick up the interfering signal on a separate antenna with test equipment and it points to the paging site, you can demand the pager owners address the problem with isolators or what ever it takes to minimize the interference.

It's been awhile since I put a new freq in my FT 50 and I lost the
owner's manual. How do I enter the freq, and PL into a new memory
channel manually?

Thanks all and happy holiday

Bob/WF3H

You failed to indicated if the interference is
present when your own repeater transmitter is off.
First order of business is to eliminate the
non-offending variables. If the interference
is present with the repeater transmitter off,
then it is possible that high-level mixing
is taking place in the final amp of the paging
transmitter or another RF source in close proximity
to your repeater. If you find this is the case,
it can likely be resolved by installing a ferrite
circulator in the line of the offending transmitter.
This will keep the mixing frequency from traveling
down the feedline and entering the final amp
and mixing with another frequency to produce
the "rogue" frequency that is causing the trouble.

Hope this helps.

Good luck.

And this would required to be done by the FCC, when it was reported to
them. The licensee is REQUIRED to make sure that his Transmitter is
NOT emitting interfering emmissions, and he will certainly fix it as
soon as he is notified of his problem.

Bruce in alaska who used to be an FCC Field Agent.....

That's the problem we have 'round here. The only repeater for miles,
and it's on 147.120 - output. Guess what happens when fellers try
to use 142.520...
As you alluded to -- it only happens when the Rptr Xmitter goes "on".
Then the xmisson on 146.520 will hold it "UP". But, of course the rptr
xmitter will go "ON" for ID purposes -- at a minimum 9.999 minutes
after the last rptr use -- for ID purposes. That, plus the fact that
the "hang time" on the rptr is enough to carry over between the
rapid "OVER's" betwix the fellas on .52, means it's A REAL PITA.

No matter to me, tho'. I've totally forsaken F3 here.

Radio Specialty Model 1179-22-1 Repeater $ 50
Appears to be complete, minus crystals.
I have no way to verify operation.
Has 2 settable PL tones...
Outside of case is scuffed,
but inside is very clean!
NO documentation or info...

Standard C468A LNIB $ 90

Standard C568A 95%+ with extended range mod,
and extra hi gain whip. $175

Icom 02AT with wall wart.
Icom BC-35 plus extra Ice brick battery $ 65

Icom IC-229H 90% $ 85

LinkXcel PS-141B 4 port KVM Switch with 4 cables $ 65
-Like New- This is the PS2/VGA model -No manual-

I also have a lot of C64's 3 good 3-5 fixable or parts.
Including a SX64 portable that is fixable.
Assorted peripherals - drives,printer,parallel/serial ports,
modems, tape drive, graphics pads, joysticks, ect.
A lot of cartridges, and software - games to productivity.
Included are extra books for programming ect.
Plus software to run a BBS from the C64..

I would like to sell it all as one group. Will cost more,
if sold piecemeal....

$100 takes it all on the C64 equipment.

All items will include manuals unless noted.
Shipping is NOT included on any item(s).

Hello all,

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=5739268895

(United Kingdom only)

Just a quick mention about my radio that I have for auction on eBay,
It is by Yaesu, Model FT900/AT

This is in immaculate condition since it has been hardly used
approx 5% use, 95% in storage.

Reason for sale, no time to devote to hobby hence selling up.

Anyone want to know more please drop me a line, I'll be more than happy to
help.

Standard GX-3000 VHF APRS Radios. [with DTMF]
I have a quantity of Commercial Standard GX-3000 VHF Mobile Radios (136-150Mhz) 25-30 Watts O/P These radios will work excellent as an APRS Mobile OR Base Radio Station. Units are much cheaper to use for dedicated APRS use rather than spending Large Dollars for a VHF Amateur XCVR and dedicate it to APRS use. Programmed & Tested Operational on 144.390 Mhz. You will have to make up the Interface Cable. These radios are capable of 64 Channels, Carrier Squelch Only and I can program them for other 2 Meter Frequencies for a charge. Please ask should you have any questions.
Cost: $45 USD plus shipping

> this with VX-7?

Hello Jim,
look here: http://home.comcast.net/~sllewd/vx7rmain.htm and
go to the section PC CABLE. It is neccessary to reduce the
diameter of the VX 1 2 5 R cable. Otherweise it could not
contact correctly in the hole of the vx7r contact.
Maybe it would be also possible to make an adapter and
use the CT-91 cable from YAESU.

<< Does anyone know what the 8 pin octal tube just in front of the rectifier is? >>

Just a guess, its been too long since I had one. Please forgive me if my memory turns out to be faulty!

Could it be a voltage regulator tube? An 0D3/VR-150 or 0C3/VR-105 for example? It would have an orange, pink or blue glow inside when working, depending on voltage.

I seem to recall that the Ranger used such a VR tube to stabilize the voltage to the VFO, which would help prevent chirps. It might easily have been located in the power supply section. If it doesn't use the octal version, it certainly uses the miniature version like the 0A2 .

Isn't the final a 6146, and the modulators a pair of 6L6s? Those may be the only other octal tubes.

The owner's and construction manuals as well as the schematic are
available here http://bama.sbc.edu/e_f.htm You will have to wait
until fewer people are logged into the bama ftp server.

Otherwise, and in general, use ham or salt pork to season greens.
The technique of smothering greens can be used with many vegetables;
green beans work especially well. Meat is not necessary every day, don?t
be afraid to alter any dish to vegetarian tastes.

1 premature baby, born dead
Large bunch of mustard greens
2 white onions, 1 cup chopped celery
Vegetable oil (or hog fat)
Salt, pepper, garlic, etc.

Lightly brown onions, celery, garlic and meat in large heavy pot.
Add a little water and the greens (which should be thoroughly cleaned and washed).
Smother slowly for at least 2 hours, adding small amounts of water
when it starts to stick.
Stir frequently.
When ready - serve with rice, grilled smoked sausage, green salad, and iced tea.
Coffee and apple pie then brandy.

Maternity Ward Pot Luck Dinner

If you can?t get anything fresh from the hospital, nursery, or morgue;
you can at least get rid of all the leftovers in your refrigerator.

1 - 2 lbs. cubed meat (human flesh, chicken, turkey, beef...)
1 -2 lbs. coarsely chopped vegetables
(carrots, potatoes, turnips, cauliflower, cabbage...)
Bell pepper
onions
garlic
ginger
salt pepper, etc.
Olive oil
butter

Brown the meat and some chopped onions, peppers, and garilic in olive oil,
place in baking dish, layer with vegetables seasoning and butter.
Bake at 325&#65533; for 30 - 45 minutes.
Serve with hot dinner rolls, fruit salad and sparkling water.

B&#65533;b&#65533; Buffet 1

Show off with whole roasted children replete with apples in mouths -
and babies? heads stuffed with wild rice. Or keep it simple with a
hearty main course such as stew, lasagna, or meat loaf.

Some suggestions

Pre-mie pot pies, beef stew, leg of lamb, stuffed chicken, roast

2 large carrots

This is a simple classic stew that makes natural gravy,
thus it does not have to be thickened.
Brown the meat quickly in very hot oil, remove and set aside.
Brown the onions, celery, pepper and garlic.
De-glaze with wine, return meat to the pan and season well.
Stew on low fire adding small amounts of water and
seasoning as necessary.
After at least half an hour, add the carrots and potatoes,
and simmer till root vegetables break with a fork.
Cook a fresh pot of long grained white rice.

Pre-mie Pot Pie

When working with prematurely delivered newborns (or chicken) use sherry;
red wine with beef (buy steak or roast, do not pre-boil).

Pie crust (see index)
Whole fresh pre-mie; eviscerated, head, hands and feet removed
Onions, bell pepper, celery
&#65533; cup wine
Root vegetables of choice (turnips, carrots, potatoes, etc) cubed

Make a crust from scratch - or go shamefully to the frozen food section
of your favorite grocery and select 2 high quality pie crusts (you
will need one for the top also).
Boil the prepared delicacy until the meat starts to come off the bones.
Remove, de-bone and cube; continue to reduce the broth.
Brown the onions, peppers and celery.
Add the meat then season, continue browning.
De-glaze with sherry, add the reduced broth.
Finally, put in the root vegetables and simmer for 15 minutes.
Allow to cool slightly.
Place the pie pan in 375 degree oven for a few minutes so bottom crust is not soggy,
reduce oven to 325.
Fill the pie with stew, place top crust and with a fork,

children replete with apples in mouths -
and babies? heads stuffed with wild rice. Or keep it simple with a
hearty main course such as stew, lasagna, or meat loaf.

Some suggestions

Pre-mie pot pies, beef stew, leg of lamb, stuffed chicken, roast pork spiral ham,
Cranberry pineapple salad, sweet potatoes in butter, vegetable platter, tossed salad with
tomato and avocado, parsley new potatoes, spinich cucumber salad, fruit salad
Bran muffins, dinner rolls, soft breadsticks, rice pilaf, croissants
Apple cake with rum sauce, frosted banana nut bread sherbet, home made brownies
Iced tea, water, beer, bloody marys, lemonade, coffee

The guests select food, beverages, silverware... everything from the buffet table.
They move to wherever they are comfortable, and sit with whoever they choose.
Provide trays so your guests will not spill everything all over your house from
carrying too much, nor will they have to make 10 trips back and fourth from the
service stations.

Roast Leg of Amputee

By all means, substitute lamb or a good beef roast if the haunch
it is in any way diseased. But sometimes surgeons make mistakes,
and if a healthy young limb is at hand, then don?t hesitate to cook
it to perfection!

1 high quality limb, rack, or roast
Potatoes, carrot
Oil
celery
onions
green onions
parsley
garlic
salt, pepper, etc
2 cups beef stock

Marinate meat (optional, not necessary with better cuts).
Season liberally and lace with garlic cloves by making incisions,
and placing whole cloves deep into the meat.
Grease a baking pan, and fill with a thick bed of onions,
celery, green onions, and parsley.
Place roast on top with fat side up.
Place uncovered in 500° oven for 20 minutes, reduce oven to 325°.
Bake till medium rare (150°) and let roast rest.

Pour stock over onions and drippings, carve the meat and place th

in olive oil till golden brown, remove.
Add the garlic and onions and cook down a bit.
Add some lemon juice and some zest, then de-glaze with stock.
Add a little cornstarch (dissolved in cold water) to the sauce.
You are just about there, Pour the sauce over the cutlets,
top with parsley, lemon slices and cracked pepper.
Serve with spinach salad, macaroni and cheese (homemade) and iced tea...

Spaghetti with Real Italian Meatballs

If you don?t have an expendable bambino on hand,
you can use a pound of ground pork instead.
The secret to great meatballs, is to use very lean meat.

1 lb. ground flesh; human or pork
3 lb. ground beef
1 cup finely chopped onions
7 - 12 cloves garlic
1 cup seasoned bread crumbs
&#65533; cup milk, 2 eggs
Oregano
basil
salt
pepper
Italian seasoning, etc.
Tomato gravy (see index)
Fresh or at least freshly cooked spaghetti or other pasta

Mix the ground meats together in a large bowl,
then mix each of the other ingredients.
Make balls about the size of a baby?s fist
(there should be one lying around for reference).
Bake at 400&#65533;for about 25 minutes -
or you could fry them in olive oil.
Place the meatballs in the tomato gravy, and simmer for several hours.
Serve on spaghetti.
Accompany with green salad, garlic b

Soup

SIDS: delicious in winter, comparable to old fashioned Beef and Vegetable Soup.
Its free, you can sell the crib, baby clothes, toys, stroller... and so easy to
procure if such a lucky find is at hand (just pick him up from the crib and
he?s good to go)!

SIDS victim, cleaned
½ cup cooking oil
Carrots
onions
broccoli
whole cabbage
fresh green beans
potato
turnip
celery
tomato
½ stick butter
1 cup cooked pasta (macaroni, shells, etc.)

Remove as much meat as possible, cube, and brown in hot oil.
Add a little water, season, then add the carcass.
Simmer for half an hour keeping the stock thick.
Remove the carcass and add the vegetables slowly to the stock,
so that it remains boiling the whole time.
Cover the pot and simmer till vegetables are tender
(2 hours approximately).
Continue seasoning to taste.
Before serving, add butter and pasta,
serve piping with hot bread and butter.

Offspring Rolls

Similar to Vietnamese style fried rolls, they have lots of meat
(of course this can consist of chicken, beef, pork, or shrimp).
Who can resist this classic appetizer; or light lunch served with
a fresh salad? Versatility is probably this recipe?s greatest virtue,
as one can use the best part of a prime, rare, yearling, or the

works just as well.
In fact you may want to practice cutting up whole chickens
for frying before you go for the real thing.
Whole chicken is much more efficient and inexpensive than buying pieces.

1 tiny human, cut into pieces
2 cups flour
Onion, garlic
Salt
pepper
garlic powder
cayenne pepper
hot sauce, etc.
Oil for frying

Mix milk, eggs, hot sauce in a bowl, add chopped onion and garlic.
Season the meat liberally, and marinate for several hours.
Place seasoned flour in a paper or plastic shopping bag,
drop pieces in a few a time, shake to coat thoroughly,
then deep fry in hot oil (350&#65533;) for about 15 minutes.
Drain and place on paper towels.

Miscarriage with Mustard Greens

Why waste it? Otherwise, and in general, use ham or salt pork to season greens.
The technique of smothering greens can be used with many vegetables;
green beans work especially well. Meat is not necessary every day, don?t
be afraid to alter any dish to vegetarian tastes.

1 premature baby, born dead

allow to sit for a few minutes.
Saut&#65533; in butter and olive oil until golden brown,
about 6 minutes on each side.

Shish Kababes

As old as the hills, this technique has employed seafood, beef, pork, lamb,
poultry, and vegetables; just about anything can be grilled, and young humans
are no exception!

High quality marinade (Teriyaki and garlic perhaps)
1 inch cubes of tender meat, preferably from the nursery
Onions
bell peppers
Wooden or metal skewers

Marinate the meat overnight.
Get the grill good and hot while placing meat, vegetables, and
fruit such as pineapples or cherries on the skewers.
Don?t be afraid to use a variety of meats.
Grill to medium rare,
serve with garlic cous-cous and saut&#65533;ed asparagus.
Coffee and sherbet for desert then walnuts, cheese, and port.
Cigars for the gentlemen (and ladies if they so desire)!

Crock-Pot Crack Baby

When the quivering, hopelessly addicted crack baby succumbs to death,
get him immediately butchered and into the crock-pot, so that any
remaining toxins will not be fatal. But don?t cook it too long,
because like Blowfish, there is a perfect medium between the poisonous
and the stimulating. Though it may not have the same effect on your
guests, a whole chicken cooked in this fashion is also mighty tasty.

1 newborn - cocaine addicted, freshly expired, cleaned and butchered
Carrots
onions
leeks
celery
bell pepper
potatoes
Salt
pepper
garlic, etc

4 cups water

Cut the meat into natural pieces and brown very well in olive oil, remove, then brown half of the onions, the bell pepper, and celery. When brown, mix ev

Accompany with green salad, garlic bread and red wine.

Newborn Parmesan

This classic Sicilian cuisine can easily be turned into Eggplant Parmesan
If you are planning a vegetarian meal. Or you could just as well use veal -
after all, you have to be careful - Sicilians are touchy about their young
family members...

6 newborn or veal cutlets
Tomato gravy (see index)
4 cups mozzarella, 1cup parmesan, 1cup romano
Seasoned bread crumbs mixed with
parmesan
romano
salt
pepper
oregano
garlic powder
chopped parsley
Flour
eggwash (eggs and milk)
Peanut oil for frying.

Pound the cutlets.
Dredge in flour, eggs, then the bread crumb mixture.
Fry till golden brown in 350° peanut oil.
In a baking pan, place a layer of gravy,
then one of meat, gravy, and cheese.
Another layer each of meat, gravy, and cheese.
Then bake at 350° for 45 minutes.
Serve on hot pasta with romano cheese.

Southern Fried Small-fry

Tastes like fried chicken, which works just as well.
In fact you may want to practice cutting up whole chickens
for frying before you go for the real thing.

Whole chicken is much more efficient and inexpens

found there instead.

8 large cabbage leaves
1 lb. lean ground newborn human filets, or ground chuck
Onions
peppers
celery
garlic
soy sauce
salt pepper, etc
Olive oil
breadcrumbs
Tomato Gravy (see index)

Boil the cabbage leaves for 2 minutes to soften.
In skillet, brown the meat in a little olive oil,
then add onions, peppers, and celery (all chopped finely)
and season well.
Place in a large bowl and cool.
Add seasoned breadcrumbs and a little of the tomato gravy,
enough to make the mixture pliable.
Divide the stuffing among the cabbage leaves then roll.
Place seam down in a baking pan.
Ladle tomato gravy on top,
and bake at 325&#65533; for 30 - 45 minutes.

Umbilical Cordon Bleu

Nothing is so beautiful as the bond between mother and child,
so why not consume it?
Children or chicken breasts will work wonderfully also.

4 whole umbilical chords (or baby breasts, or chicken breasts)
4 thin slices of smoked ham, and Gruyere cheese
Flour
eggwash (milk and eggs)
seasoned bread crumbs
1 onion
minced
salt
pep

Cajun Babies

Just like crabs or crawfish, babies are boiled alive!
You don?t need silverware, the hot spicy meat comes off in your hands.

6 live babies
1 lb. smoked sausage
4 lemons
whole garlic
2 lb. new potatoes
4 ears corn
1 box salt
crab boil

Bring 3 gallons of water to a boil.
Add sausage, salt, crab boil, lemons and garlic.
Drop potatoes in, boil for 4 minutes.
Corn is added next, boil an additional 11 minutes.
Put the live babies into the boiling water and cover.
Boil till meat comes off easily with a fork.

Oven-Baked Baby-Back Ribs

Beef ribs or pork ribs can be used in this recipe,
and that is exactly what your dinner guests will assume!
An excellent way to expose the uninitiated to this highly misunderstood
yet succulent source of protein.

2 human baby rib racks
3 cups barbecue sauce or honey glaze (see index)
Salt
black pepper
white pepper
paprika

Remove the silverskin by loosening from the edges,
then stripping off.
Season generously, rubbing the mixture into the baby?s flesh.
Place 1 quart water in a baking pan, the meat on a wire rack.
Bake uncovered in 250° oven for 1° hours.
When browned, remove and glaze,
return to oven and bake 20 minutes more to form a glaze.
Cut ribs into individual pieces and serve with extra sauce.

Fresh Sausage

If it becomes necessary to hide the fact that you are eating
human babies, this is the perfect solution.
But if you are still paranoid, you can substitute pork butt.

5 lb. lean chuck roast
3 lb. prime baby butt
2 tablespoons each:
salt
black, white and cayenne peppers
celery salt
garlic powder
parsley flakes
brown sugar
1 teaspoon sage
2 onions
6 cloves garlic
bunch green onions, chopped

Cut the children?s butts and the beef roast into pieces
that will fit in the grinder.
Run the meat through using a 3/16 grinding plate.
Add garlic, onions and seasoning

brown, drain on paper towels.

Lemon Neonate

Turkey serves just as well, and in fact even looks a bit like a
well-dressed baby. By the time you turn the child?s breast into
cutlets, it will be indistinguishable. The taste of young human,
although similar to turkey (and chicken) often can be wildly
different depending upon what he or she has consumed during its
10 to 14 months of life...

4 well chosen cutlets (from the breasts of 2 healthy neonates)
2 large lemons (fresh lemons always, if possible)
Olive oil
Green onions
Salt
pepper
cornstarch
neonate stock (chicken, or turkey stock is fine)
garlic
parsley
fresh cracked black pepper

Season and saut&#65533; the cutlets in olive oil till golden brown, remove.
Add the garlic and onions and cook down a bit.
Add some lemon juice and some zest, then de-glaze with stock.
Add a little cornstarch (dissolved in cold water) to the sauce.
You are just about there, Pour the sauce over the cutlets,
top with parsley, lemon slices and cracked pepper.
Serve with spinach salad, macaroni and cheese (homemade) and iced tea...

Spaghetti with Real Italian Meatballs

If you don?t have an expendable bambino on hand,
you can use a pound of ground pork instead.
The secret to great meatballs, is to use very lean meat.

1 lb. ground flesh; human or pork
3 lb. ground beef
1 cup finely chopped onions
7 - 12 cloves garlic
1 cup seasoned bread crumbs
&#65533; cup milk, 2 eggs
Oregano
basil

salt
pepper
Italian seasoning, etc.
Tomato gravy (see index)
Fresh or at least freshly cooked spaghetti or other pasta

Mix the ground meats together in a large bowl,
then mix each of the other ingredients.
Make balls about the size of a baby?s fist
(there should be one lying around for reference).
Bake at 400°for about 25 minutes -
or you could fry them in olive oil.
Place the

are tender
(2 hours approximately).
Continue seasoning to taste.
Before serving, add butter and pasta,
serve piping with hot bread and butter.

Offspring Rolls

Similar to Vietnamese style fried rolls, they have lots of meat
(of course this can consist of chicken, beef, pork, or shrimp).
Who can resist this classic appetizer; or light lunch served with
a fresh salad? Versatility is probably this recipe?s greatest virtue,
as one can use the best part of a prime, rare, yearling, or the
morticians occasional horror: a small miracle stopped short by a
drunk driver, or the innocent victim of a drive-by shooting...

2 cups finely chopped very young human flesh
1 cup shredded cabbage
1 cup bean sprouts
5 sprigs green onion, finely chopped
5 cloves minced garlic
4-6 ounces bamboo shoots
Sherry
chicken broth
oil for deep frying (1 gallon)
Salt
pepper
soy & teriyaki
minced ginger, etc.
1 tablespoon cornstarch dissolved in a little cold water
1 egg beaten

Make the stuffing:
Marinate the flesh in a mixture of soy and teriyaki sauces
then stir fry in hot oil for till brown - about 1 minute, remove.
Stir-fry the vegetables.
Put the meat back into the wok and adjust the seasoning.
De-glaze with sherry, cooking off the alcohol.
Add broth (optional) cook a few more minutes.
Add the cornstarch, cook a few minutes till thick,
then place the stuffing into a colander and cool;
2 hours
Wrap the rolls:
Place 3 tablespoons of stuffing in the wrap, roll tightly -

corner nearest you first, fold 2 side corners in,
wrap till remaining corner is left.
Brush with egg, seal, and allow to sit on the seal for
a few minutes.
Fry the rolls:
325° if using egg roll wraps, 350° for spring roll wraps.
Deep fry

gravy, and cheese.
Then bake at 350° for 45 minutes.
Serve on hot pasta with romano cheese.

Southern Fried Small-fry

Tastes like fried chicken, which works just as well.
In fact you may want to practice cutting up whole chickens
for frying before you go for the real thing.
Whole chicken is much more efficient and inexpensive than buying pieces.

1 tiny human, cut into pieces
2 cups flour
Onion, garlic
Salt
pepper
garlic powder
cayenne pepper
hot sauce, etc.
Oil for frying

Mix milk, eggs, hot sauce in a bowl, add chopped onion and garlic.
Season the meat liberally, and marinate for several hours.
Place seasoned flour in a paper or plastic shopping bag,
drop pieces in a few a time, shake to coat thoroughly,
then deep fry in hot oil (350°) for about 15 minutes.
Drain and place on paper towels.

Miscarriage with Mustard Greens

Why waste it? Otherwise, and in general, use ham or salt pork to season greens.
The technique of smothering greens can be used with many vegetables;
green beans work especially well. Meat is not necessary every day, don?t
be afraid to alter any dish to vegetarian tastes.

1 premature baby, born dead
Large bunch of mustard greens
2 white onions, 1 cup chopped celery
Vegetable oil (or hog fat)
Salt, pepper, garlic, etc.

Lightly brown onions, celery, garlic and meat in large heavy pot.
Add a little water and the greens (which should be thoroughly cleaned and washed).
Smother slowly for at least 2 hours, adding small amounts of water
when it starts to stick.
Stir frequently.

When ready - serve with rice, grilled smoked sausage, green salad, and iced tea.
Coffee and apple pie then brandy.

Maternity Ward Pot Luck Dinner

If you can?t get anything fresh from the hospital, nursery, or morgue;
you can at least get rid of all the leftovers in your refrigerator.

1 - 2 lbs. cubed

continue browning.
De-glaze with sherry, add the reduced broth.
Finally, put in the root vegetables and simmer for 15 minutes.
Allow to cool slightly.
Place the pie pan in 375 degree oven for a few minutes so bottom crust is not soggy,
reduce oven to 325.

then poke holes in top.
Return to oven and bake for 30 minutes, or until pie crust is golden brown.

Sudden Infant Death Soup

SIDS: delicious in winter, comparable to old fashioned Beef and Vegetable Soup.
Its free, you can sell the crib, baby clothes, toys, stroller... and so easy to
procure if such a lucky find is at hand (just pick him up from the crib and
he?s good to go)!

SIDS victim, cleaned
&#65533; cup cooking oil
Carrots
onions
broccoli
whole cabbage
fresh green beans
potato
turnip
celery
tomato
&#65533; stick butter
1 cup cooked pasta (macaroni, shells, etc.)

Remove as much meat as possible, cube, and brown in hot oil.
Add a little water, season, then add the carcass.
Simmer for half an hour keeping the stock thick.
Remove the carcass and add the vegetables slowly to the stock,
so that it remains boiling the whole time.
Cover the pot and simmer till vegetables are tender
(2 hours approximately).
Continue seasoning to taste.
Before serving, add butter and pasta,
serve piping with hot bread and butter.

green salad, and iced tea.
Coffee and apple pie then brandy.

Maternity Ward Pot Luck Dinner

If you can?t get anything fresh from the hospital, nursery, or morgue;
you can at least get rid of all the leftovers in your refrigerator.

1 - 2 lbs. cubed meat (human flesh, chicken, turkey, beef...)
1 -2 lbs. coarsely chopped vegetables
(carrots, potatoes, turnips, cauliflower, cabbage...)
Bell pepper
onions
garlic
ginger
salt pepper, etc.
Olive oil
butter

Brown the meat and some chopped onions, peppers, and garilic in olive oil,
place in baking dish, layer with vegetables seasoning and butter.
Bake at 325° for 30 - 45 minutes.
Serve with hot dinner rolls, fruit salad and sparkling water.

B°b° Buffet 1

Show off with whole roasted children replete with apples in mouths -
and babies? heads stuffed with wild rice. Or keep it simple with a
hearty main course such as stew, lasagna, or meat loaf.

Some suggestions

Pre-mie pot pies, beef stew, leg of lamb, stuffed chicken, roast pork spiral ham,
Cranberry pineapple salad, sweet potatoes in butter, vegetable platter, tossed salad with
tomato and avocado, parsley new potatoes, spinich cucumber salad, fruit salad
Bran muffins, dinner rolls, soft breadsticks, rice pilaf, croissants
Apple cake with rum sauce, frosted banana nut bread sherbet, home made brownies
Iced tea, water, beer, bloody marys, lemonade, coffee

The guests select food, beverages, silverware... everything from the buffet table.
They move to wherever they are comfortable, and sit with whoever they choose.
Provide trays so your guests will not spill everything all over your house from
carrying too much, nor will they have to make 10 trips back and fourth from the
service stations.

Roast Leg of Amputee

By all means, substi

pan.
Ladle tomato gravy on top,
and bake at 325&#65533; for 30 - 45 minutes.

Umbilical Cordon Bleu

Nothing is so beautiful as the bond between mother and child,
so why not consume it?
Children or chicken breasts will work wonderfully also.

4 whole umbilical chords (or baby breasts, or chicken breasts)
4 thin slices of smoked ham, and Gruyere cheese
Flour
eggwash (milk and eggs)
seasoned bread crumbs
1 onion
minced
salt
pepper
butter
olive oil

Pound the breasts flat (parboil first if using umbilical
cords so they won?t be tough).
Place a slice of ham and cheese on each, along with some minced onion
then fold in half, trimming neatly.
Dredge in flour, eggwash, then seasoned breadcrumbs;
allow to sit for a few minutes.
Saut&#65533; in butter and olive oil until golden brown,
about 6 minutes on each side.

Shish Kababes

As old as the hills, this technique has employed seafood, beef, pork, lamb,
poultry, and vegetables; just about anything can be grilled, and young humans
are no exception!

High quality marinade (Teriyaki and garlic perhaps)
1 inch cubes of tender meat, preferably from the nursery
Onions
bell peppers
Wooden or metal skewers

Marinate the meat overnight.
Get the grill good and hot while placing meat, vegetables, and

fruit such as pineapples or cherries on the skewers.
Don?t be afraid to use a variety of meats.
Grill to medium rare,
serve with garlic cous-cous and saut&#65533;ed asparagus.
Coffee and sherbet for desert then walnuts, cheese, and port.
Cigars for the gentlemen (and ladies if they so desire)!

Crock-Pot Crack Baby

When the quivering, hopelessly addicted crack baby succumbs to death, get him immediately butchered and into the crock-pot, so that any remaining toxins will not be fatal. But don?t cook it too long, because like Blowfish, there is a perfect medium between the poisonous and the stimulating. Though it may

Crock-Pot Crack Baby

When the quivering, hopelessly addicted crack baby succumbs to death,
get him immediately butchered and into the crock-pot, so that any
remaining toxins will not be fatal. But don?t cook it too long,
because like Blowfish, there is a perfect medium between the poisonous
and the stimulating. Though it may not have the same effect on your
guests, a whole chicken cooked in this fashion is also mighty tasty.

1 newborn - cocaine addicted, freshly expired, cleaned and butchered
Carrots
onions
leeks
celery
bell pepper
potatoes
Salt
pepper
garlic, etc
4 cups water

Cut the meat into natural pieces and brown very well in olive oil,
remove, then brown half of the onions, the bell pepper, and celery.
When brown, mix everything into the crock-pot, and in 6 to 8 hours you
have turned a hopeless tragedy into a heartwarming meal!

George?s Bloody Mary

good old Blood Stew. When a pig is killed, its throat is slit and

those present quaff a cup of hot blood to soften the wintry air.
From the dawn of man to this day, humans have always drunk blood!
American deer hunters are a prime example.

1 pint blood
Stolichnaya vodka
ice
tomato juice
lemon
lime
hot sauce
Worcestershire sauce
pickled green bean
celery
green oliv

time consuming, this dish seems to take longer than it actually does;
as the entire house is filled with such a heavenly aroma,
the waiting becomes almost unbearable.

1 whole child, cleaned and de-headed
1 batch cornbread stuffing (see index)
½ cup melted butter

Remove the giblets from the infant and set aside.
Stuff the cavity where the child?s genitals and anus were located
using ½ cup per pound of meat.
Tie the arms flat to the body, then pull the skin flaps up to close the cavity.
Now tie the thighs up tight to hold it all together.
Place breast side up in a large metal roasting pan.
Bake in 325° oven covered for 2 hours.
Remove cover, stick a cooking thermometer deep into one of the
baby?s buttocks and cook uncovered till thermometer reads 190°,
about another hour.

Pro-Choice Po-Boy

Soft-shelled crabs serve just as well in this classic southern delicacy.
The sandwich originated in New Orleans, where an abundance of abortion clinics
thrive and hot French bread is always available.

2 cleaned fetuses, head on
2 eggs
1 tablespoon yellow mustard
1 cup seasoned flour

1 loaf French bread
Lettuce
tomatoes
mayonnaise, etc.

Marinate the fetuses in the egg-mustard mixture.
Dredge thoroughly in flour.
Fry at 375° until crispy golden brown.
Remove and place on paper towels.

# 6478. Re: Looking for manuals: AEA KT-1 keyer, Kantronics UTU

the meat on a wire rack.
Bake uncovered in 250&#65533; oven for 1&#65533; hours.
When browned, remove and glaze,
return to oven and bake 20 minutes more to form a glaze.
Cut ribs into individual pieces and serve with extra sauce.

Fresh Sausage

If it becomes necessary to hide the fact that you are eating
human babies, this is the perfect solution.
But if you are still paranoid, you can substitute pork butt.

5 lb. lean chuck roast
3 lb. prime baby butt
2 tablespoons each:
salt
black, white and cayenne peppers
celery salt
garlic powder
parsley flakes
brown sugar
1 teaspoon sage
2 onions
6 cloves garlic
bunch green onions, chopped

Cut the children?s butts and the beef roast into pieces
that will fit in the grinder.
Run the meat through using a 3/16 grinding plate.
Add garlic, onions and seasoning then mix well.
Add just enough water for a smooth consistency, then mix again.
Form the sausage mixture into patties or stuff into natural casings.

Stillborn Stew

By definition, this meat cannot be had altogether fresh,
but have the lifeless unfortunate available immediately after delivery,
or use high quality beef or pork roasts (it is cheaper and better to
cut up a whole roast than to buy stew meat).

1

I turned on the HT after not using for a while and am getting the message Er 1 flashing and beeping. There is nothing in the manual about this except my own note saying to push F button and D together (clear), then turn radio on. I don't remember this happening but it has been a while since I used this so apparently this happened before. However, it isn't working now. If anyone knows how to rid this of the error, I would greatly appreciate it. Also, it's been connected to my outdoor antenna. Could something have occurred to cause this? All of my connections are intact. I disconnected it and used the alkaline battery pack and still get error message. Thank you.

It sounds like the internal battery is dead. There's a small battery
inside to preserve memory settings, etc. I think you'll need to replace it.

On page 36 of the owners manual are the error codes.
Er1 is indeed the internal lithium battery needing replacement.
You've just lost the ability to store anything in memory.

Easiest thing is to just go to the FCC web site. They have a toll-free number you can call to get info/forms for a call sign change. When I called them, I left my mailing info on voice mail, and about two days later I had an envelope in my mailbox with about 60 pages of stuff for updating my call sign.

(You need FCC Form 605, Schedule D, the Vanity Call Sign Request.)

It's a flood bot, probably driven by message traffic. You post a
message and the program sends out a follow-up, with (in this case)
a recipe in very bad taste involving cannibalism.

I hope it's not from some infectious worm running on everybody's
new Christmas gift. If it is, we're in for a noisy couple of weeks.

Hello OMs.

Does anyone of you own an ampflifier from JRC, model JRL3000F or from Kenwood, the TL933? I am looking for a manual in english or german, I only got it in japanese. Your support would be extremely appreciated.

Tie with butcher string around and across so that he looks like
he?s crawling.
Glaze, then arrange pineapples and secure with cloves.
Bake uncovered in 350° oven till thermometer reaches 160°.

Cajun Babies

Just like crabs or crawfish, babies are boiled alive!
You don?t need silverware, the hot spicy meat comes off in your hands.

6 live babies
1 lb. smoked sausage
4 lemons
whole garlic
2 lb. new potatoes
4 ears corn
1 box salt
crab boil

Bring 3 gallons of water to a boil.
Add sausage, salt, crab boil, lemons and garlic.
Drop potatoes in, boil for 4 minutes.
Corn is added next, boil an additional 11 minutes.
Put the live babies into the boiling water and cover.
Boil till meat comes off easily with a fork.

Oven-Baked Baby-Back Ribs

Beef ribs or pork ribs can be used in this recipe,
and that is exactly what your dinner guests will assume!
An excellent way to expose the uninitiated to this highly misunderstood
yet succulent source of protein.

2 human baby rib racks
3 cups barbecue sauce or honey glaze (see index)
Salt
black pepper
white pepper
paprika

Remove the silverskin by loosening from the edges,
then stripping off.
Season generously, rubbing the mixture into the baby?s flesh.
Place 1 quart water in a baking pan, the meat on a wire rack.
Bake uncovered in 250° oven for 1° hours.

When browned, remove and glaze,
return to oven and bake 20 minutes more to form a glaze.
Cut ribs into individual pieces and serve with extra sauce.

Fresh Sausage

If it becomes necessary to hide the fact that you are eating
human babies, this is the perfect solution.
But if you are still paranoid, you can substitute pork butt.

5 lb. lean chuck roast
3 lb. prime baby butt
2 tablespoons each:
salt
black, white and cayenne peppers
celery salt
garlic powder
parsley flakes
brown sugar
1 teaspoon sage
2 onions
6 cloves garlic
b

perhaps)
1 inch cubes of tender meat, preferably from the nursery
Onions
bell peppers
Wooden or metal skewers

Marinate the meat overnight.
Get the grill good and hot while placing meat, vegetables, and
fruit such as pineapples or cherries on the skewers.
Don?t be afraid to use a variety of meats.
Grill to medium rare,
serve with garlic cous-cous and saut&#65533;ed asparagus.
Coffee and sherbet for desert then walnuts, cheese, and port.
Cigars for the gentlemen (and ladies if they so desire)!

Crock-Pot Crack Baby

When the quivering, hopelessly addicted crack baby succumbs to death,
get him immediately butchered and into the crock-pot, so that any
remaining toxins will not be fatal. But don?t cook it too long,
because like Blowfish, there is a perfect medium between the poisonous
and the stimulating. Though it may not have the same effect on your
guests, a whole chicken cooked in this fashion is also mighty tasty.

1 newborn - cocaine addicted, freshly expired, cleaned and butchered
Carrots

thrive and hot French bread is always available.

2 cleaned fetuses, head on
2 eggs
1 tablespoon yellow mustard
1 cup seasoned flour
oil enough for deep frying
1 loaf French bread
Lettuce
tomatoes
mayonnaise, etc.

Marinate the fetuses in the egg-mustard mixture.
Dredge thoroughly in flour.
Fry at 375&#65533; until crispy golden brown.
Remove and place on paper towels.

Holiday Youngster

One can easily adapt this recipe to ham, though as presented,
it violates no religious taboos against swine.

1 large toddler or small child, cleaned and de-headed
Kentucky Bourbon Sauce (see index)
1 large can pineapple slices
Whole cloves

Place him (or ham) or her in a large glass baking dish, buttocks up.
Tie with butcher string around and across so that he looks like
he?s crawling.
Glaze, then arrange pineapples and secure with cloves.
Bake uncovered in 350&#65533; oven till thermometer reaches 160&#65533;.

Cajun Babies

Just like crabs or crawfish, babies are boiled alive!
You don?t need silverware, the hot spicy meat comes off in your hands.

6 live babies
1 lb. smoked sausage
4 lemons
whole garlic
2 lb. new potatoes
4 ears corn

1 box salt
crab boil

Bring 3 gallons of water to a boil.
Add sausage, salt, crab boil, lemons and garlic.
Drop potatoes in, boil for 4 minutes.
Corn is added next, boil an additional 11 minutes.
Put the live babies into the boiling water and cover.
Boil till meat comes off easily with a fork.

Oven-Baked Baby-Back Ribs

Beef ribs or pork ribs can be used in this recipe,
and that is exactly what your dinner guests will assume!
An excellent way to expose the uninitiated to this highly misunderstood
yet succulent source of protein.

2 human baby rib racks
3 cups barbecue sauce or honey glaze (see index)
Salt
black pepper
white pepper
paprika

R

# 6522. FS: LDG Z-11 Tuner.....

Newsgroup: rec.radio.amateur.equipment

Hello!

I would like to buy a pair of "walkie talkies" to allow myself and
a friend to talk without incurring large cell phone bills.

We are on opposite sides of a town, about 3 to 4 miles apart (although
we will be moving closer soon - around 1 to 2 miles apart).

Please can you recommend a good product or range of products that will
work for this purpose?

Thanks!!

-wgrant909

# 6524. NOS Porcelain 2 pc feedthrough insulators

Comments

HOW TO TURN $6 INTO $6,000!!!!!! READING THIS COULD CHANGE YOUR LIFE! I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, Yeah right, this must be a scam,but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: what have I got to lose except 6 stamps and $6.00, right? Then I invested the measly $6.00. Well GUESS WHAT!!... within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!! Let me tell you how this works and most importantly, why it works....Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy! Suggestion: Read this entire message carefully! (print it out or download it.) Follow the simple directions and watch the money come in! It's easy. It's legal. And, your investment is only $6.00 (Plus postage) IMPORTANT: This is not a rip-off; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are adhered to, you will receive extraordinary dividends. PLEASE NOTE: Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to

the income which is made from people like you and me asking to be included in that list. Here are the 4 easy steps to success: STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper;PLEASE PUT ME ON YOUR MAILING LIST. Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal! Mail the 6 envelopes to the following addresses:

#1)Randall Hines 22 Stature Dr. Newark
DE 19713

#2) Mike Sharrer 921 West State St. Coopersburg PA 18036

#3) Jeffrey Hyun 17414Stark Ave Cerritos,CA 90703

#4) James Adair the third 22 Over Rd. Feasterville PA 19053

#5) TSR Solutions 15907 Golden Eye CT Parker CO 80134

#6) Daryl L. 6063 Roosevelt Blvd Apt# 216 Philadelphia PA 19149

STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list. STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more money you make! This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again. PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way. NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.) So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for

only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business! ---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS---------- Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory. Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list. Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to. Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.) Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one! Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.** Now the WHY part: Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, &quote;what if the plan is played out and no one sends you the money?

So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. Remember: play FAIRLY and HONESTLY and this will really work.

# 6526. Question: good pulse noise blanker?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-12-28 15:45:40 UTC

W.G.-

Walkie-talkies probably won't work reliably over that distance without a relay.
Unless you used two base stations with outdoor antennas, you would need to use
a repeater station that was within range of both.

One alternative is the GMRS service (I think), where some communities have
repeaters set up.

Another alternative would be for both of you to get your Ham Radio licenses.
If you are in an area where a local Ham Radio club has repeaters set up, you
could use them.

Either way, your conversations would not be private, and you would hear others
talking as well. Your best bet may still be a pair of cell phones with a
"friends and family" plan!

It's my home setup. I have an Icom 706 and the DSP and blanker helps
but the pulse noise (maybe s3) is annoying. It appears to be coming
from a neighbor's house.

>from a neighbor's house.

The most effective solution would probably be to enlist your
neighbor's assistance, find the offending device, and figure out some
sort of a noise suppression which could be done at the source.

Fairly common culprits for this sort of periodic impulse noise are
fish-tank heaters (noise occurs when the thermostat turns the heater
on or off), pulse-type electric-fence energizers (partial short
circuits of the "hot" fence wire to ground can cause such noise), and
certain types of battery-charger.

A noise filter which plugs in between the offending device, and the
AC wall socket, may be the least expensive and most effective
solution. If you're on tolerably good terms with your neighbor, and
are willing to pay for the filter (even though dealing with the noise
is technically the neighbor's responsibility), this is the approach
I'd recommend. [I wouldn't recommend actually making any
modifications to the neighbor's equipment yourself, for liability
reasons... just supply a filter and let the neighbor plug it in.]

You could try dealing with the noise at the audio-output level using a
ClearSpeech or similar DSP-equipped speaker system, but my impression
is that these are fundamentally less effective than an IF-based
blanker (which your rig already has).

Thanks for the suggestions Dave. I've never met this neighbor yet, but I do plan to. Kind of a bummer it has to be over a problem!

Your electric fence comments are interesting. It's a very regular, rhythmic pulse every second or so.

Jeff

ClearSpeech speakers probably won't work on this kind of noise. They need
consistent noise to be most effective, not on-off-on-off noise.

I would also check stuff in your house first before going to the neighbor.

# 6538. <<Help>> Icom 735 freq mod question

Newsgroup: rec.radio.amateur.equipment
Date: 2004-12-29 17:58:56 UTC
From: WØCBF <w0cbf@yahoo.com>
Message-ID: <1104343136.783185.86710@f14g2000cwb.googlegroups.com>
Source record: 17940

I recently purchased a used Icom-735. It appears that it has been modified to transmit outside of the ham bands. I don't like this feature and would like to disable it to only xmit while tuned inside the ham bands.

Does anyone have any idea how this mod was performed so I can reverse it.

Thanks
Chuck

The mod for gen/cov tx for the IC-735 involves removing D33 and D34 from the main board. You'll have
to lift the PA module up to do this, locate the diodes and simply snip one end of each. Very simple,
but it's amazing just how many screws need removing in the process!

Actually, he wants to reverse the process, so he'll have to come up
with a suitable replacement diode for D33 and D34, and successfully
solder them in the proper location.

.
I have for sale a Mint Yaesu FL-7000 Solid State HF Amplifier with built in Antenna Tuner. This amp is the later version with the 4 buttons and high SN. It works perfectly and looks brand new. It has been used very little. It comes with the Cable for the FT-1000D Transceiver and the original manual and original
shipping cartons. I don't believe that you will find a nicer one. Price is $1400 plus shipping from 79602. Weight is 66 pounds. Thanks, Charlie Hugg, K5MBX

Actually, he asked how the mod was performed.
If the modifier did it the easy way, s/he clipped one lead of the diodes and pulling them up from
the board. If that's the case, the process to reverse it will be a snap.

And, of course only the original poster would have any clue as to how
the mod was physically performed. None of us would know without
examining his radio.

Sorry Glen. My error. I was forgetting the vintage of the radio and was thinking SMA diodes instead of axial lead ones. With the SMAs, they are usually removed due to difficulty in lifting one end only. The 735 most likely does have those diodes sitting there.... one ended.

Thanks to all who responded.

I found the source - an electric blanket in my neighbor's house! I took my portable shortwave and found the LOUD 1 second pulsing rather quuickly. It's the cheap switching power supply that's the problem. Now I just need to convince them to get another brand (I believe it's made by Perfect Fit - they already have complaints filed with the FCC)

Tell you what, Jeff - if you want to make a friend for life, go buy the guy a nice new electric blanket and swap him. You'll both be happy, and you'll be getting off cheap.

When I went looking for a similar one-second pulse a couple of years ago, I traced it to a neighbor's electric livestock fence. I had never met that guy either, so volunteered to "fix" his fence myself at no cost to him. He cheerfully agreed. To make a long story short, I found 56 corroded, poorly done splices in the fence and it took me two days to fix them all!

Hi all,
I received e-mail this evening telling me that it is nice to have Harry's Homebrew Homepages back again!! They never went anywhere. I know that the number of visitors has declined, but I am still very much alive and kicking.

The URL is http://web.telia.com/~u85920178/

I had assumed that http://web.telia.com/~u85920178/ was so difficult to remember that a few visitors had forgotten me, but over last year I have got a new messageboard at http://amazingforums.com/forum2/SM0VPO/forum.html and introduced a couple of new projects, including a 400mW 88-108MHz PA (works well at 50MHz, 70MHz and 144MHz), and a VHF gain antenna, with calculator, that can be built and tested within about 15 minutes (50MHz to 900MHz - works well on 144-432MHz and 446MHz).

My e-mail address sm0vpo(at)home(dot)se got100's of messages each time I logged on: 95% SPAM. I filled the mailbox and deleted the account from Outlook. After a year of messages bouncing I hope the spammers will have moved on and I can use it again. In the meantime you can write to me on oeieio(at)hotmail.com or the old trusty harryvpo(at)hotmail.com (if the SPAM there continues I may close harryvpo).

New projects for the new year? Yes. Loads of ideas, some already in progress, including:
- Article about static electricity - will include a bit of humour
- Stereo encoder
- Tuneable VHF NBFM Receiver for 145-156MHz
(or any 1MHz chunk from 50MHz to 500MHz)
- Tuneable VHF NBFM transmitter (---ditto---)
- Practical antenna info - how-to, with photo's
- Soldering video (15 minutes VCD) still on the list

BR Harry

To DanJr.

I'm sure you were merely being sarcastic in this comment but it's comments like those that give Amateur Radio Operators a bad name.
If I had an elmer like you, I'd be embarrassed to be anything more than a CB'er.

To Wgrant,

As you have seen in earlier posts, HT's are probably not the best due to the limitations on range. But, if GMRS is available in your area, it could be an option. It does require a license however.

Not to justify anything that this other clown said, but an Amateur Radio license and the use of HAM radio & repeaters you and your friend could easily keep in touch not only just across town but across the globe using many different types of radios and modes.

Please don't be discouraged by some of the "Dinosaurs" in Amateur radio who frown upon those who don't conform to their idea of what Amateur Radio should be like - as history is full of dinosaurs that wouldn't adapt.

Good luck and if you have more questions, PLEASE feel free to post them.

73'
Jim.

# 6566. Has anyone tried the Radio Shack 25A power supply?

Newsgroup: rec.radio.amateur.equipment

Hi all,

I've been looking at the new Radio Shack 25A Switching power supply for the shack. Have any of you tried these out? Can they truly handle 25A continuous duty?

Would you recommend one of these over say an Astron, Trip-Lite or Pyramid?

Thanks!

Jim..

Not familiar with the RS supply, but you want to make sure it is
designed for communications use -- that is, it's RFI- and hash-free,
so it doesn't create interference while you're receiving signals.

I'd go with an Astron, to play it safe.

If I remember right, that power supply was made for R-shack by Samlex,
I do have the Samlex 25, and it works fine on all of my Vhf/Uhf rigs.
I never pushed it to see if it will do a continuous 25A though.
Also I have not noticed any noise or interference from it.

Jim-

Do they have a new one? I purchased one of the old ones at a good price after it was discontinued several months ago.

My experience is that it can deliver rated power (at least for a few minutes), but generates considerably more RFI than two other switchers I have (Icom and MFJ). For use with an HF receiver, you would definitely need an outdoor antenna. I don't know if the RFI extends into the VHF range or not.

The 5-way binding posts it uses are nice, but I had to work at getting the caps off so I could use ring-terminals.

For the money I paid, it would make a nice utility supply. For the Ham Shack, I would prefer a linear supply.

GMRS via a repeater or w/ a pair of directional antenna's may work well, but be aware you will need an FCC GMRS license (and your friend will also, unless he is family, as defined in the FCC GMRS rules). The license is $75 and is good for 5 years IIRC. GMRS (General Mobile Radio Service) is very similar to unlicensed FRS (Family Radio...), but you have more channels than FRS, share some w/ FRS, are allowed to use alternate antennas on the radio, antennas w/ gain, repeaters and can use more RF power. Both FRS and GMRS are in the UHF band (462 MHz).

The other option to look at is amateur "ham" radio. Here yopu and your friend will each need an amateur radiio license (Technician class is enough, $12 (or soon $14/$15?) multiple choice test, no morse code test (for the Tech class lic.) and is good for 10 yrs. Here you'd likely use a "2 meter" (146 MHz VHF) or perhaps "70cm" (445MHz UHF) radio, either with an external antenna or an antenna on the radio.In populated areas repeaters are common, perhaps more common than GMRS repeaters, or you can talk directly, as w/ GMRS. The two, GMRS and ham should be similar in performance. Look at both, see which makes the most sense for you.

See also: http://www.popularwireless.com/ for more on GMRS in particular and FRS/CB/amateur/etc. in general. Another option might be MURS (a VHF radio system, fairly new) but I am not up on the FCC rules and the equipment is not yet common I believe.

For you the only downside to GMRS I see is license cost. OTOH you can also talk to anyone nearby w/ a FRS radio, might be handy.

For Ham radio look for the book "Now you're Talking" at RadioShack or other, the Tech test (35 multiple choise questions, 28 to pass) is not very hard, and if you like to tinker a bit too amateur radio can be a lot of fun.

If I could get one for a free eval, I could load-test it and find out. I've got the equipment to do so.

> Would you recommend one of these over say an Astron, Trip-Lite or Pyramid?

Not right off the cuff, no. I would want to take a very close look at the design of the supply, how much of a fudge-factor was worked into it, and generally how well it's built.

I cannot, however, discount the possibility that the same factory that makes the Astrons, Tripp-Lites, and Pyramid units also made Radio Shack's. That sort of thing has happened many times before (GRE made some of their scanners, Kenwood made some of their stereo gear), and I fully expect it to happen again.

Keep the peace(es).
